---=_linux4640a159--The book is a page turner in the Clancy tradition and not apocalyptic
nor about guns. Someone used the mention of guns to change
the subject. The book almost predicts the rise of people like the
mook who was the subject of the article I linked. The book is a great
read. Solid adventure writing.

>

>Well how do you know, really? You just believe

>> it.

No humanity = no one to believe anything. Therefore believing in the benefit of human extinction is a pernicious irrationality and a conceit intended to prove one's own moral standing while knowing it is all a sham.

We have not come anywhere close to overpopulating anything, and Malthus was discredited generations ago.

>Having inhabited this place for well over half a century, I can go back to

>places that I knew 40 years ago and look at what has happened since then and

>see it for myself.

You see changes you do not like. Man, remember the freeways out here? It was way better in '63, trust me. This does not constitute overpopulation because we don't like it.

Since '63, we have done stupid stuff like build metro-link rail systems that even when full, use more fuel and pollute more than cars to carry the same number of people...

Oh and we HAD to have a new LA subway that is way under-used while the freeways have been neglected for 30 years...

Ideology corrupting policy.

We have had successes too. The cars are so clean today that the air here is actually better than in the 1970's when there were far fewer people.

>Don, you have known me for quite a while and I think you could say that

>difference if other parts of the world don't do the same is certainly a

>valid question, but since we are *free market* kinda' folks, if we did

>develop new technologies, we could market them.

Well, you know where the next logical move is, don't you? Since the

enviros, yuppies and NIMBY's won't let us build drilling platforms or refineries, and photovoltaics cost more to make and install than the power they replace, while sh*theads like Ted Kennedy won't even allow windmills to "blight" their view, and our deadbeat president will NOT do anything to force the development of new resources?

You know what's coming don't you? That's right. Nuclear plants... Or, we can kill a couple of billion people off.

Great evil is always just below the surface of all demagogues, be they left or right.

Yes, things can get worse. A lot worse.

>Hmmm.....I don't feel guilt ridden at all. I just see things as I think

>they are. I also don't think humans are inherently evil. Too many horses

>will overgraze a pasture and turn it into a wasteland. Too many rats in an

>enclosed space will result in all sorts of aberrant behaviour, finally

>ending in some major *ratricide*.

Funny, the "rats" in NYC seem to be doing fine. No ratricide at all. Hell, even Calcuttans seem to get along most of the time. Maybe, umm, we're just not rats? I think your model lacks some sophistication here...

>I also believe that we should allocate a few

>manliness.

>
>;o)

You know, I tried and tried to become a vegetarian. I really believe in it.

I would like my lunch to not involve this:

<http://www.meat.org/>

wouldn't you?

Are you a vegetarian? If not, the system you support with your money and choices is far, far worse than hunting. The hunters I have known have been honorable people. I have no use for it myself, but I believe that it should continue as long as there is meat for sale.

DCA friend sent me this... heh heh

Here's a prime example of "Men are from Mars, Women are from Venus" offered by an English professor from the University of Colorado for an actual class assignment:

The professor told his class one day: "Today we will experiment with a new form called the tandem story. The process is simple. Each person will pair off with the person sitting to his or her immediate right. As homework tonight, one of you will write the first paragraph of a short story. You will e-mail your partner that paragraph and send another copy to me. The partner will read the first paragraph and then add another paragraph to the story and send it back, also sending another copy to me. The first person will then add a third paragraph, and so on back-and-forth. Remember to re-read what has been written each time in order to keep the story coherent.

There is to be absolutely NO talking outside of the e-mails and anything you wish to say must be written in the e - mail. The story is over when both agree a conclusion has been reached." The following was actually turned in by two of his English students: Rebecca and Gary.

THE STORY:

(first paragraph by Rebecca)

At first, Laurie couldn't decide which kind of tea she wanted. The chamomile, which used to be her favorite for lazy evenings at home, now reminded her too much of Carl, who once said, in happier times, that

he liked chamomile. But she felt she must now, at all costs, keep her mind off Carl. His possessiveness was suffocating, and if she thought about him too much her asthma started acting up again. So chamomile was out of the question.

(second paragraph by Gary)

Meanwhile, Advance Sergeant Carl Harris, leader of the attack squadron now in orbit over Skylon 4, had more important things to think about than the neuroses of an air-headed asthmatic bimbo named Laurie with whom he had spent one sweaty night over a year ago. "A.S. Harris to Geostation 17," he said into his transgalactic communicator. "Polar orbit established.

No sign of resistance so far..." But before he could sign off a bluish particle beam flashed out of nowhere and blasted a hole through his ship's cargo bay. The jolt from the direct hit sent him flying out of his

seat and across the cockpit.

(Rebecca)

He hit his head and died almost immediately, but not before he felt one last pang of regret for psychically brutalizing the one woman who had ever had feelings for him. Soon afterwards, Earth stopped its pointless hostilities towards the peaceful farmers of Skylon 4.

"Congress Passes Law Permanently Abolishing War and Space Travel," Laurie read in her newspaper one morning.

The news simultaneously excited her and bored her. She stared out the window, dreaming of her youth, when the days had passed unhurriedly and carefree, with no newspaper to read, no television to distract her from her sense of innocent wonder at all the beautiful things around her.

"Why must one lose one's innocence to become a woman?" she pondered wistfully.

(Gary)

Little did she know, but she had less than 10 seconds to live. Thousands of miles above the city, the Anu'udrian mothership launched the first of its lithium fusion missiles. The dimwitted wimpy peaceniks who pushed the Unilateral Aerospace disarmament Treaty through the congress had left Earth a defenseless target for the hostile alien empires

who were determined to destroy the human race. Within two hours after the passage of the treaty the Anu'udrian ships were on course for Earth,

carrying enough firepower to pulverize the entire planet. With no one to stop them, they swiftly initiated their diabolical plan. The lithium fusion missile entered the atmosphere unimpeded. The President, in his top-secret mobile submarine headquarters on the ocean floor off the coast of Guam, felt the inconceivably massive explosion, which vaporized poor, stupid Laurie.

(Rebecca)

This is absurd. I refuse to continue this mockery of literature. My writing partner is a violent, chauvinistic semi-literate adolescent.

(Gary)

Yeah? Well, my writing partner is a self-centered tedious neurotic whose attempts at writing are the literary equivalent of Valium. "Oh, shall I have chamomile tea? Or shall I have some other sort of F-- KING TEA???" Oh no, what am I to do? I'm such an air headed bimbo who reads too many Danielle Steele novels!"

(Rebecca)

As*h@le.

(Gary)

B*tch!

(Rebecca)

F**K YOU - YOU NEANDERTHAL!!

(Gary)

In your dreams, Ho. Go drink some tea.

(TEACHER)

A+ - I really liked this one "Chris Lang" <yo@yo.yo> wrote:

>> We have not come anywhere close to overpopulating anything

```

I disagree with this. There aren't that many places on this planet that are really favorable for us. These areas must have a water supply, first and foremost. From water comes everything else, if there is adequate and favorable surrounding land to grow food. At this point, you can eliminate approximately 95% of the earth's surface from our life support system without using some sort of technology to change this...which we have done. Thing is, when we do this, we start jacking around with the life support

system that lots of other species depend on for their existence as well. Some of these species regulate the environment that we must have in order to survive. If we jack around with the fundamental life support system by thinking we can alter it for our own purposes, we are pissin' in the wind.....and yeah, I know that the entire population of the earth could fit in New Jersey if they stood shoulder-to shoulder.....though I know some Jerseyites that might object.
;o)

> You see changes you do not like. Man, remember the freeways out
> here? It was way better in 63, trust me. This does not constitute
> overpopulation because we don't like it.

Perhaps not.....but it does constitute a lower quality of life for most everyone, which produces stress, which contributes to the degradation of just about any living organism.

>
> Since '63, we have done stupid stuff like build metro-link rail
> systems that even when full, use more fuel and pollute more than cars
> to carry the same number of people...

Hehehe!!.....but hey!!!!.....it's PC so at least everyone can share the commonality of the fuckup. Group hug? ;o)

> Oh and we HAD to have a new LA subway that is way under-used
> while the freeways have been neglected for 30 years...

Well, of course....but if you guys can get a bunch of wooden desks down there to hide under, you can use it for an air raid shelter when the Rooskies bomb us. Remember that?

;o)

>
> Ideology corrupting policy.
>
> We have had successes too. The cars are so clean today that the air here
> is
> actually better than in the 1970's when there were far fewer people.
>

Remember when we were driving down the Hollywood freeway with the top down last year? I thought I was going to suffocate from the fumes. Now think about how much nicer that would have been if those *other* folks would have been riding the metro or subway.

>

Agreed. If we kill all the lawyers, they won't be able to survive. that
might be a good starting point.

>
> You know what's coming don't you? That's right. Nuclear plants...
> Or, we can kill a couple of billion people off.

Now you're starting to get my drift. A couple billion won't do it though. I
think mother nature has a few surprises in store for us. We've got a new,
improved batch of bugs now with frequent flyer miles and they're coming soon
to a theatre near you.

> Great evil is always just below the surface of all demogogues, be they
> left or right.
>
> Yes, things can get worse. A lot worse.

I don't think this guy's philosophy is evil. It's just pragmatic. I don't
see it happening in any kind of *actionable* scenario.....not while I've
got firearms at my disposal.....which might be just the ticket. If
everyone had firearms and we get pissed off enough, statistically, half of
us are toast anyway. It's a start at least and we can at least do the right
thing and take responsibility for it. We can even find a religious loophole
to justify it, I'betcha'.

> Funny, the "rats" in NYC seem to be doing fine. No ratricide at all.
> Hell,
> even Calcuttans seem to get along most of the time. Maybe, umm, we're
> just not rats? I think your model lacks some sophistication here...

Well, that's because there are plenty of people there to keep them well fed.
We, OTOH, occasionally require liebenstraum, but in only the best places, of
course.

>
> You know, I tried and tried to become a vegetarian. I really believe in

>
> wouldn't you?

Yes.

> Are you a vegetarian?

No.

If not, the system you support with
> your money and choices is far, far worse than hunting.

Agreed. This system needs to change in a big way. In order to avoid these horrors, we will need lots more land for agricultural grazing, etc, which takes it out of the moneymaking/development/living space cycle. Can't have that now can we? Where would we all live? If there were fewer people, there might be fewer protein factories. Being naturally omniverous creatures, I can't really see the earth's population going vegan. Less humans=more humanity?

The hunters I

> have known have been honorable people. I have no use for it myself, but

I think you have your percentages way off, and where does the idea come from that we are not supposed to use technology? We were -designed to design things-. The idea that we are apes with big brains who, if we were not so uppity, would be living in tipis and dying at 27 is utter rubbish.

I guess it depends on where you are coming from...

>Thing is, when we do this, we start jacking around with the life support

Well we have to be careful don't we? But we are supposed to be stewards, not servants of the earth. Too many enviros are Gaian lunatics.

Would you settle for fusion plants, hydrogen cars, and careful nuclear waste storage?

Technology has had undeniable benefits and has solved thousands of the scourges of humanity that our ancestors died from. Now, we are in the stage of learning how to balance things out. Hell, there are lakes in Russia that are so radioactive that they will kill you in 30 minutes of exposure...

Ain't it a bit disingenious for US of all people, these big-brained audio engineers and computer people, to be whining about technology? Seems silly to me. We do need to make wise decisions and often do not, but I will tell you this much; I believe that testing H-bombs in the atmosphere was really stupid and that we are also stupid today when we won't let a family build a house because someone found a fungus-loving spotted dung beetle somewhere near the property. Also, notice that those prohibiting the new house ALWAYS have their nice little Ranchette already, don't they?

>.....and yeah, I know that the entire population of the earth

I like subways a lot... But subways are a reality, not an idea, and the reality has to *work* dammit... They are finally getting serious about fixing the freeways out here, but it is too little too late to prevent horrible commutes for people. CA used to have the best drivers in the country. Now, it's just idiots playing bumper cars.

>Well, of course....but if you guys can get a bunch of wooden desks down

It would have been worse. Metrolink, even when full, pollutes MORE than the number of cars needed to carry those people...

If we want to accomplish what you have in mind, the rail system must be electric, not diesel and that means nuclear plants...

>Now you're starting to get my drift. A couple billion won't do it though.

I

Yeah, and the idea that this is Gaia's Revenge is the result of

waay too much LSD...

Epidemics tend to be self-limiting. Remember the anthrax scare?

>I don't think this guy's philosophy is evil. It's just pragmatic. I don't

>see it happening in any kind of *actionable* scenario

I think he is certifiable and has brainwashed himself to hate his own kind. Those sort love all animals except humanity, and given power will kill as many of us as they can.

>It's a start at least and we can at least do the right

>thing and take responsibility for it. We can even find a religious loophole

>to justify it, I 'betcha'.

Be clear on one thing. Christians believe the end of the world is not something we can stop. We need to try to, since we do not know when it will be, and we need to always be good stewards of the earth, and we need to NEVER try to bring about war or any other misery to try to assist God to fulfill prophecy, (what an absurd idea!). You are right though, people will try to find a religious justification for their own evil and have done so many times.

>Well, that's because there are plenty of people there to keep them well fed.

Ain't technology cool?

As always, how do we get there? The euros are committing cultural suicide with 1.1 babies per couple and many do not bother with marriage, while the muslim immigrants have 4.5.

See where this is heading?

The new clothing store; Burqa Bob's!

Our prices are INSANE!!

>Please reread my post. I'm talking about *trophy* hunters.

I dunno. I don't want a bunch of dead animal heads on the wall, (I do have a pair of Louie Bellson's drumsticks up there though) but I doubt that most hunters are jerks. I don't know many, admittedly.

D<http://www.youtube.com/watch?v=Qehxjub5lyo>>>Are you a vegetarian?
>

BUT if we all become vegetarians, global warming would increase!!!
Think about it...The source of our CO2 control would be our main course.
Greenhouse gases would increase the more we ate. Herds of cattle and flocks of chickens would decrease, thereby further reducing the available fertilizer which help grow... you guessed it, the plants that protect us from greenhouse gases.

;-P

HoovLOL.

If we eat all of the plants, global warming will be the least of our worries. Good thing plants are renewable...

Cheers,
-Jamie

>person will then add a third paragraph, and so on back-and-forth. Remember
>to
>re-read what has been written each time in order to keep the story
>coherent.
>
>There is to be absolutely NO talking outside of the e-mails and
>anything you wish to say must be written in the e - mail. The story is over
>when both agree a conclusion has been reached." The following was actually
>turned in by two of his English students: Rebecca and Gary.
>
>
>
>THE STORY:
>
>(first paragraph by Rebecca)

>
>At first, Laurie couldn't decide which kind of tea she wanted. The
>chamomile, which used to be her favorite for lazy evenings at home,
>now reminded her too much of Carl, who once said, in happier times, that
>he liked chamomile. But she felt she must now, at all costs, keep her
>mind off Carl. His possessiveness was suffocating, and if she thought
>about him too much her asthma started acting up again. So chamomile
>was out of the question.
>
>
>(second paragraph by Gary)
>
>Meanwhile, Advance Sergeant Carl Harris, leader of the attack squadron
>now in orbit over Skylon 4, had more important things to think about than
>the neuroses of an air-headed asthmatic bimbo named Laurie with whom he
>had spent one sweaty night over a year ago. " A.S. Harris to Geostation
>17," he said into his transgalactic communicator." Polar orbit established.
>
>No sign of resistance so far..." But before he could sign off a bluish
>particle beam flashed out of nowhere and blasted a hole through his
>ship's cargo bay. The jolt from the direct hit sent him flying out of his
>
>seat and across the cockpit.
>
>
>(Rebecca)
>
>He hit his head and died almost immediately, but not before he felt
>one last pang of regret for psychically brutalizing the one woman who
>had ever had feelings for him. Soon afterwards, Earth stopped its
>pointless hostilities towards the peaceful farmers of Skylon 4.
>"Congress Passes Law Permanently Abolishing War and Space Travel,"
>Laurie read in her newspaper one morning.
>The news simultaneously excited her and bored her. She stared out the
>window, dreaming of her youth, when the days had passed unhurriedly
>and carefree, with no newspaper to read, no television to distract her
>from her sense of innocent wonder at all the beautiful things around her.
>
>"Why must one lose one's innocence to become a woman?" she pondered
>>wistfully.
>
>
>(Gary)
>
>Little did she know, but she had less than 10 seconds to live.
>Thousands of miles above the city, the Anu'udrian mothership launched
>the first of its lithium fusion missiles. The dimwitted wimpy peaceniks

>who pushed the Unilateral Aerospace disarm ament Treaty through the
>congress had left Earth a defenseless target for the hostile alien empires
>
>who were determined to destroy the human race. Within two hours after
>the passage of the treaty the Anu'udrian ships were on course for Earth,
>
>carrying enough firepower to pulverize the entire planet. With no one
>to stop them, they swiftly initiated their diabolical plan. The lithium

>fusion missile entered the atmosphere unimpeded. The President, in his
>top-secret mobile submarine headquarters on the ocean floor off the
>coast of Guam, felt the inconceivably massive explosion, which
>vaporized poor, stupid Laurie.
>
>
>
>(Rebecca)
>
>This is absurd. I refuse to continue this mockery of literature. My
>writing partner is a violent, chauvinistic semi-literate adolescent.
>
>
>(Gary)
>
>Yeah? Well, my writing partner is a self-centered tedious neurotic
>whose attempts at writing are the literary equivalent of Valium. "Oh,
>shall I have chamomile tea? Or shall I have some other sort of F-- KING
TEA???"
>Oh no, what am I to do? I'm such an air headed bimbo who reads
>too many Danielle Steele novels!"
>
>
>(Rebecca)
>
>As*h@le.
>
>
>(Gary)
>
>B*tch!
>
>
>(Rebecca)
>
>F**K YOU - YOU NEANDERTHAL!!
>
>
>(Gary)

ROTFLMAO!!!! That's classic!!

pabHey, thanks for the accidental purchase of Wayward. I hope you weren't hurt. :)

Yes, it was recorded and mixed in its entirety in PARIS using actual human being musicians, 99% midi-free. (the 1% is the occasional click provided by Cubase). Hope you like it. :)

Sarah

---=_linux464120a2--Jamie, cut the crap, man. If you're trying to say that everything in that video is bunk you're just completely biased. These are real scientists putting their names on the line. Of utmost relevance is that solar activity has a direct correlation with climatic temperature increases. Global warming is occurring obviously, but there is little evidence to support human CO2 production as the source. If you're trying to say that these disagreeing scientists and experts such as Professor Phillip Scott: Dept. of Biogeography, U. of London, Prof. Patrick Michaels: Dept. of Env. Sci. U. of VA, Nigel Caulder: former editor for the New Scientist, Patrick Moore: co-founder of Greenpeace, Prof. Richard Lindzen: IPCC & MIT, Prof. Paul Reiter: IPCC & Pasteur Inst. Paris, Prof. Ian Clark: Dept. of Earth Science, U. of Ottawa, Prof. John Christy: Lead author of IPCC report, to name a few are full of it, then you've got balls. They all disagree with the panel's findings. They weren't coerced or misled, that's nonsense. Scientists may disagree but to disregard the opposing argument as non science is just plain non scientific and fascistic.

Still just keeping it real,
Rich

the mobo I'm planning on getting has both PCI and PCI-X busses.

I could use one of these for my RME cards in a PCI-X slot.

<http://www.circotech.com/2u-3-x-64-bit-3-3v-pci-x-133mhz-riser-card-with-11cm-flex-cable.html>

....and daisy chain two more of them (which would provide 5 x PCI slots and hang them off the PCI slot for my 4 x UAD-1 cards and have an extra slot left on the same bus for something else like a POCO maybe.....at least I think I can as long as the host card has compatible voltage keying.

It would certainly be worth a try. 3 of these 2U riser cards would be under \$200.00.

Yeah..I've definitely got to look into this. Some of this stuff might save you Parisites some scratch if you're not wanting to buy a Magma (and I will be selling three of the 13 slot models if this works)

;o)Hey, Rich, what I'm saying is crystal clear. The "Swindle" video is an admitted polemic. An exercise in sensationalism. It is not an objective look at the topic and shouldn't be taken as such.

Show me the data that supports the theory that the current warming spike is caused by solar gain. To the contrary, there are measurements that show there is NO such sudden increase from the sun to match our recent rising earth average temperature.

OTOH, to claim there is little evidence that humans are contributing is to ignore significant evidence.

I have to go with the evidence on this one. To keep it real is quite literally to go with the evidence.

To expect that all scientist will agree completely is to miss the point of science. Scientists constantly disagree on major and minor points. Some of them are always going to be wrong or partly wrong, but they all contribute by questioning the conclusions and, if they are serious, putting them to the test with further studies.

Now, after decades of studies, there is sufficient data to support the conclusions that A) there is measured global warming occurring now, B) it's beyond what we would expect from known natural cycles and sources and C) human contributions can account for a clear contribution.

Take a topic in science and you will likely be able to assemble a list of scientists with varying credibility (like the one below) who have large or small disagreements with the consensus. But look further and you'll find a much, much longer list of scientists completely or mostly agreeing with the consensus on human contributions to the current global warming. If you want to hitch your position to an appeal to authority, why limit yourself to the short list?

If you think it takes "balls" just to see the actual facts, then talk to the Governor in CA who has already moved on global warming. If you believe basing conclusions about our physical Earth on published science is "biased" then I'll accept a bias toward reality.

At any rate, what matters is who is seeing most clearly. Who is working from the data. Who has done the peer-reviewed studies. And where the preponderance of evidence leads.

It leads to the mainstream consensus, that's how scientific consensus

forms. But this consensus is something the "Swindle" video seems to have gone out of its way to misrepresent and ironically demonize. Even to the extent of deliberately misrepresenting the views of at least one of the scientists they interviewed. If you're going to call something crap, why not start with that?

Cheers,
-Jamie

Is this what it looks like ??
A magma without a magma ?
Does this riser means extender ?
If I conclude correctly you just put a pci riser on a pci slot (32bit still here !) and get yourself two pci slots that share the ame IRQ ?
Means that motherboard identifies two pci cards as if this pci slot had a brother (or sister) ?
Wow if so that is something !!!
Dear DJ what is needed for an extra 2-3 pci slots on a P2B Asus motherboard that already has 5 pci slots ?
Only two riser 32bit cards ?
Thanks
Dimitrios !

Ok what case would someone need to have this added on a dense motherboard
?

Ok hold on the mytek and paris out card until I get two of those too !!

Well this is a must have for a Paris user !!
Can anyone commend if this would work with a Paris ?
Regards,
DimitriosDJ,
From what I read it cannot probably work as wished...

These are to just raise the height of the pci slot.
I wish if this work.
Will you try one for us ?
Regards,
Dimitrios

DimitriosCan you tell which slots have shared IRQs? That's always been a limit on usable slots.

JohnHi John,

Does it matter with Paris ?

If all pci slots are reserved for eds cards what is wrong with pci sharing ?

This fantastic looking motherboard has onboard graphics card 1GB lan and usb2.0 on 8 ports.

Well it costs almost as a used Magma 7 pci extender so maybe we are just talking here...

No, South Gate. SoCal is the home of the wonderful Kustom car culture and Rat Fink is the king.

Do they not have Finks over there? R.F. is the coolest guy in the world. I probably look more like him than you would think...

The IRQ sharing will matter because if USB, AGP, LAN, LPT, etc.. share with a slot(s) there can be problems. Say for instance that the video is hard coded to the same IRQ that 3 slot are on - that would be bad. I'd also be concerned of power supply throughput, EDS cards love lots of power. The video situation concerns me.. onboard sucks, and I see no PCI-e or AGP to expand it, although there is some kind of PCI Ex1 slot listed?

But the mobo looks veeeddddddy interesting, Mr Bond.

I love where this and the one DeeJ posted is going. I'm not sure that it'll work though, I've seen these kinds of riser cards all over old Compaq's and HP's and some IBM's. Not sure how Paris happy they'll be but I'd sure like to see someone try 'em out.

You can pm me at rlincoln@kc.rr.com

Rod The issue here will be whether a PCI>PCI bridge is necessary. Theoretically, if the devices are good with sharing the same IRQ, the bridge shouldn't be an issue. I will be calling them in a few minutes. They open at 8:30 PDT. If it looks like this will work, I will be ordering three of these (1 x for my HDSP cards and 2 x for my UAD-1 cards. I wish the ribbon cables were a bit longer. 11cm looks like the longest available.

Actually, Rat Fink and the whole Ed Roth era was in the 1960's.

DCHehheh!!! This ain't gonna work. These devices are designed to mirror mobo slots. They have extra blades that must be inserted into the mobo in order to work. Of course, I think it would be possible to daisy chain a bunch of them together and loop their extra blades of each riser card back into the slots on the next riser card, thus directing all PCI bus traffic from one card to the next instead of to the extra mobo slots. I decided to have some fun and got the tech support people at this company all freaked out when I told them that I was going to try this and asked what their return policy was. Calls were made from lower tier to upper tier techies within the heirarchy. They were genuinely alarmed. I don't think they will forget me for a while.

I love the smell of burning PCB in the morning.

;o)

> Dimitrios

Heh!...I still think there might be a way to make this work, but it might cost just about as much as it would cost to buy the damn 64 bit GE Fanuc expansion chassis I've been looking at.

I'm going to look into building a 64 bit expansion chassis using a backplane, PSU and host cards. I've got an old Magma case here with a dead back-plane. It's ATX, but the back of it would have to be modifiedI'm thinking chain saw and dynamite.

Here's a link to a 32 bit DIY but it's ridiculously expensive considering the fact that we can buy 13 slot Magma's for less these days.

http://www.cyberresearch.com/store/computer-accessories-pc-peripherals/bus-adapters-expansion-chassis/PRO_600_3227.2.htm

I called them and told them what I wanted. They told me that I could e-mail the specs of the box that I needed and they could have one built. This would likely cost the same as the GE Fanuc (formerly SBS) 64 bit chassis so that's a dead end.

Surely there's a 64 bit option that can be sourced somewhere.

;o)I bought my computer rack case from these guys a couple of years ago. They were pretty on the ball.

There's a switch on the back that sets the unit to calibrated (the up
position) or variable (the down position). If it's set to calibrated, the
volume pot has no effect on the output levels of the XLR or RCA though the
front headphone outs will still be controlled by the volume pot. If it's set

to variable, the XLR and RCA outputs will be controlled by the volume pot along with the front headphone outs. You might try flipping that switch up and down a couple of times and see if that bridges some Gremlin'esque synapse FU. Also, if this switch is set to variable and the volume pot on the front of the unit is rolled all the way off, you won't hear anything from the XLR or RCA outs.

Good luck,

Deej

I don't think the person that is attacking me our that I'm attacking is evil. If they are directly mine or someone else's life and the only way I have to stop them is to kill or injure them I think is perfectly except able and a normal reaction pf our species. We are hoarding pack/tribal creatures that have been lucky enough to our brains become our main survival tools. Our environmental manipulation was/is one of our methods of survival. Our tool making ability only made this process faster and more powerful. With the speed of technology in the past few centuries I think has made the previously excellent survival mechanism start to work against use. We need to either to alter this behavior ourselves or wait for evolution, nature or whatever you want to believe to get around to changing it. This may involve removing us out of the picture. Personally I think we should alter our now self destructive behavior. We have been here a far shorter time than any other species. I can only hope that this is just the very beginning for use and we will last as long as the dinosaurs. Heck even lasting as long as some of the proto-humans would great. Many species have died out in the past from naturals disasters, plagues, overgrazing, over population. We have as

far we know developed the unique ability of being self aware so we can potentially change our minds and methods of dealing with the world.

A radical group of people that feel that the dominant government/society is destroying their beliefs and way of life. They believe that the only way to stop this is by committing terrorists acts on a large scale against their protagonists killing thousand if not millions of their enemies to bring about their vision of the world.

Luckily Clancy did not write the Turner Diaries because would probably be influential on enough actually make a difference. It has only influenced fringe groups so we've only had a Oklahoma city bombing so far. The book is poorly written almost as bad as Mein Kampf. Another book that I'm glad Clancy didn't write. :)

Even using Clancy in the same sentence is silly. Does doing so, strike you as clever?

You should read Rainbow 6, you have got it totally wrong. In this case it is the radicals who are planning a giant die off in the name of Gaia, not the government.

The closest thing to Mein Kampf in this whole discussion is right here:

>>OK, well, I had it working & it sounded fucking great, then it
quit working & I couldn't get it back. At first, I wasn't able
to get it to sync to the digital (lightpipe) input from the MOTU
8-Pre, then I changed the Paris Sync settings a few times
(toggled back & forth between Digital & Internal), got it to
work on "Internal", but was getting some random clicks- toggled
back & forth again a couple times, and finally got it to work
on "internal" - no clicks. Was running the 4 Tom mics into

channels 1-4 of the 8-Pre, then out through lightpipe to Paris' ADAT module at 44.1k, EQ-ing them, then summing those 4 channels in Live Mode into a stereo L/R Tom mix with NoLimit slammed across Paris' 2-Buss... Toms sounded fucking awesome... then took Paris main analog outs into the Multiface (had to go analog there since I record in Cubase at 88.2k) and voila! Ass-kickin' tom sounds using Paris as a front-end!

Unfortunately (or fortunately, depending on how you look at it), I figured I'd better shut down the system & reboot to make sure I could get it to work tomorrow when I start recording this band that's coming in... good thing I did that tonight instead of waiting until tomorrow & dicking around, looking like an idiot, because when I rebooted, I couldn't get it to pass a signal this time. I had saved the project as the very last thing I did before I shut down, and so nothing was missed - I even verified connections, etc in the Patch Bay, and toggled back & forth a few times between Internal & other sync modes again, but nope... no signal from the 8-Pre was being seen by Paris... switched the MOTU to 88.2k and routed the lightpipe into one of my Multifaces & there it was - no problem with the MOTU digiblah outputs.

SO, I wonder if this is just one of the Paris ADAT card weirdnesses I've heard so much about? It's a shame because:

- a.) The toms were sounding farkin' killer with some Paris EQ & NoLimit with zero lookahead on it, and:
- b.) Now I have to use four tracking channels for Toms (one for each tom) instead of a stereo L/R submix. A waste of resources.

argh.

More weirdness since installing the ADAT card... when I launch Paris, I get an error that says it was unable to launch & must shut down (Paris, not the PC)... first time I booted up tonight this happened once; relaunched Paris once I didn't get that error... 2nd time I booted up tonight, I got that error three times in a row before I was able to relaunch Paris without seeing it pop up.

"Argh!" again.

Neill'm not sure if I'm missing something here, but if I am I don't see what it could be. I'm just wondering what the point is of a WAV file given that they are so big and clunky. I was considering different options for storing audio. This particular concept is a bit of a mix of the concept of floating point numbers, mixed with the SA audio format, in combination with some other ideas. I came to the conclusion that you could store audio in a far better

compressed and lossless format, with infinite amplitude, using far less bits than standard WAV files, with an end result identical in accuracy to a standard WAV file except without the amplitude limit.

Programmers amongst you, ponder this for a moment:

Imagine that your audio packets are sequenced in binary like so:

Bit 1: +/- bit - signifies whether the wave is going up or down.

Subsequent data: XY pair where X is a data bit, and Y is the end bit.

....continue with said pattern until an end bit is found.

For example, silence, or any flat signal, would be represented with the sequence 001 repeated. The first zero is the +/- sign (in this case irrelevant as the data is a zero). The second bit is the signal movement data (0 indicates the amplitude hasn't moved) and the last bit is the end bit, indicating we can move on to the next piece of data. This would create a flat line in 3 bits, rather than 16 bits.

If the signal is rising or falling by 45 degrees or less, then we can still represent it in 3 bits. The 3 bits allows the signal to rise in steps of a single bit, hence allowing you to map an exact digital path of up to 45 degrees in either direction with three bits instead of 16.

If you go through the math (assuming a 100% value is a straight line directly up and 0% is directly across):

Rising by 75% would use 5 bits

Rising by 87.5% would use 7 bits.

15 bits would allow a rise/fall of 99.21875%

I can't imagine it would be very often that you would require a rise or fall of greater than 99.21875%, hence you would always be saving space. Worst case, a 33 bit message would give you exactly the same ability to rise and fall as the current 16 bit wav message gets if you go from 0 to 65535 in one step, but I can't imagine this ever happens in reality. The point is you could replicate it if required.

You could gain further efficiency from the first two bits by slightly changing the system. So:

001 = No change

011 = Subtract 1 from value

101 = Add 1 to value

111 = Add 2 to value

By doing this a three bit packet can go anywhere from down 45 degrees, to

up 67.5 degrees. You could gain even more data efficiency by allowing a "change direction" of the bias in the header packet, so if we had a 1KB number series, the initial packet would have a bit signifying whether the bias in this packet was towards up, or down. Using this as a system we could probably reduce the vast amount of audio down to just 3 bit packets, rather than 16 bit packets.

You would have:

- (*) Infinite amplitude to your signal
- (*) Lossless compression
- (*) Probably 75% or more reduction in data size compared to wav.

You could use near identical technology with video. Each bit of video data could be represented in 3 bits assuming that they were not changing in value or were changing slowly, and once again you would have lossless compression.

I have another theory to gain a more analog sound, which I'm still considering, but I thought I'd throw that one out there. Some comments would be good, and if somebody with programming nouse would like to throw an encoder/decoder together, well go for it, so long as the format stays in the public domain.

What do you think? Sound feasible?

Cheers,

Kim.Dear Neil,

First of all without even reading your routing scenario please check that the Nolimit with 0 lookahead is a NO NO thing as the 0.50 !!

Use instead 0.001

The above (0 and 50) will make problems even not working at all.

I will read your routing and will post other thoughts.

Regards,

Dimitrios

>NeilDear Neil,
Although I did not quite understand your routing scenario I will try to help
a little.

If you use an outboard preamp with adat out and you wanna use Paris together
with cubase and Rme there must be a clocked setup.

One solution is to have RME as master so the wordclock out of rme (does it
have one ?) gets in wordclock in of Paris, so in Paris project you will use
external sync.

Now The external micpreamp has adat out and probably wordclock in.
You will use the Paris wordclock out to connect the preamps wordclock in
and set the preamp to external sync.

Thus all your devices will have common clock and there will be no clicks
whatesoever.

If you use only analog preamps send to Paris with analog ins and then the analog outs to RME analog in then you just need to connect your wordclock out of RME to wordclock in of Paris and set Paris to external sync.

I hope these help.

You can describe your system exactly so maybe I can be of any further help.

Regards,

Dimitrios

Yes I know what the book is about and what I was getting at apparently
unsuccessfully was that you can replace the government with anything you
want including Gaia. The people in both books are under the delusion

that they are doing the right just thing and are saving their world.
Those are only similarities I see in them at all. Having Clancy not writing these books is because being a good author he would have made the books far more influential than they were.

Ummm never said that nor implied it. Both documents are some most concise ones ever written.

The people they are written for have the habit of interpreting them for whatever ends they feel like.

The 2nd amendment and the 6 commandment being the simplest and most straight forward line written in either document.

They are also arguably both suffer from the most re-interpretations.

-----=_NextPart_000_0010_01C792EF.6A0351F0--Don,

This article down to and including the sentence:

"It's a train that carries all the earth's species as unwilling passengers with humans as the manically insane engineers unwilling to use the brake pedal."

.....appears to be deadly accurate. The remainder is simply a pragmatic argument based on statistics. Do you dispute the statistics? If so, can you disprove them. Has anyone even tried? Is there even any point in it? If not, why would you dismiss this as being Hitlerian? He's not advocating the survival of one group of *superhumans* over another group of *subhumans*. I'd say he's pretty egalitarian for a Nazi. I personally don't think there's a chance in hell that things are going to change for the better here unless we drastically reduce the number of *us* somehow and I also believe that our biological imperative to breed and survive will eventually be the end of us

but I think that this will be taken out of our hands if we don't take some steps that, by virtue of our very instinct to survive at all costs, we will never be willing to take.

Beware the microbe.

;o)

No it doesn't. That is the part you extract because you care so much about this issue. In reality, the article boils down to this

There is NO way to implement the recommendations of Watson without a regime that would make the Nazi's look polite.

And this is the subtext of all these ideas: the individual behind them is unbalanced, seeing humans as "no more intrinsically valuable than earthworms". This is, of course, absurd. Ironically it takes a human, with all the benefits of our big brains, our schools, our science, and our reasoning and writing skills, to say such stupid shit. The statement itself proves him to be wrong and a fool since the earthworm cannot assent to it, nor dispute it. Watson is a moron and a misanthrope.

<http://www.discoverthenetworks.org/individualProfile.asp?ind id=1217>

<http://www.activistcash.com/biography.cfm/bid/3370>

There's lots more.

If you would like a serious discussion of these important issues, we will have to find a different starting point, one informed by rational beliefs and willing to examine contradictory evidence.

>.....appears to be deadly accurate. The remainder is simply a pragmatic

>argument based on statistics. Do you dispute the statistics?

Abso-fuggin-lutely. I dispute anything out of Watson's mouth.

>If so, can you

>disprove them. Has anyone even tried?

I looked around. There is no specific scientific refutation of the piece out there yet. It is too new. There will be one.

>but I think that this will be taken out of our hands if we don't take some

>steps that, by virtue of our very instinct to survive at all costs, we will

>never be willing to take.

I, of course have a different view of the future of humanity.

But even within your perspective, we would have to commit genocide on all the people who will never accept the brave new world you try to convince them of. Do you have no love for those billions of souls? Is love and respect reserved only for animals? Can you not see how psychotic Watson's ideas are?

>Beware the microbe.

Yes, and the rest of the seven deadly plagues as well....

Assuming that a *regime* is necessary to pull this off instead of coming together and trying to work some sort of common-sense solution.

>
 > And this is the subtext of all these ideas: the individual behind them is

I'll bet that an earthworm would differ with you. I think that we place far too much importance on ourselves, which is natural to us since we have evolved to the point that we have invented God in our own image..

This is, of course, absurd. Ironically it takes a human,
 > with all the benefits of our big brains, our schools, our science, and our

I'd certainly be willing. I'd say the larger question is why does it take someone with such extremist views to rattle our cages to the point where the problem is discussed in a serious manner.

I think a good start would be a bit of common sense as far as our breeding and end-of-life thinking goes. Our religions tell us to "be fruitful and multiply". These religions were born of a time when we weren't necessarily at the top of the food chain. This philosophy is utter insanity nowadays. Also, on a more personal note, something that really sticks in my craw is the strange affinity we have for prolonging life when it isn't desired by the living (and yes, I have experienced suicides and know the devastation this causes). As I get older, I often wonder when I will get to the point when I'm so damn miserable I'll be ready to move on. I'm only 57 but I have lived a lot in those years and I have already decided that the living death that is a nursing home route isn't for me. It just ain't gonna happen, nor would I desire to inflict my decline on a family by being set in a hospital bed in their living room (which I have seen happen as an alternative to nursing homes) . I'll likely choose my own way if it isn't chosen for me. My mom is to that point right now. We have had some open and frank discussions about this but her religion tells her that to end her life on her own terms is a sin and she will burn in hell. She is 85, still active and she is praying for a swift and merciful end when it comes so she won't be required to experience this final indignity of losing all control over her body as she becomes an total invalid. I doubt I'll have these reservations. I really don't think it's *humane* to force elderly and sick folks to carry on if they are ready to leave this life. It has been stigmatized though by certain religions to the point where there is the certainty that eternal life in a burning hell is waiting for us unless we eke every last bit of misery out of this life, and by doing so, prolong the misery of our loved ones as they try to mitigate it, which they cannot do. Maybe I will just move to Oregon when it comes time to take a powder...of course, I'll have to make it look accidental so my life insurance company will still pay off. Maybe a nice cocktail of Oxy and Succinylcholine would do the trick.

Regards,

Deej"DJ" <www.aarrrrggghhh!!!.com> wrote:

>Assuming that a *regime* is necessary to pull this off instead of coming

>together and trying to work some sort of common-sense solution.

Ok, you call Bush and Blair, and I will call Ahmadinejad and Olmert. We can all get together. I will let you present their population reduction targets to them.

And of course, that assumes that Watson we right. I don't buy it without a non-insane source.

>> And this is the subtext of all these ideas: the individual behind them is
>> unbalanced, seeing humans as "no more intrinsically valuable than

Wait a minute! Not much of a brain there... How would it differ?

As far as inventing God in our image, that is theology, (and bad Tull lyrics)
and if you want to discuss that, I will, but trust me, that is not an unassailable
position...

>This is, of course, absurd. Ironically it takes a human,
>> with all the benefits of our big brains, our schools, our science, and
our
>> reasoning and writing skills, to say such stupid shit.

>We say lots of stupid shit besides this Don.

Yeah, and a whole bunch of it came from an education that taught us that
misanthropy is enlightened...

>I'd certainly be willing. I'd say the larger question is why does it take

>someone with such extremist views to rattle our cages to the point where
the
>problem is discussed in a serious manner.

It isn't. Not yet. So far it is just a dispute, not a discussion. You
and I go back
and forth, the right exposes him for the fool he is, the mainstream left
gets
quiet, while the hard left tries to turn the discussion back to the actual
"facts"
he quotes. No one listens. This subject is not getting the hearing it
deserves,
and that is indeed a problem.

>Well.....it could also be that the reason there is no refutation
>is.....?

Oh, I dunno, maybe because Watson is a barking moonbat? And no one takes him seriously enough to answer his assertions?

I have heard that we have more biodiversity today than at any other time, and that humans are responsible for a minute portion of the extinctions we are experiencing, but I cannot give you the reference for these things.

>I don't advocate genocide. I do advocate a refocus on what is good for the
>survival of the ecosphere, which happens to include us, and I think there
>are ways to start changing this stuff....but we need to start taking this
>very seriously

Then the population reduction goals will not be met. To do so, simply requires some mechanism for huge numbers of deaths.

The discussion is important, but it must exist among the reasonable. Too many lives are at stake.

>I think a good start would be a bit of common sense as far as our breeding
>and end-of-life thinking goes. Our religions tell us to "be fruitful and
>multiply".

In Christianity this was the advice given to the first humans in an empty earth. Christians do not generally believe it to apply to us today when the world is quite full. How can you proceed from there with such a faulty assumption?

>These religions were born of a time when we weren't necessarily
>at the top of the food chain.

And there you go. Religions were born of man. Simple atheism. I reject this worldview out of hand. Now, if you want to talk about stewardship of the earth, we have much common ground.

>Also, on a more personal note, something that really sticks in my craw is
>the strange affinity we have for prolonging life when it isn't desired by

My
>mom is to that point right now. We have had some open and frank discussions
>about this but her religion tells her that to end her life on her own terms
>is a sin and she will burn in hell.

Do you know why? Here is the Catholic position: Life is a gift from God. We did not give it, and should not take it unless we must to save innocent lives. When we commit suicide, we commit a sin that cannot be repented of because we are dead. It is a sin thrown right in God's face against the very life he gave us.

Now I am not Catholic, and I suspect that God looks at the whole life, not just the end, but their position is a great touchstone to balance out the

secular culture. They believe that if we have faith, he will get us through the death we must face, and we will go somewhere much better.

If you believe in God, it makes sense, if you do not, it is barbarity.

>She is 85, still active and she is

>accidental so my life insurance company will still pay off. Maybe a nice

>cocktail of Oxy and Succinylcholine would do the trick.

I just can't bring myself to condemn the person who does this, but I honestly

think it is a horrible thing. Listen my sister died from Oxy, depression,
and

self pity and my Mom is taking the most prolonged miserable way out I can
imagine. It's bullshit, but it's MY bullshit dammit, and I will face it
with my

faith and dignity intact.

The Apostle Paul said:

For I am already being poured out like a drink offering, and the time has

come for my departure. I have fought the good fight, I have finished
the race, I have kept the faith.

Now there is in store for me the crown of righteousness, which the

to me, but also to all who have longed for his appearing.

And you know what? I don't even CARE about the crown...

take care

DCWe need to get together again and chew the fat.....barking

moonbat???...I like that.

;o)

Micelis. yessss

Oh, and some great music would be fun...

Come on out.

DCI'm gonna do it as soon as I regroup from the Denver tour.

;o)

Going through a USB Midisport 4X4 to get midi to them.

Any ideas?

JHThose two would make a great couple.

Dave,
Did it just get flakey or did the ADAT card not show up?
I installed a second on my rig and it shows up fine.
Just curious since I'm adding a couple 442s soon.
Mines about the same as yours as I understand it.

Page 188 of 206 ---- Generated from The PARIS Forums

more power and available stuff than the OS9 boot limitations will allow me. (Still using a G4 for the live tracking rig, though. I know for a fact that I can record 16 tracks for 2 hours straight with no burps - I trust that.)

I was toying with building a pc for that, when suddenly I'm faced with two free Dell P4 boxen.

Free is good.

I'm going to use one, and set one up for a friend as a household computer - so, I need advice on which would be better for Paris.

One is a Dimension 4400 - P4 2GHZ, 512 cache, 400MHz FSB

The other is an Optiplex 260GX - same chip.

Both are full-sized towers.

So, essentially, I have to choose between the Dimension, which is aimed for the home market, and the Optiplex, which is aimed at the business market.

Suggestions?

pabPaul

Probably want to stick with the Dimension. I'm not sure of current models, but older models of the optiplex use a riser card for slots. Had issues getting my original Paris rig to run on one (but that was a few years back).

The downside of the Dimension is all the consumer software they drop onboard (although it's started to invade the Optiplex line as well). Plan some time to sit in Add/ Remove Programs and uninstall unneeded SW (or wipe it and start fresh if it still comes with real XP CD)...and yes go XP.

JH

I actually was trying to setup for a friend that was coming over
tomorrow and thinks we should be able to use sync from Paris to drive
the Arpeggiator on the XP80. Sounds like it's a no go.

Cool. Yes, I will wipe and do a fresh install of JUST XP and tweak to taste based on what I've learned here.

I was planning on building a rackmount pc for this, but I guess I could just use a rack shelf and lay the Dell over on its side. Free is more gooder, so I go with what I have.

I will load it with ram, though.

pabl took the outside shell off a Gateway and attached it to a rack shelf.
Price was right for me too.

:~)

>It's been too long a day for me to really wrap my brain around your
proposal, but it does sound like you are proposing something like
adaptive differential pulse code modulation (ADPCM). What you describe
is a differential encoding stream - reporting the change from state to
state versus actually reporting the state. Provided your underlying
data stream is error free, differential encoding makes sense if you
are modelling a system with gradually changing codewords.

Alternatively, I wonder if some type of Huffman code (using variable
length codewords - shortest for the most frequent "characters" to
longest for the least) might work too.

Sorry to get technical here, but I happen to work with some of the
world's experts on encoding data. My first boss was a student of the B
in BCH codes.

No need to apologise for getting technical. It sounds interesting. I'm probably behind on what the technology is which is out there. I guess I was just surprised when I estimated such a potential compression in a lossless format.

I have another "lossy" compression idea also. No doubt it's an idea that already exists also. ;o) It never hurts to go through such things though.

Cheers,
Kim.

rying to work some sort of common-sense solution.

scchhhnip!

Let's start with the welfare state. No job? No income? No kids !! Stop
milling out more ill-parented losers !
If ya want kids, earn them by proving you'll actually take care of them
through responsible actions. This will solve a gigantic portion of our
upcoming problems. Overpopulation. Overtaxation to support dead beats. Crime
on the overall, created mostly in my mind by poverty imbalance and lack of
proper upbringing (aka, parenting). Less broken homes.

Now.. just getting everyone to realize the benefits socially of this over
what can I do to make people depend on/vote for me or *how do I get free
"assistance" so I can be a baby machine and never have to work or lay here
and sell my food stamps for dope, or etc...*

AAAaron Allen wrote:

> Crime on the overall, created mostly in my mind...

I see the problem, Aaron. Quit creating crime in your mind!! ;^)

Hey, when you get a crime free moment, can you email me that
construction info we were talking about? TNX!

Cheers,

-Jamie

www.JamieKrutz.com<http://www.polysteel.com/>

The insulation factor of this stuff is (depending on what you set up) up to
R50! They say you can literally heat a room with a decent sized incandescent

lamp... crazy man.

I heard a story that someone ran a semi truck into one of these houses and it basically demo'd the truck and the house required little to no repairing afterward. Try that with standard wooden construction!

Haven't been able to get the water reclamation system info yet, but I'll pop that out for you soon as I do

I'm not a "zealot," just a mostly satisfied OSX user. And I'm not all
that big, really, even after that last bowl of ice cream.

Maybe that's why, so far, Vista hasn't impaired my ability to
communicate in any measurable way. :^)

However I did run an earlier version of Cakewalk once and noticed a
great deal of room for improvement. Perhaps they've made that self-help
journey by now and the whole Cakey/Vistish package might just tweak the
hopes of someone with OSX-envy. ;^)

But anyhow, speaking of UI flashiness I'm pleasantly distracted by how
much Beryl on Linux appears to work like OSX. No doubt Thad will not
deign to install it because that flashy stuff is for weenies, but it
looks fairly nice to me. Might be a good use for a Dell...
