are you using? I've been looking at this but was really worried about how reliable it would be and I had heard of delays and bad quality. But it sounds like you like it! Thanks

>If he's using external sound modules, he needs to route the audio from the module to an input on his sound card, then enable an audio track in Cakewalk to record it.

If he's using the internal sound card for audio, there are shareware programs that will capture the audio at the sound card output and convert it to WAV.

There may be better solutions, but those are the first two that pop into my mind.
