has one of these Claytor-67's and LOVES it - just ask him).
This is the mic that inspired Royer's Mojave MA-200, which goes for a grand, street price. This mic is a little less "scooped" in sound than the Mojave (one of which I have, so I've a/b'ed 'em), and is actually a little cleaner, or less "wooly", depending on how you look at it. Comes with swivel mount & PSU/PSU cable, no aluminum case or Cherrywood box or anything like that for this custom hand-built rig, but it will of course be properly packed to ensure safe arrival. \$500

6.) RODE NT5's - Nice, quiet, bright but not overly-hyped SDC Matched Pair. Sound great

We got Photoshop, Illustrator, Pagemaker and a bazillion other programs today. some of them may not translate to the PC from the Mac without some help.

this same company has another program that incorporates Macopener with the ability to translate other files.

on Hat, as room mics, on Acoustic guitars. My perception of these mics: Want a pair of KM-184's but can't afford 'em? Get these... self-noise, SPL, and SNR all spec out within a couple db's of each other, and these are a bit more "sparkly"-sounding than the 184's (to my ears, anyway, the 184's are somewhat smoother) but a pretty good utility pair of SDC's, to be sure. Comes with mic clips, foam windscreens & hard plastic case housing the whole kit. Used twice. \$300

7.) TL Audio Indigo 2051 - Hybrid Tube/SS Channel Strip... has Mic Pre/DI/Comp/4-Band EQ... EQ is pretty clean & useable (Hi shelf, 8k or 12k; Lo shelf, 80 or 120; Lo-Mid semi-parametric; and Hi-Mid semi-parametric). Compressor is VERY smooth. Want to hear it? Look up any of the "Abinormal" clips/songs on saqqararecords.com & guess w

>>>I worked on Service Desk for some graphic designers/publishers a couple of years back who used it a lot. Yes, that's all it did, allowed you to open Mac disks on PC. Did it well though.

We had Illustrator, Photoshop, Indesign and all the other common publishing goodies however and they translated pretty well. There are a few little pitfalls such as fonts and stuff, and the two file systems have a few compatibility issues. Macs can only have about 32 characters in their file name for example, whereas PC's have 256 I think. Mac's however can include wierdo characters like % / & and stuff whereas PC's can't. Also, on a PC a word doc has the 3 character .doc on the end, whereas on MAC that's all hidden and invisable (and in most cases I think a 4 letter descriptor). Hence you often had to

add the suffix when moving to PC etc. Often you'll need to be sure you have the appropriate fonts available on both platforms...

But in terms of basic file compatibility between the Adobe apps, there wasn't really any issues I experienced. Adobe actually dealt with the cross platform bit fairly well IMO.

Cheers,
Kim.

high vocals were done through the compressor section of this unit, and which were done through a vintage LA-2A :) Although it's hybrid, it doesn't sound raspy like a lot of the starved-plate designs, unless you push the crap out of it intentionally, then you can drive it hard & get some dirt going. If I used compressors & EQ's more to track, I'd prolly keep this one, but since I don't very often, let's see if anyone's interested... Single-space rackmount unit, no manual or original box. \$500

8.) Avalon 737 Mercenary Edition... Same as the "SP", but in "None More Black", and has foregone the expensive metal knobs... everyone knows this unit, I think; but if you don't, you can read about it here:
<http://www.mercenary.com/vtspecmered.html>
Minty, minty, minty - w/Manual & original box \$1,600

I think t

he prices mentioned above can probably either include
or partially mitigate some of the shipping costs, depending on
where you live/shipping & insurance costs, etc. "E" me if
interested in purchasing or if you have something interesting
you want to propose in trade for either one or more of the
items:

neil DOT henderson AT sbcglobal DOT net

NeilHave you considered one of these?

<http://www.uaudio.com/products/analog/LA-610/index.html>

or these:

<http://www.uaudio.com/products/analog/2-610/index.html>

Seems like a good match for the band's style. That and mixing and
mastering in Paris. I just *loved* what multi band comps did in Paris.

A bunch of work to setup but it really sounds great

> BTW, I still have some PARIS stuff for sale that never went -
> MEC, 8-in, ADAT, C-16, cards, etc. Thanks DJ - I just saw the batch option under Wavelab, which rules. One question, though - I guess only the PAFWaveConvert utility allows you to interleave 2 mono PARIS files into a stereo wave file (nice feature for importing to modern DAWs). Is there a way to get Wavelab to do the same?

Maybe if we email them about the demo policy they might consider another option. I'm sure it's to prevent demos from being cracked - and demoed by too many people - gotta keep sales to a minimum ;-). Even if price wasn't a consideration (for \$600 it better be stunning), I have an aversion to paying for a "demo" of a product that I may decide to can after 20 minutes.

in handy too ;-).

I'm looking forward to giving the Sony plugins a spin though.

It is a good time for plugins - though the dongl

>heh! yeah! that was what I was going for when I ran across this. One of my
processors only has AES I/O and I needed a way to be able to use it
digitally at 44.1 or to use it analog at higher sample rates. The Behringer
SRC is the only box I could find that I could afford that will allow this.

;o)

p. Tricks like holding down the Alt (i think
it's Alt) and clicking on events let you switch to scissors tool quickly.

Once you stack up a bunch of takes you can cut them up with scissors as
it's looping then drag them with CTRL to constrain (I think it's CTRL)
and press x to cross fade them all. What don't you like about punch in,
seems to work fine here.

Stacked mode to me is a killer tool.

I have heard the Receptor is good for VSTi. The system I described is one I
have now. I was running Paris on it, but have moved Paris to an older
Barton XP 2500+ system so as to use the P4 for VSTis. I tried Akoustik
Piano on the older system and was not satisfied with the sound - mid range
and up was sort of thin and guitarish sounding.

(859) 635-5762Well..I would like to be able to record an entire band at one time if needed.

Inclding a live drumset.. Also Iwould like SPDIF in and out, ADAT, MANI

OUS and HEADPHONE MIX OUTS for different headpone mix. As many mic pres as possible with 48v and pads.

as many ous as possible. i dont use outs that much excep for monitoring and headphones, but I would like them for experimentation and new routing techniques in the future.

all under\$1200

What kind of converters would you use for that? Hopefully not Behringer..

Talk about hellfire.. (ba doom boom..) :-)

Cheers,

TCChris,

I've been thinking of getting one of those little Presonus Firebox gizmo's for Amy's new PC, just so she can plug in a guitar and mic and record a vocal/guitar track to a click when she feels a song coming on. The thing that appeals to me about this is that it is small/simple (at least appears to be), has a couple of preamps and is bundled with Cubase SE so our platforms are compatible and I can grab the project/tracks on the network from the main DAW in the studio and import them.

Is the Presonus driver so shabby that it would not be usable for simple stuff like this? She will be using my old DAW rig for her new graphics/music computer. ASUS A8V-Dlx, AMD 64 4400x2 CPU 2G RAM on XP SP2. I figured the FW port on this would probably handle simple two track recording.

Is there another simple and inexpensive (and better) 2 track recording interface that is bundled with Cubase SE?

Thanks,

Deej

The ASIO driver has a some compatibility issues with Sonar which both
companies are aware and supposedly dealing with .
Cakewalk has their own "unique way of ASIO support.

Chris

(859) 635-5762 HI Thad,

If you have a compatible firewire chipset the Firebox works great.

Chris

TCB wrote:

Does the Apogee mini-me USB qualify as rant worthy? Oh, sorry, fire wire...

>chrisl@adkproaudio.comHI Thad,

The main issues they have with the Firebox have to do with their choice of 1394 chip they as well a bunch other manufacturers use. There some combo firewire /pcmcia and or card reader chipset by Ricoh and ENE and well as some firewire 400/800 combo chip sets that have recently started to be used in the majority of mid and low priced laptops. Especially ones that have a combination or card bus/ express slot. Presonus are working on driver updates to possibly fix these compatibilty issues. The issues with the fire studio are not the same as what is happening with fireboxes. We've actually sent some laptops to them so they can hopefully improve the issues. We supply them with systems for trade shows and for their developers to use already. ASUS, Clevo, Dell and probably others have models that use these Ricoh chip sets. The only reason we came across this is when we were trying to find white boxes we could still sell that had card bus. All the ones we could still get suffered from having these chip sets. Sense RME is the only company still making a card bus and will be replacing it soon with a express version we decided it wasn't worth the effort. RME and other make firewire devices that work as well or better than the RME card bus units. The Ricoh firewire/card bus combo chip sets will have performance issues with card bus devices such as the RME as well as Firewire devices.

End users will almost always tend to assume it is drivers or the Operating Systems that are at fault.

PS- Can you please overnight me a large pepperoni and sausage pizza from Pepe's. The supposedly "best" Pizza down here is about as good as in a High School cafeteria . :)

Chris
