encountering a few little snags that make me consider my buddies' suggestion. This said, he WAS impressed by the sound of my setup!

I question whether a rookie like myself should tackle Paris, unsupported, except perhaps by this wonderful family that you guys are, which is significant, especially w. archives available. I do have the B.T. DVD.

Prayer-thoughts for the Gulf Coast as Rita approaches.

KimCould be something simple like a video card, battery or a power supply. I get it looked at by Apple.

Let us know how things work out.

James

br />

The E6, sounds as good as many of your studio mics, and will \*murder\* most common dynamic vocal mics.

good luck

DCThat EMU is certainly a great sounding card, and matched with Nuendo will make a formidable system.

The Emu has onboard fx processing also, like the Paris EDS card.

>Hi to everyone...

I was trying the Senderella thing under Me.

The only way that works great is using the EDSTransfer=8,16 thing.

Note that it also works with 8,8 but this setting is not stable , you get disk errors "too slow" things etc.

Things work very stable with that EDSTransfer setting and senderella newest version can now save its sttings along with saving Paris song.

So now you can have your bus system inside Paris you always wanted.

There no latency at all (0) when using senderella so you can use your favoured DX plugin or EDS effect to effect your submix buss.

You can also have a stereo bus summing -effecting thing using two senderella instances.

I use of course chainer to load senderella but I am surte it can be used without chainer.

Someone has mentioned several times on this forum that the EDSTransfer might get EDS cards working hotter thus producing more heat.

I would like to know from you who used to use the EDSTransfer

Any suggestions ?

Regards,

DimitriosNote that under Me the senderella thing has some problems with timing !

Under XP though it is very solid the timing thing.

So senderella is only usable (in my system ) only under XP with 0 latency and perfect timing in summing audio tracks, you need though to put 8,16 or 8,8 in Paris cfg for EDSTransfer.

I use 8,16

Regards,

Dimitrios

>Hi,

That was tough.

You copy your drumtracks to the same EDS card.,  
say you have your kick ,snare and stereo OH's.

So you copy these on empty tracks.

then you put the senderella on each of the first set of drumtracks and  
redirect inside senderella so that the sending audiotrack does not output  
any audio.

you nudge these tracks by 4096 samples forward using any method known if you  
use Soinaudio wrapper for UAD1, if you use FXpansion you nudge for 16384  
samples.

Then on your reciving audio tracks (you put empty audio file (24bit track)  
just after the senderella audio tracks.

I mean if kick is 1 snare 2 OH's 3 & 4 then put the receiving senderella  
track on channel 5 and just put the copies of 1,2,3&4 on 13,14,15,16  
The remaining drumtracks could stay on 7,8,9,10,11,12 if you have that many.  
So now the senderella return on 5 takes the LA2 UAD1 compressor and time  
aligns with audio drumtracks 13,14,15&16 and as well with 7,8,9,10,11,12.

I have also a UAD1 but I would prefer using the Sonalksis which is 0 latency  
so I don't have to copy and move, anyway here is a working solution

Regards,

Dimitrios
