>

>;oP

>

>One possible solution to this would be Systemlink, I think. Use the acards

in a separate DAW to minimize the hit to the PCI bus of the workstation

performing playback.....at least in theory.

I'm pretty much SOL once my UAD resources exceed 40%, no matter what PCI latency I use.....and I've got another DAW just sitting here.....and AMD XP 3000 CPU with 2G PC2700 DDR nd a system drive. All I need is a case, PSU, a sound card and VStack. I have configured this machine in the past with 3 x UAD-1 cards in the PCI slots without issue. Since there ar 6 PCI slots and one of them was holding my Magma host cards, I doubt if I would nave much problem running 4 x UAD cards. I just wonder if the PCI latency would be an issue on this machine under heavy plugin loads also, even though it wouldn't be hosting a playback application(unlessVstack could be considered a playback app)

Sorry for the delayed response here..

Ampfarm 3 is for TDM ProTools only. I've not tried Guitar Rig with Paris, so I'm not sure, but I know Amplitube works with Paris, so guitar rig might.

Also, I think they are releasing a new version of Amplitube soon, so that might be worth checking out.

Cheers,

TC

Cubase has asked me the question:
Pending Connections: Direct Music/Midex 3.1.
Should this be assigned to my MIDI card?
It isn't listed as one of the options. The only thing
Midi related is Midi Map. Is this where it should be?
Everything is working now with it assigned to the
Delta 66 A-B out.

I am in need of a new ide drive. Is Seagate the current
'go to' drive company? I'm looking at the 7200 - 8 meg cache job.

Thanks for all your answers.
TomOk.... I figured it out...
Darn drivers didn't load properly adn that .dll musta been corrupt... but
I uninstalled the scherzo drivers and reinstalled. Paris popped up and working
fine... so far, no lock ups or not powering down properly after using Paris.
WooHooo! Back in business! Although I sure miss my dual Pentium III motherboard.
That thing was as solid as a rock.... ok.. back to the jams... lol.

>Hmmm....I see what you mean. Seems I've got something here that is a bit
better (and beyond) systemlink anyway. Theoretically, I could split off one
of my HDSP cards and a couple of the UAD-1 cards, install them on my second
computer, install Cubase SE (or any other PC compatible audio app which has

PDC) on the second computer, use my network to transfer some tracks (like the drum submix and bass instruments) to one computer and the rest of the audio to the other computer, run ADAT sync cables from ADAT cards in my MECs to the audio cards in the two different comps, then apply the UAD-1 FX to the tracks on both computers which are controlled by ADAT sync from the Paris transport. this would be superior to systemlink, most likely. the downside to this is that during a lot of my mix process, I am just playing back using the Cubase SX transport, streaming the audio via lightpipe feeding Paris with the monitor bus in Paris feeding my DAC-1 . reference system. I only use the Paris transport to slave the Cubase DAW during the last phase of the mix when I'm automating tracks and panning in Paris and then subsequently bounding down using the Paris mix bus. In order to have both computers running in sync *without* being controlled by Paris ADAT sync, (which is most of the time I'm mixing) I would need to use a Systemlink compatible Steiny product and have a spdif connection between the two Steiny machines. I guess, after I finish tracking in Paris, sending and the tracks from Paris via LAN to WL5 on the Cubase DAW for batch conversion to .wav, I could then further transfer them from the primary Cubase DAW to the secondary Cubase DAW via LAN, then get a couple of my UAD-1 cards authorized for the second DAW.

This shouldn't take over a couple of weeks to set up and stabilize and would involve mixing on three x DAWs plus another comp running as a standalone FX processor instead of just two DAWs plus another one running as a standalone FX processor.

Hell manpiece of cake.

;o)

(actually, I'm not sure, but I think that I may not be quite crazy enough to want to deal with this much crap)

>and....since this crackling, which is the whole reason behind
speculating on this insanity, is likely being caused by all 4 UAD-1 cards
and all 3 x RMWE cards being shuttled through one host card on a Magma, I'm
going to pull at least one, and maybe two of the UAD-1 cards out of the
Magma and try to use them in normal PCI slots on the mobo. there are 3 x
slots on this board that don't automatically share with the AGP. My old
Cubase DAW never had this problem. I was running 3 x UAD-1 cards in the mobo
PCI slots and the three RME cards plus one UAD-1 card in the Magma.

I know this makes more sense than any of the other stuff, but it's wayyyy
too simple.

;o)

Hi Bill,

Well.....actually like I said, it's working fine. It's just not doing some things that I expected. I'm able to access 15 UAD-1 plugins at 40% of the available resources Any more than that and there is a problem. It may be as simple as moving a UAD-1 card or *removing* a UAD-1 card. Other than that, it's rock solid and I have a methodology that is working for me. Also, 15 UAD-1 plugins is a lot. I'm not really complaining about the number, just the fact that theoretically, I should be able to use 95% of my UAD resources. In practice, I seldom use 15 UAD plugins in a mix, though those Pultecs sure come in handy. I probably use the Pultec more than anything else. Anyway, my earlier rant was speculative, just because I think it's fun to push this as far as possible, but actually our systems aren't that different. My digital mixer is Paris. The cue system is a Furman HDS 16 system with remote HRM 16 mixers. This is a very cool and flexible setup. I track to Paris. I transfer to SX mix back to Paris. It's routed digitally in a number of ways. I'm used to doing it so it doesn't present any particular difficulties to me. You have a digital mixer and two computers. I have I have three computers and sync'd to a house clock one of which functions as an outboard digital mixer.. No problems there. I've been experimenting with clock cable runs and have discovered a few limitations there as well, but it's all good really.....just never *perfected*.

;o)

I'm looking for a reasonably priced Seagate 80GB, 8 MB cache, IDE with the 5 year warranty. Does anyone know which model number is=20 the right one?

I found this: ST380013A-RK Looks right to me except it's 40 pin...
I thought the new ones were 80 pin? =20

They are hoping to get in around \$80.00. =20

 my computer? The instructions direct you to the myparispro website, but
 that does not exist anymore. Can anyone help me with this??????????????

I have dell pent 3 1 gig computer with 512 ram
 3X eds cards
 1 mec
 2 8i cards
 1 adat card
 1 442

This setup worked perfect with win MEWhen I read about what you are doing I am so happy about my simple setup with 2 computers, a digital mixer and some outboard pres. The mixer provides all my routing, headphone, talkback and monitoring and I monitor VSTis on the second machine, while tracking them to the primary machine, to avoid latency problems. My standard is what I've learned over the years as a studio owner and engineer: it has to work properly all the time or it is not professional.

look a little farther down - you'll see Doug Wellington's <http://www.parisfaqs.com/>

I think it's in the XP links toward the bottom of the page. I think.

-steve

If it's not, someone will tell us shortly...!

Do to a faulty,but very fast ASUS N-force2 motherboard, I have to repace
it(Paris,Nuendo,LE).

-What is th difference btw,Nforoce3,150,250,&,ultra

-are there any conflicts with nforce 3 motherboard and Paris
-Any recommendations?
-Please, any mobos that are PCI relocation friendly :)
-Note: My Asus A7n8x-deluxe-e, while great for Nuendo & PT, was not that great for Paris..Especially when you turn on the SATA controllers...Bad idea..I finally got a Magma chassis. That seemed to fix some things..But, then the Mobo flaked out..
Replacement time !!@#\$%A^

Thanks in advance for the help...
LaMontDJ,

I did not mean to sound condescending or like I was putting your system down. I just had the impression you were having trouble with it. Anyway, it's your game and you should play any way you want. I just like to share my successful actions with others in case they can use the tips. Have fun!

BTW I am really interested in your possible mic shoot-out of the Gemini and the 47. I am thinking about getting a Gemini (when I have some time to really check it out).

The small 'b' means bits, which would make this drive transfer at 12.5 megabytes per second.

Did this come right from the Seagate site?

All the best,

MikePlease see the FS forum...

--

Best,
Peteplease...please...please - someone must know where/how to get these now that myparispro is no more.

Super Duper or Carbon Copy Cloner for OSX.

Both work. For OS9.X you can use the Finder.

Genel should point out that a lot of software that is registered to the computers
i.d. will need to be re-registered, even from a cloned drive.

With certain manufacturers like NI, this is a real pain!

This line look spretty suspicious:

> c.. Maximum External Transfer Rate : 100 Mbps

The small 'b' means bits, which would make this drive transfer at 12.5 =
megabytes
per second.

Did this come right from the Seagate site?

All the best,

Mike

KenHello Wayne.

I need an ADAT card and 24bit output card (2 pcs.)

I'm in Croatia (Europe).

Is it black or blue?

How much do you want?? ;-)

Greetings from Croatia!

ut) since I assume there is some latency in the Paris system.

However , when I'm overdubbing I have no choice but to mix a paris out stream (the previously recorded tracks) and the live mixer. I'm doing drums a lot , so the latency issue is important to the performance. I do notice if I leave both feeds is I can hear a "phasing" a little bit.

Questions:

1) Has anybody (or how could I?) measure the latency of Paris in this situation?

2) What's the right model for headphone sends here , all paris or paris and mixer output?

3) Should I be moving the overdub tracks slightly in time to adjust for the latency in 1) or am I making a mountain out of a molehill here?

Paris On ;)

daveHi Everybody,

Someone named New Venture Services Corp has picked up the myparispro.com domain and registered it through December 2006.

I hope Chuck is ok. I noticed that greatidea.com has been down for over a month now.

MikeNo, in the case of: "cwplugin.dll", the "

CW" stands

for "Christopher Walken", and what that plugin does, when activated, is to begin streaming audio clips from the famous SNL skit, of Will Ferrell playing cowbell, in perfect time to your track. It also subliminally injects various random quotes by Christopher Walken from that same skit, such as "I've got a fever... and the only thing that can cure it, is MORE COWBELL!",

Can really save a bad or marginal track... you should really

keep that one.

:D

latency in performance. I definitely felt this was a problem when I used a
very old version of PT on an old mac. But don't find an issue at all in
Paris. Maybe just send only the Paris mix and not the board mix too, I just
use a little Furman headphone amp which is sent signal from the MEC sends

solution may be to move closer to your speakers, according to the
formula 1 ft. = 1 ms. Thus, if earlyency is detected at 3 ms, you
simply sit on top of your console when doing critical monitoring. For
earlyency greater than 3 ms (or is it "less"?) it may be best to have
the speakers placed just behind the listening position, pointing the
other way. Either way -- another triumph of technology... We're lucky
to be living in times like these...

Steve I'm guessing that the latency with the UAD-1 cards could most easily be solved by bussing all tracks with UAD-1 plugins to a separate set of reference monitors placing them 36 feet behind the mix position, set up a stereo pair of room mics at the mix position facing backwards towards the monitors and reamping the UAD tracks.;o)

Hello James, OS9.2.2 for the Paris, could you E-mail me?

I stumbled across this post of you replying by accident and am having a heck of a time figuring this forum out.

I REALLY need to find out how to properly install and use VST plugins.

Steveit seems to have vanished also.

Seems like after I take this board offline tomorrow there'll be nothing left of Paris... BWAahahahahaha... ;o)

....that's a joke son... funny funny ha ha. ;o)

Cheers,

Kim.My 12 year old daughter has been plugging away on a beat up old Yamaha and I'm looking to get her something new in the \$200 or less price range

Donfor vsts I make C:\Program Files\Steinberg\VSTPlugins and put them there because that's where most apps want to install them. If the install makes a subfolder I copy the dlls up to this folder. Make sure to set the VST path to this folder in paris.

John

I was after Rhyme, which I have at home, but I wanted it here on my work box and haven't got a copy here. I found it in the end on another site though. Thanks anyhow.

Cheers,
Kim.Unless it is ugly and that turns her off (which is perfectly valid) does the Yamaha sound OK? One thing I think is important for a beginner is to have an instrument that is set up really well so it is easy to fret and does not hurt to play. A lot of new instruments in that price range will not play well, so if the Yammy is potentially OK, I would spend \$50 on getting it set up really nicely. instead.

It's a beautiful, rustic place and the natural sunlight and spectacular scenery in and around here and to the north in the area that is called Ghost Ranch. There was a director and crew there scouting locations for shooting some sort of sequel to Lonesome Dove. I used to live in LA and had some family and friends involved in the movie industry so I hung around this a bit in the 70's and again in the late 80's/early 90's in Austin when a lot of movies were being made there. I had forgotten how overly dramatic, demanding, rude and downright bizarre some folks in this industry feel entitled to act..

Our dogs didn't like them at all.

;o)Hi Bill,

Your system sounds very nice indeed and I've often thought of moving to a dedicated digital mixer myself. As long as this old dog continues to hunt, I'll keep feeding it.

;o)

Do you have a friend who's a good guitar player? If you know one, ask if they'll go with you to a store with lots of used guitars, and have them try 'em out and see if there's a good cheap one. There's often one good cheap one. If not, well, you haven't lost anything but some time, and perhaps you'll pick up some pointers.

If you find one, have your daughter try it. If it makes her want to play and it's easy to play and sounds good, you've got a winner.

I haven't bought a new guitar since 1971. (And that one turned out to be a lemon...)

version of my rig to do some mixing.

Previous setup:

4 EDS

2 MEC

PARIS 3.0 all clocked with GenX

I've brought with me 1 MEC and planned to use the internal clock.

Hooked everything up and I get error intializing PARIS engine.
No interface connected to master card.I've also gotten a 18/12 error.

In the Paris.cfg file I noticed MasterOutput Card=0.Should the 0 be an actual number(1 maybe)?

Any help?

Guess I should just not mess with the rig when its working.

TIA,

Petel have an entire Paris system sitting in my garage in the original boxes. Has the MEC uni and 8 inputs, 8 outputs. Everything in tact, all software...and a computer with everything installed as well. I shut down my studio about a year ago and the Paris has been sitting dormant ever since. I'm looking for a new home for it. Anyone interested or know of someone looking for one? Thanks... purplebandalero@yahoo.comSteve,

You can put your VST plug-ins in any folder actually. Here's what I would suggest though. Make an empty folder and name it "VST Plug-Ins". Put it where ever you want. I put mine in my PARIS 3.0 folder. Start PARIS and go to the "Project" window. Click on "Settings" and then select "Set VST Path...". Navigate to and select the folder you made. Viola! ;>)

TonyI got right in. Must be a hiccup of some sort. I was there earlier this week as well, I've noted no problems.
Still not working for you?

I noted that www.archive.org also had no updates for a while and thought the worst.

Must have been a temporary glitch... unless it's blocked at my work. I have changed locations.

Cheers,
Kim.

s ok. I noticed that greatidea.com has been down for over
>> a month now.
>>

>> MikeWhere were the cheerleaders? In my day there was lots of camera time
spent on the cheerleaders.

The Stones appeared to actually be live which was cool but that had to
be the worst guitar solo in Satisfaction that I have ever heard. hahahaahSince the plugin apps all
seem to install to C:\Program
Files\Steinberg\VSTPlugins I suggest making that dir and point to them
to avoid having to find the new path with each vst install.

>>

>> TonyHere are some of my picks for the coolest recording gear from 2006 winter NAMM show.

Alesis io 26 is some bang for the buck on I/Os, check it out. Similar to the I/O configuration of the Focusrite Pro 26 I/O, their using a T.C. electronic chips. \$599.00 list.

<http://www.alesis.com/product.php?id=96>

Apogee symphony PCI Express with up to 96 ch. and Ensemble FireWire interface with 36 ch. of I/O.

<http://www.apogeedigital.com/products/>

Lexicon MX400 And MX400XL Dual Stereo/Surround Reverb Processors.

You XP guys might be able to add a lexicon unit to your Paris rig???

<http://namm.harmony-central.com/WNAMM06/Content/Lexicon/PR/M X400-MX400XL.html>

PerSonus FireStudio

<http://namm.harmony-central.com/WNAMM06/Content/PreSonus/PR/ FireStudio.html>

PreSonus FireMax FS 8-ch. light pipe mic pre.

<http://namm.harmony-central.com/WNAMM06/Content/PreSonus/PR/ DigiMax-FS.html>

PreSonus Fade Port USB/MIDI Controller

<http://namm.harmony-central.com/WNAMM06/Content/PreSonus/PR/ FaderPort.html>

My number one pick has got to be the Focusrite Saffire pro 26 I/O FireWire interface! 52 I/O, 26 inputs and 26 outputs in a single rack space! You can daisy chain three of them for a total of 156 I/O!!! that would be 96 I/O ch. of light pipe, 48 in and 48 out! Hey Dee! If you could live with

48 ch. of light pipe in and 48 out, this could free up some PCI slots!
The cost, \$699.00 MAP.

The reasons the Focusrite Saffire Pro 26 I/O would work for me. Add the Gator Case Studio To Go and this would make a great portable recording rig. It's rumored that Focusrite will implement stand alone mode in the future, which would turn it in to a stand alone 8 ch. mic pre. It would make a good 16 ch. light pipe computer interface for my Panasonic DA-7 MKII digital mixer or any other digital mixer and it would add 8 mic pres and SP/DIF. It's cool that I could quickly move it around for computer to computer simply by unplugging the FireWire cable. It would be the perfect interface for the second computer in the dual computer Paris rig. 16 ch. light pipe, 8 additional ch. of analog I/O, 8 focusrite mic pres, SP/DIF, WC, MIDI I/O and 2 head phone out puts, for \$699.00!!! I think they just knocked off MOTU.

The one thing that is a bummer is, they didn't include the DSP chip for effects processing like they did on the original Saffire, but they did include VST and AU plugins of their effects.

<http://namm.harmony-central.com/WNAMM06/Content/Focusrite/PR/Saffire-Pro-26i-o.html>

<http://www.focusrite.com/>

Video

<http://namm.harmony-central.com/WNAMM06/>

<http://www.sonicstate.com/news/wnamm06.cfm>

Check out the video for Gator cases studio to go soft case and Pedal Tote, both vary cool!

<http://namm.harmony-central.com/WNAMM06/>

Studio To Go, Hard case

<http://namm.harmony-central.com/WNAMM05/Content/Gator/PR/GRC-Studio-2-Go.html>

well here's what been done so far.

1. tested each stick of ram and one (3 times) failed to boot. removed that from the equation and the rig ran long enough for a new tiger install plus some drivers and was shut down till the next day. it wouldn't post.
2. replaced main drive with a new drive and rig still wouldn't post.

(no boot chime)

3. replaced logic board battery and did pm reset several times spaced about 10 minutes apart. still won't post

4. cpu cooling fan comes on after about 15 seconds and stays on; still no post.

5. discussed this with the apple repair facility this morning for about an hour going over all the happenings and the consensus is...it's one dead mofo.

6. got 20 acres and i'm taking my little buddy hunting out back for some shooting lessons.

Pete,

This happened to me using Paris XP and two
ADAT modules in one MEC. If you can lose an
ADAT module or split them into two MECs it
should be okay.

Tom

"Pete" <ruthenburg@insightbb.com> wrote in message =
news:43e76e53\$1@linux...

Looks like the 18/12 is an ADAT issue,but I've only gotten this
1 time.

I didn't bring my GenX clock and I'm wondering if that is my
problem.I figured since I was using just 1 MEC I didn't need it
though most of my projects were clocked with it.

Figured I could open the projects then switch them to internal
clock;maybe I was wrong.I'm trying to open a default project=20
then opening the other projects,but no worky so far.

Since this year Super Bowl was in my home town, i have to say that this past
week has been a Blast!!! Oh yeah, there was a game too.:)

I love the Stones show. They were actually playing live!! As for the solo
at the end, hey that's just the stones. I love it!!

Have you checked out the Baby Taylor or the stuff from Daisy Rock yet?

Glad to hear there's another musician coming up. My 15 year old daughter plays electric and upright bass and is just starting trumpet. My 12 year old son plays guitar and trombone.

I played the Baby and it's a great guitar for the money.

Hope this helps!

I installed 1 EDS and it was saying not enough free resources.
I was getting gcCreateControl:ran out of controllers.[0/0}

Still wondering if I had my word clock would I have had these
issues at all;should of remembered to bring the damn thing.

 no interface connected to master card post below.

I installed 1 EDS and got this along with not enough free
 resources.The ribbon connectors are still connected to the
 other cards so next I'm going to disconnect;thinking that
 could be a problem.Paris di boot up,but I got this after the
 intialization period.

This is when I really love PARIS. You forget about how nice it sounds when you're in the middle of these scenarios:)

TIA,
Pete forgot to say when I have the 1 EDS installed it initializes, but after that is when I get the not enough free resources error.

Thanks Tom,
Pete

Windows or Mac? Did you try a completely fresh install? IOW, let PARIS create its own new Config files, etc?

I had a similar situation here. I have just one EDS card and a 442 on Win XP. System working fine until I installed a new PCI card (unrelated to PARIS) in the computer, and had to rearrange all the PCI cards including the EDI to different slots. Finally found out in the Hardware Manager the computer thought the EDS card was still in the old slot. I uninstalled the card from Hardware

Manger, thereby forcing it to realize the new card location, reinstalled PARIS, and all was fine.

Curt

curt <at> curtcass <dot> comDon, check out Seagull guitars...a few stores in Ottawa carry them...Metro

Music being the place I'd recommend. Best to play them all though, since they all sound (and are set-up) a little different. But, they're solid top guitars, and sound a whole lot better than you'd expect for the price.

Big thing to consider though is instrument size...a full size drednaught gtr might be too big for your daughter right now. Nut width will be a big factor too. Maybe the baby taylor would be a better fit. It'd certainly be worth her trying it to have something to compare against. I think Steve's has one...I think they carry Seagull too.

Cheers,

Kris

Yeah, and where are you located?

CurtYes, if Steve were on a PC this would be correct. Since Steve's on a Mac though he will have no "C:\Program Files" directory (or folder in Mac speak). Most Mac OS 9.2.2 and older programs that install VST plugs, usually prompt you for where to put them anyway.

Yeah, but only three songs? They coulda done a medley, or shortened the vamping, etc etc, and done more songs in their allotted time. Woulda given more Sprint cellphones more tunes to download.Hi Curt,

On XP here.I've now got 1 EDS ,took out the ADAT card from the MEC.I'm about to take out the other 8in and 8 out and try that.

Its looking like I'm going to have trouble getting a 1EDS stripped down MEC running.

When I try and open a default project it says there aren't enough resources.Guess I might have to do a fresj install.

Thanks,

Pete

For almost all of my major Mac backups, I use Carbon Copy Cloner:

<http://www.bombich.com/software/cccl.html>

or psync:

<http://www.bombich.com/software/files/psync.dmg>

With 10.4 (tiger), you can also use the built in "rsync" command, which is what I typically use on linux computers...

>some shooting lessons.

300 Magnum, .06, 12 ga. 45 acp .44 Magnum would work. I say line um up,

charge people 50 bucks to shoot, there is a lot of people that hate Macs!
If you put this on the internet with your story, I'm sure you could get quite a few people to show up. Hey, I might even come out for that. You could turn this in to a media event, Apple would hate to get a black eye right now. Do a pay for view on the net. Like I said before, you need to start a web site like "my Mac sucks.com". You could ask for donations for legal fees on your web site.

I would still contact Apple's legal department and tell them they need to repair or replace the whole system, or face litigation. You never know!

I'll take bad sound/solos LIVE over listening to lip-synching any day of the week.

Thanks super bowel 40. Its about time.

db"Doug Wellington" <doug@parisfaqs.com> wrote:
>Is there a problem getting to ParisFAQs?

No, just a problem with our ability to remember that you put the notes on there as well... ;o)

Good point. Only thing is I can't link to it as the browser only show www.parisfaqs.com as the url...

Cheers,

My JL Cooper MSB+ Rev 2 is down for the count.
I'm not sure it's worth fixing if there's a more powerful
reasonably priced 8x8 replacement.=20

Features I need are to merge at least two midi outs
into one and ideally three into one input. Split Cubase out to=20
7 destinations.=20

Choices I've found:
=20
Midi Sport (most expensive)

<http://www.musicmall.com/cmp/midiman.htm#MIDI%20Sport%208x8>

Midex 8

http://www.steinberg.de/ProductPage_sbf194.html?Product_ID=3D2022

Sierra

<http://www.adkproaudio.com/viewitem.cfm?id=3D1562>

Midex looks like it will interface the best with Cubase SX and that's my Midi package of late.

Any reason to try the others?

Thanks for your input.

Tom

When "Northern Exposure" was in production and on location in Roslyn, Washington in the winter, they'd ask residents in the neighborhoods they were shooting in not to walk on and/or leave footprints in the snow, on their own properties, so as not to spoil the beauty of a shot. No idea if any of that was specified in their city-issued permits to shoot, etc.

Curt

<http://www.curtcass.com/roslyn> (but there are no snow-shots on that page!) Thanks for all the suggestions...looks like Artie & Lutherie and Seagull are what to look for in town

AAHey Doug,
Thanks for the back up tips man! What I'm looking for in this case is to merely backup the Entourage mail folder.. is there a file (something similar to outlook/pst files) that I can grab that would be importable later down the road, should I need it?

Thanks!
AA

And this:

<http://www.hammacher.com/publish/72788.asp>OK everybody, listen up! I talked to Chuck today on the phone. He's going to send me everything. I don't know how soon, but it looks like it WILL happen. Once I get everything, I'll be putting the plugs up on ParisFAQs for download. I also hope to fix the bugs in Eventiter and Nolimit. Stay tuned!

I don't want to say too much yet, but I'm working on a foot controller that will work with the Looperlative and other devices. Once I'm done with that, I'll get back to the Paris hardware drivers...

Not sure I'm grokking that. What do you mean?

--

-Doug

<http://www.parisfaq.com> Checked the IRQs; all is good. When I have 1 EDS installed it initializes, but then gives me I/O is different than before. Hit ok it gives me same error, hit ok again then gives me error creating default project and a new project will be opened. Then I get not enough resources and the gcCreateControl error.

If I have all 4 EDS cards in I just get "no interface connected to master card" when initializing. Still wondering if having my wordclock connected would fix this.

Thanks,
Pete

>>Well, upon expending slightly more brain power, it seems the link is:

<http://homepage.mac.com/osxlover/ParisFAQs/parisonxp.html>

....but my point was that it never appears in the address bar. You have the
sight, oh what's the name for it... you're using that link think where
the URL in your address bar just says "www.parisfaqs.com" all the time and
never changes at all for any of the pages. There's a name for it and I can't
remember. Obviously the ParisFAQs page though is, in reality, at
<http://homepage.mac.com/osxlover/ParisFAQs/>
somewhere, but you never see that in your address bar. It always just says
<http://www.parisfaqs.com> and the real address that your browser is actually
at is masked underneath.

That's what I meant anyhow. A little extra brainpower revealed that putting
my mouse over the Windows XP Install Notes link showed the real address in
the status bar at the bottom, hence all was revealed, it was just a little
more difficult than getting to the page and copying the contents of the address
bar once I arrived. If you click the link, the above site name never appears
in the address bar. It still says "<http://www.parisfaqs.com>". There's a name
for that and I know it but can't recall right now...

Did that make any sense? ;o)

Cheers,
Kim.

>Hi Stephen,

For a single socket CPU system you will be using a Athlon 64 939 pin CPU. The dual core version of that is the X2 CPU.

For a Opteron dual socket cpu there are the single core chips up to the 254. The dual core Opteron chips start at version 265.

Is this for the Paris? If so it will not work.

If not then it will be easy.

What software and sound card are you using or plan to use?

Do you are you planning on using any UAD and/or TC Power core PCI cards?

Are you doing any sampling/VSTi work or mainly audio mixing and editing?

Feel free to give me a call.

Chris

ADK Pro Audio

(859) 635-5762

www.adkproaudio.com

chrisl@adkproaudio.com This is driving me nuts. I got the Amplitude plugin demo and installed it. At first use I simply applied it to an already recorded track and WOW cooo-hoo-hool !! Then I brought a guitar player in the studio for a session and plugged the guitar directly in track one and activated Amplitude in the Native Plugin section. What the heck??? no effect. So we recorded a dry track, then in playback it's on, but not while we're recording...

It's very hard for a Hard drivin' guitar player to get into it with a dry guitar.

How can we make this thing work while we are recording?

Is there some kind of PRE/Post switch somewhere?

The EDS inserts don't act like this...

Please e-mail me if you can a phone number so I can talk to someone... stevec1@charter.net
Steve

recording.

It's very hard for a hardCan't do it in Paris...AFAIK, but you certainly can do it in Nuendo

Would you consider calling me? (715) 387-6740 or e-mail me your number and I'll cal you? I found your response in some random folder and can't figure out a consistant way of using this forum.
stevec1@charter.netWhere in Paris should Amplitube be installed, so I can use it and here it while the guitar player is recording?
SteveYou can't. VSTs and DX plugs only work on playback. Sucks huh? So you basically have to track all your tracks imagining what they will sound like or render as you go. With guitar it just about useless. Better to get a tonelab se and record with the sound you want.

Steve wrote:

> Where in Paris should Amplitube be installed, so I can use it and here it
> while the guitar player is recording?
> SteveA better way is to use an amp or pod or some other unit to create a playable sound, then DI the guitar signal direct through a mic pre.
Yoy can also record the sounds from the amp/pod at the same time for extra flavour.

David.

>HI Rich,

The latest that will work perfect with Paris is probably what your already using. The only currently manufactured boards that I know of that might possibly run Paris would be the Asus A8V (not deluxe). Haven't tried it myself but I think there might be a couple of folks using them. Also I think some folks might be using the Gigabyte K8N Ultra 939. On the Intel side of things you might possibly be able to find a Asus P4C800-E. Avoid the new dual core chips. Anything that is current will be an experiment as to whether it will work with EDS cards. Some of the current PCI-e boards with 3 or less PCI cards should work but are obviously limit the number of EDS cards. All of the new Mobo s will only be able to run 2000/XP.

The question is if you are only using it for Paris do you really need to upgrade?

>Hey James,

Thanks for namm review, however, I don;t think that the Focusrite Firewire products will kill off the Motu line..Motu's hardware are industry standards with a long pedigree. As well as, having the reputation as being very reliable and have great drivers for both Mac & Win platforms.

The true test of any company making hardware i.o unitss the drivers, then the converters, and so on.. With lame non low latency drivers, all you have is a converter box..

Right now, Focusrite is still to green for to slam so \$\$ into their new products. A safer bet would be to go with the EMU-1820m or Motus 828',RME units even Mackies 410 unit is HOT!!

Take care,
LaMont

>Hey LaMont! All good points. Of corse the Focusrite would have to work well
and sound good for me to buy it. If that turns out to be the case I might
be buying one. I was going to purchase a MOTU 828 MKII, however the focusrite
would be a much better fit for me. The reports on the original saffire sound
good and monitor latency is suppose to be a non issue, in time we'll have
to see. It sure looks cool though!

I sure learned my lesson when I bought the Lexicon studio 32, I don't jump
in anymore. At least I bought it when they where blowing them out. Another
system without support. I too have a studio of the living dead! Now if
I could just find a Ensoniq DP4+ for a real cheap price, those 16 bits sound
good;)

This is mostly a direct Eric/Spectra question but I thought I would post
it to the list. There is (yet another probably the billionth or so) flame
war in the free software community about the GPL3. I'm a card carrying libertarian
free software zealot--who, as a punishment for crimes committed in a previous
life, make most of my living running Windows servers--so I've been following
it. For a fairly non-geeky synopsis check out this link.

http://www.theregister.co.uk/2006/02/06/torvalds_gpl_analysis/

And just in case you think this stuff has nothing to do with you, your websites
probably run Apache, your email mailing lists probably run Mailman, and your
ecommerce shopping cart almost certainly was written using Perl or PHP, all
of which are core free software projects licensed unde

Subject: Re: OT: Not Since Paris, There Has been no Pro (Mid) DSPDAW

r the GPL or something
very similar. All of us who use the web or email in any mission critical
way are in some way piggybacking on the free software movement, whether we
know it or not.

Now then, I don't agree with everything Linus says in the current argument
about GPL3, and I think he has a history of being as unwilling to consider
philosophical problems as Richard Stallman (the main man behind the FSF)
is unwilling to consider some practical problems, but one thing Linus said
that struck home with me was that in his opinion the place to fight the DRM
war is with content. Once there is lots of good content out there using some
kind of non-restrictive content license, those licenses will gain some traction

in the real world as an alternative to the usual "dupe this CD for your neighbor and I'll throw your booty in jail" license we see on CDs now.

All of which dovetails with the fact that I'm planning on releasing some new music of my own in the fairly near future. I was going to just copyright it and send it out into the wild via BitTorrent because I've long since given up on making any money from my music. However, I decided that maybe I could use this as a way to get some other people to think about these issues by using a free content license. Those licenses work much like the GPL works for software, it grants the user the right to listen, copy, and redistribute as they wish. Some deny commercial use, some don't. Some grant the right of users to modify the work some don't, and so on.

I'm planning on using a license that does not allow commercial use, and does allow others to modify the work with the condition that they allow similar modifications on their derivative work. So my Eric/Spectra question is that I assume if I'm allowed to sell a song I make with Atmosphere I'm also allowed to give it away. On the other extreme I assume I'm not allowed to let other people re-use a bare RMX beat. However, how about a pad I make with an Atmosphere patch? Or a beat I program using one Spectra shaker sample and the rest from my own sample library?

I realize I'm asking pretty obscure questions, but one of the reasons I'm doing this is to specifically "get the licensing right," and that means both making my decisions about how I license my material _and_ respecting the licenses I agreed to by using Spectra (and other) products. Since I think Eric and Co. are especially aware of these sorts of things I thought I would ask for some guidance here.

Thanks,

TCB

Right, I hear ya now mate. It's because the site is "masqueraded" because of the way the DNS entry points into my web tree. It is **ALWAYS** better to point people to the main ParisFAQS web page because that "hidden" URL you refer to above will change*. I know it's not as "convenient" to have to scroll down to that part of the page, but hey, look at it this way - you might notice something else on ParisFAQs that you hadn't seen before... ;-)

*I've been building a new site using plone. As soon as I find someone with a web server that provides zope/cmf/plone, the site will move and that url won't be valid anymore.

Will, Pete:

No, go for it. I'm all set here.

Thanks,
CurtHi Everyone,

This is my first time posting and I really could use some help. I just installed a 2nd EDS card and I am getting this message:

"Your EDS cards are not setup correctly and play back may not be correct"

I followed the directions(pictures) as found in a FAQ document I found on the Internet. I also oriented all the red strips on the cables toward the back of the computer as described in the manual. My MEC is plugged into the card closest to the video card and there are 2 slots vacant between the video card and first EDS.

Anyone know how to fix this? Thanks for your help.

MichaelOh,my bad.I see the original post didn't come from you.

Pete

Paris Version?

Platform?

OS?

Number and type of interfaces?

How many ribbon cables did you use to interconnect the cards?

David.

Ver 2.1
PC
Win98se
One MEC
3 ribbon cables 2 long (16 pin?) a one short (8 pin?)

I show Mixer B in the patchbay but it is greyed out when I drag it into the patchbay area.

Thanks for helping

normal.

It is extremely easy to get the ribbons attached being one pin off,
remove and re-seat the ribbon connectors making sure that the pin
alignment is correct. If the ribbons have not been used in a while,
try pulling them on and off the cards a few times to burnish the
connections. The integrity of the ribbon connections is vital for the
smooth operation of Paris.

David.

I may have misaligned them...seems easy enough to do given the size. The red strip facing to the mounting side of the card is correct? I will do it all again and report the results. I appreciate your help.

>Hey folks,

This is sample of artist in development over at my place.
We're having a great time working on singing /arranging techniques
and I'd like to share the results.

<http://www.qbdigital.com/newpvsample.htm>

We've been working on getting the singer controlling the compression
while he sings. There are still problems with some popping and sibalance
and we'll be working on that.

I know there are better ways to do what we are doing, but I'm still a novice
at this.

I'm honored to have good artists to work with and time is always limited.

Thanks for listening.

LanceAgreed, but my harmony knowledge is pretty decent. I'm not great, but I can
hear what, say, Wes Montgomery is doing or what Miles is doing reasonably
well. I can't do it myself but I can say, "Hmmm, that's a Lydian blues lick
of all things."

Personally I think CC is so hard to understand because he was not thinking
about harmony, and especially not about modal harmony as jazz is taught these
days. There's more of that on some of the lo-fi "jam" tapes that exist but
even then he doesn't sound like he's thinking as theoretically as the other
proto-beboppers. But then again, I'm not a jazz player so what do I know.

>Hi all,
I finally had a moment to try out an old 442
interface I bought a couple of years ago and
it is not being recognized by Paris. I've tried
several configurations but no love. I tried it as
the only interface (unplugged the MEC) and tried
every single card (3 EDS cards) and still no joy.
When Paris "pings" the 442, all the lights flash
for a moment and then I get the error message
"...no interface detected by...
check cable connection..." the lights go out

and the sync light continues to flash.

Do you think that I have a bad 442 or do I need to reinstall the Paris software (3.0) in order to get my system to recognize the 442? What else can I try before dumping this piece? Repair maybe?

Thanks so much for your time,
ChrisAttention all computer geeks! ;-)

OK, my question is, when using AMD X2 dual core chips do you have to run XP Pro to take full effect of the dual cores? I know Pro is required for "Dual CPU's" but is it required for dual core "Single CPU's"????? Our XP Home X2 machine shows the two cores in the Task Manager....

Here endeth the question.

Chris

try changing your SCSI cable.

Does your 442 show up in the patch bay device window?Be sure to hit all the arrow play keys for the full effect

Thanks Mark for the link!

<http://www.devilducky.com/media/41727/>

AAHi David,
NO XP Home works fine. It see it the same way it would see
hyperthreading. Xp Home could alway use a 2 cpu machine. The difference
is that it isn't allowed to run on a 2 or more socket motherboard. The
X2 systems are single socket.

(859) 635-5762 CD release party with invitations sent to every industry person this client
knows (quite a few) radio advertizing.... scheduled for March 10. I'm in the
middle of a miserable case of the flu, running 101+ fever and my ears are
worthless. I've got 12 songs to mix and master before March 1 (we're
improvising on a short run of 150 CD copies with artwork for the party
only). Lots of production decisions to be made in the mix. Producer is
leaving town tomorrow and won't be back until the 24th. Mixing this project
is going to be more like doing the arranging myself because I will be making
the decisions as to which of the many good passes of the various instruments
are featured and we've got virtuoso guitar, dobro, fiddle and mandolin
players just going nuts all over this so by I'm going to have to find what
works best where I think it should sit and make the critical decisions that
a producer should be making.....and oh yeah.....I've got a majorly
demanding day job that is breakin' my balls here as well.

I'm going back to bed now.

;oPI wlsh you good luck with all your endeavors DeeJ! Hope you feel better soon.

complete reinstall...

```

I built my AMD X2 4400 system a couple of months ago and have, at least recently had problems with the desktop theme resetting on restart, randomly - one day it's normal, the next, it gets reset. Not a big deal in the grand scheme, but turning system sounds off when this happens is annoying. There are several threads of users seeing this on the MS forum, but no solutions.

Second problem, and probably the more strange and perhaps foreboding - under most user configurable settings (visual settings, folder settings, etc), the tick box/option is missing - each option is there, but no way to select/deselect. My user account is admin, so it shouldn't (that I can tell) be a user access issue. I've built several PCs and never seen anything like this - nothing unusual during install - pretty standard stuff.

Any ideas? I'm trying to avoid rebuilding it as it took a long day to get

it setup with all the apps, VSTi's, licenses, etc, etc, and I don't have time in the foreseeable future to do so. So far it isn't a show stopper but I'm holding my breath wondering if it will become one.

Win XP ProSP2
Matrox P650
AMD X2 4400
2G Ram
1 IDE
3 SATA

Thanks!
DedricHope you get feeling better soon, Deej!!!

CLThanks, Neil.

Mike Durham played all the electric stuff thru an amp, though I can't remember what kind of amp, mic'ed with a 57. Jason Roller played a Larivee acoustic mic'ed with a Studer stereo mic. The vocals they carried over to Nashville's Quad Studios to record, and I'm not sure of what mic they used, but I do know they used a Neve pre and an LA2A comp.

Ummm very weird.

Sounds like something messing up your user accts. Have tried creating a whole new Admin Acct and removing the old one after? This won't effect any programs other than maybe some preferences.

Could you have possibly have installed some hardware or software without selecting it to allow all users? I've things like that cause trouble.

(859) 635-5762 Well I don't have a mix to do...

....but I did just log on to the group with the express purpose of starting a thread in titled "Where can I get a job with no stress?!?".

We've got union negotiations going on here... plus I just pissed off one of the bosses here by finishing work at 3:30 last Friday. The fact that I started early, missed my one hour I'm supposed to get for lunch, and worked basically a 12 hour day for that same job the week before... none of that stuff was of any interest of course.

There's this stuff we use at work called "Snoopy". It's basically soapy water in a squeezy bottle. It's for detecting air leaks. You put a little on the join of the air pipe and if there's a leak it makes bubbles. I saw it and thought "That sounds like a good business to be in. Mix a little detergent with some water. Stick it in a bottle and sell it for \$5".

Surely there's some job I could be in that doesn't contain any stress...

Maybe I could become one of those dudes who runs the elevator...

Cheers,
Kim.

>Hi Chris,

It does sound like that's the problem. I haven't tried replacing the admin account but will. I can't think of anything that I installed that would be user sensitive - Nuendo, Vegas, Flash/Dreamweaver, etc - install is pretty vanilla unless I fell asleep and hit an "okay" button without realizing it (quite possible - esp. the falling asleep at the keyboard part).

Thanks,
Dedric

e Nuendo computer will be mixing and editing.

I was thinking Opteron CPU since a lot of music pros I've been reading about have had great success with them, but I'm not really too familiar with them. Do you know what, if any, benefits that I would see going opteron vs Athlon 64 X2? If I did go with Opteron, should I go dual core? Do you have any different suggestions? How about mobos?

I don't know what you're using now, but for the last two 1/2 years, I've been using an ASUS A7V8x mobo with a pair of Matrox G450 video cards (AGP & PCI) and 3 x EDS 1000 cards. I've used it with Win ME and Win XP with success (currently using Win ME). It's *very stable* and will support up to the AMD XP 3200 CPU. It's the most stable solution for Paris I've ever used and will support a good amount of native plugins if desired. Another very stable solution is the older mobo's with the SIS chipsets. Aaron Allen has had very good success with these. I doubt if I'll ever go beyond this 7V8x mobo. Too many potential issues with the newer crop of mobo's and chipsets. Right now I'm using an XP 2800 CPU. I guess I could upgrade to the XP 3200, but I really don't feel the need.

Regards,

Deej

It seems to not see my CD burner.

i don;t see anyting on the Steinberg site about it.

Anyone know what to do?;o)

Better than Alltell around here sometimes.

> Looks like it might be time to upgrade from my Athlon 2.4GHZ system... there's a place locally that I can grab a P4 3.4GHZ CPU & an Asus Asroc-2 mobo for about \$280 total. Price seems reasonable, but I'm used to Athlons & their better performance characteristics (at least based on anecdotal evidence from users herein). Anyone see any problems with this possible new configuration for Native (SX) use?

I'll probably just strip out the Gig of DDR RAM I have & use that in the new board. Frostsides bus speed should be faster too, since the Epox KHA+ mobo I currently have is about 3 years old now. Anyone see any downside to this conversion?

NeilTrue. I never upgraded my NPP Gold for the same reason - \$250 is steep just to get a new version number in the info screen (that was just to go from 3.x to 4.0 on WinXP). The SSL 4000 is \$600 street, so that's \$200 less ridiculous, and if they are really amazing, it might be worth it for some.

That said, UA has Neves on the way. Pretty cool. It will be interesting to see where their prices fall - I'm guessing \$250 for the 1073.

>The 600 price point sound great. I've heard the online demo, and i can attest that, by the sound of the demo presentation, they've nailed the SSL 4000.. We have one(SSL 4000 Gplus) in our A room, with E Series Channel strips..The plugs behaved pretty much like the board, minus the noise :)

Let's face it, Waves had to step it up, or they were going down in the dust. With UAD, McDSP(My Favorite), URS, Sony Oxford, as well as many , smaller named companies like SIR, Audioease, Voxengo, Sonilakis, PSP..I can go on and on.. Waves had to pull a rabbit(out of you know where:) to stay in the game.. well, game on..

Inquiring minds want to know

DonHi Stephen,
Ahh Ok good. Glad you not trying to get Paris to run on it.
CPU performance between the same clock speed X2 and Opteron chips is pretty much neck and neck. The benefits on the dual OPteron machines, multiple PCI busses, faster memory performance. YOu will also be able to use up to 16 gigs of ram which is nice. You will also be able to use dual core Opteron chips in it so you will have 4 cpus.

Nuendo will not be able to use the Lynx and RME at the same time so I'm not sure what you plan is with that. If you occasionally need to use AES you would be better of just getting a RME DD4 or DD8 format converter for that. Also expect Gigastudio to give you some headaches also sense it doesn't properly support dual cpus. It will work but I would expect so growing pains. The TC should be fine with this setup.

I would not do the Dual core Opterons is you are using Gigastudio. If you don't use Giga then go for it is you can afford it. NUendo will use all four cpus.

The only motherboards for the Opterons worth getting are the TYan s2885

and s2895 models. If you are gonn use duak core cous then you will wanna get the Zalman 9500 heat sinks. Also only use you memory in groups of 4 i.e., 2 gigs = 4x 512, 4 gigs = 4x 1024 ram. YOu will get NUMA memory support which give you 10gigs/sec instead of the normal 5 gigs. Oh and at least a 550 watt EPS power supply. YOu also have to use XP SP2 on the OPterons to get the most out of them for the memory support.

(859) 635-5762Hl,

C-16 issues mostly.

If you are using the new board make sure you flash to newest bios as soon as you get windows installed. Also use the newest Nvidia chipset drivers from Nvidias web site. You will need to use the AMD X2 processor driver also.

You should check the new board for any signs of it being a refurb. The Nforce 3 boards have been out of production for almost a year. Pretty much vendors are just sell thru left over stock and getting refurbs from Gigabyte.

I've used convolution verbs in paris, but used pre-rendered tracks. I totally forget how I did it though.

Cheers,

Kris

www.adkproaudio.com
chrisl@adkproaudio.com Thanks Chris,
Actually I ordered a Opteron Dual core 165, not a X2-dual core. The Opteron
should work, since it's a 939 socket??

Chris Ludwig <chrisl@adkproaudio.com> wrote:

SteveHI Lamont,
That chip will work on the 939 mobos but you will still have to make
sure you update the BIOS.

ADK Pro Audio

(859) 635-5762

www.adkproaudio.com

chrisl@adkproaudio.com I use the Gigapulse (part of GigaStudio) that can be used as a stand-alone

convolution reverb with good results (could also use more impulses), but since it is on another computer creates about 60 ms of latency. I can listen and tweak

I used to live on Riverside right on the river off the Parkway. Below where the bad landslides were last year. I'm central, close to LGH now.
I also lived in the Cove for a time, it's nice down there.

Cheers,

TC

Looks very promising. Downloading now. Thanks!

CurtHey DJ-

Do you have any of their other plug-ins? Those are great prices, so I am just curious about the sound quality, compared to PSP or Kjerhaus or Waves... Thanks,

Chris

Do I have to uninstall my old version.I selected the uninstall ..exe in the PARIS PRO folder,but it looks like that's just the fx subsystem.

Will a reinstall affect my FXpansion wrapper or UAd PLUGS?

TIA,

PeteNot to be a pessimist, but I've got the DB de-esser, and it's ok at best. Better than nothing. My DBX 263 hardware unit blows it away. I paid only \$60 for it, too.

Just a thought.

larger drives and have upgraded my CPU, but it is still only running at
1400mhz. That's as fast as it will ever go. I'm behind the times and would
like to take advantage of the newer MOBOs which have firewire built into
them. Things have progressed quite a bit since I built my Paris system. Time
to get on the train.

On the cheap, try Amazing Slow Downer for Mac

<http://www.ronimusic.com/>

Maybe Melodyne???

<http://www.celemony.com/cms/>

Apples SoundTrack maybe???

chrisl@adkproaudio.com Yes, but make sure you back up all your effects presets first, if you
have any. Usually I copy the entire Paris folder to another location
just in case.

David.

I just never upgraded, don't see the point in rocking a floating boat. In
fact though, I loved the chipset so much I built a windows 2003 server
around the A7s333. If you can find one of these, it rocks. However, make
sure you use quality RAM with it, it's quite picky about that.

First of all, thanks so very much for taking the time to enlighten me - it is GREATLY appreciated.

I checked out the Tyan mobos, and like the looks of the S2895, but am unsure if that is the way to go due to the 2 PCI-E slots. I am extremely out of the loop with PCI-E, except to know that it allows for killer graphics. I assume that PCI-E is not backwards compatible with PCI. I just don't want to be losing out on slots if I don't have to, or have to put everything into my Magma chassis. Then again, I don't have to install a SCSI320 or Sata card or USB 2.0 or Firewire Card, so I guess I should count myself lucky. I guess you're damn if you do, damned if you don't. :)

PCI-E is/will be the replacement for PCI. It has a much higher bandwidth

than PCI or PCI-X. YOu'll mainly see high powered devices like video, audio and drive controllers being used for PCI-E slots. Magma is releasing a PCI-E to PCI card for use with the current Magmas. It still in the testing stages though. Most all sound card and DSP card makers will see PCI-E version of current stuff and/or new devices all together by the end of the year.

I would advice getting the version of the board without the on board SCSI if you really need to have SCSI us your card or get one of the new PCI-E based ones. The on board SATA controller work great.

(859) 635-5762The theory behind convolution is to sample the exact acoustics of a space
from a specific position. The most natural sounding adjustments are made by
changing mic positions to affect the wet/dry mix. In a console style
effects bus, part of the signal is routed through an all wet signal path and
mixed to taste with the dry signal. To treat convolution the same would be

like taking an instrument in a hall and mixing it with an instrument in a booth. The reflections will not match.

That said, an impulse from a plate reverb will probably work better on a bus, because it is much less com

(859) 635-5762 Bought a pair of these dirt cheap at the local thrift store, but one has no low end. Is it worth it to get it fixed? I read somewhere that they might be a lower-power version of the NS-10 - anyone know about these? Tom Bruhl wrote:

> Thanks Jamie. Is it Pace?

Don't know, but it creates a number for each system based on system components. Unfortunately, one included component is the system hard drive. Probably THE most likely component to fail or be changed out.

I have a lot of NI instruments. I lost a system drive. This has been a hellish week getting them all reinstalled and re-registered.

Email tech support was slow. Luckily they have phone support. Phone support was about 75% accurate in what they told me to do. I was probably the same in what I did. Consequently it took hours to get the system where I could use the instruments again. By far the longest ordeal of any of the software I had to reinstall.

A big plus is that NI allows you to use both a laptop and desktop system on each license. Problem is figuring out which is which when it comes time to use their online system to remove a license so you can re-register with the new configuration. Their policy is that if you remove an authorization you can NEVER use that computer again. Better not get it wrong.

The only way to get it right is to run a program, look at a 36 or so digit number and see if it matches, visually, with the already registered number. For each plugin. For the ones that include that program, which isn't all of them.

The numbers that change are buried in the middle.

Then you have to navigate the online system, stepping through redundant pages, for each plugin. Then, after reinstalling, you have to download and reapply all the updates.

Bottom line, after hours of phone time and installation time I almost have them all working again. Still have to get one recalcitrant plugin to install and one large sample library that for some reason won't read off a DVDR, (and I have two copies of the DVDR - both fail - weird). And some of the plugins don't yet see their sample libraries.

Other than those hassles, I love the NI instruments.

They did tell me they are working on improving the registration system so it actually tells you which reg is for your laptop and which is for your desktop. That would help.

I think a dongle-based system would be a bigger improvement.

> I wonder why they don't include TX7 in their literature?

> I think it's identical to a DX7 minus the keyboard?...

> Maybe it will be a problem for me.

No worries. A TX7 is indeed a DX7 minus the keyboard.

> just won't let me. The best price I've got on
> FM7 is \$269.00 Anybody have their go to sites
> fo a lesser expensive option?

I still have two Amiga 3000 towers.

NI Komplete may be a better deal, IF you have use for the other instruments.

Cheers,
-Jamie

> I've heard great things about the EMU card as far as fidelity goes. I've also heard some bad things about it as far as the digital protocol goes. Seems it doesn't somehow adhere to the ADAT spec so if you're planning to interface it digitally with Paris via ADAT, there might be issues. It doesn't have an ADAT sync input so clocking it could be an issue unless you were clocking both the EMU card and Paris to an external clock. The MAudio ought to be pretty strack as far as being compatible with whatever spec you want to use. It's a bit more \$\$\$, but I'm very pleased with the RME stuff and I have also used the LynxOne. If you don't need a whole lot of I/O and sample rates above 48k, the LynxOne is an excellent choice. I have actually clocked Paris from a LynxOne and I have also daisy chained a LynxOne from a Paris system with no problems. Lynx and RME both make great stuff.

>Hi All. I am considering trying something I never done before. I have my Paris in one PC with just one EDS and a MEC. I am building a separate PC and it will also have 1 EDS card and separate MEC. I want to keep them as separate units, but I want them to talk to each other... meaning 32 channels (16 channels each). I know I can put the 2 EDS cards in one PC, but I want to keep them separate.

I never done this before and I need some advice. Since each PC/EDS/MEC will be separate... each will have their own dual monitor.. what do I need to do for both to work together.. (meaning 32 tracks/channels). I believe I need to put a BNC cable between both EDS cards... but is that all I need to do? Actually, I am not even sure this will work.. of course if I hit play, and I have 32 channels (16 on each PC)... will my main EDS know the other 16 channels? Perhaps I am asking too much or not enough information? I am on Win2000 (both PC's). Yes, the Paris XP driver works fine with Win2000.... any help or advice? Adequately represented in the stream? I plan to s/pdif from the sequencer computer to the PARIS computer. I have never done any digital transfers before, so am not sure what sync issues may arise. Are you saying the digital data will provide its own sync?

Thanks,
Edna

I was just alerted to this. Apparently 'round the clock mp3s of old Filmore and Winterland concerts by everyone who ever played there.

Really.

Just heard some Mothers of Invention and Stevie Wonder from '70 and 73. This is great stuff.

<http://www.wolfgangsvault.com/>

-steve

oh, and if you're so inclined, they'll sell you the handbills, posters, whatever, for an arm and a leg What I meant is that the lightpipe cables would carry the sync and you would not need the 9 pin. If you are going spdif then you should have no concern about the ADAT 9 pin whatsoever.

>Bill,

ADAT sync carries it's own clock signal irregardless of whether is it timeline locked via the 9 pin serial cable. I have heard that the signal that is imbedded in the bitstream of the ADAT output (using a fibre optic cable sending 8 channels) of the EMU card may not be reliable. This was being discussed on the RME website a while back so consider the source I guess.

>Edna,

SPDIF carries it's own imbedded clock signal. You can, in theory, set Paris to receive *digital* clock in the Paris control panel, and it *should* sync to the spdif output of another device which is feeding it's signal to the Paris spdif input. This won't lock up the timelines of two DAWs, (only ADAT or midi sync will do this) but if you're just inputting audio into PARIS via spdif, it *should* prevent timing errors like clicks and pops.

the 'wet' component of the reverb. There is no input signal present (i.e. the impulse itself is removed from the impulse response) there is only reverb/reflections. You can use the wet/dry blend to simulate how loud you make your room mics relative to your close mics.

Cheers,

Kris

With respect to RZ, this explanation of convolution is very different from my personal experience. I have been using hardware and software convolution reverbs since the Sony DRE-777 first came out... and Altiverb since it first came out (the original hardware and original software). Both were designed for, and work great in bus situations, as do all convolution verbs.

I also have GigaPulse. It is true that GigaPulse is designed to allow manipulation of mic position (and other parameters) while keeping the input/output mix fixed (as a recommended option with true acoustic spaces). In theory this will give a consistent sound stage, and I like using it that way.

But:

This is certainly NOT an appropriate generalization to use when talking about convolution reverbs.

Gene

PS The 777 still sounds great and can be found on eBay very cheap. It was originally around \$15K. First thing in my inbox this morning.

-Doug

<http://www.parisfaqs.com>Steve,

My solution to this is called a Radial Switchbone. One guitar input, two guitar outputs. I send one output to an amp and track with effects so that the player can have whatever he wants to hear in his cans. the other output is routed to preamp and recorded clean. Not necessary for the player to be hearing this one. Then after recording, I can open whatever (Amplitube, Nigel.....name your poison here) on the uneffected track and use one or both of them in the mix. Also, the POD XT Pro has a dry channel output. Quite a bit more \$\$\$ than a switchbone, but with some advantages of it's own. I think, for the purposes of achieving wretched excess, you could run a guitar into the Switchbone and split the output of the Switchbone to both a miced amp and the POD XT Pro, record both the amp and the XT PRO with FX plus also use the dry channel input out of the XT Pro as well. I think you could probably also get two Switchbones, run the guitar into one of them, send the outputs to two more Switchbones which could then be sent to two amps and two POD XT Pro units so that you could simultaneously record 4 effected sources and two dry sources.

;o)

A plugin version of the SPL deesser used to be sold as a separate app, then was sold only as part of VST. I've been looking for this, because, I understand that their hardware version is great.

I've used this before (easy recovery pro).

<http://www.ontrack.com/>

The more that you've written to the drive since though, the harder it will be to recover.

Hope that helps. Somebody else may have some better info here.

Cheers.

Did you hear about the woman who backed into an electric fan? Disaster!Gotta question for ya.

I just got Cubase 1.06 from a friend who upgraded to 3.0 and I've noticed
 that when I'm monitoring in Paris via my Dakota I get occasional pops.

Any idea what might be causing this

Don't think I'm going with the new Boss RC-50 Loop Station:
<http://www.bosscorp.co.jp/products/en/RC-50/index.html>

(Gotta wait till it's released here in Oz)

Somewhere (I forget where-probably the project menu) in Cubase 1.06, there
is an area where you can match the buffer settings of Cubase SX to your
Dakota card buffer settings. I couldn't get it to sync without matching
buffers on both the Cubase app and the Dakota crd control panel. IIRC, the
best setting I found was 512k for both SX and the Dakota. This should work
fine for you as long as you are just playing back midi tracks. Connect a 9
pin serial cable from the Paris ADAT output to the Dakota ADAT sync input,
set the Dakota to sync to ADAT, hit the transport on your C16 and you're
good.

I'm looking for something that has rollers so I can move it

Space for PC - dual monitors and Near fields
12 rack spaces in on/under the desk to keep it portable (so it can move without plugging/unplugging from 2 other racks I have
any idea's would be greatly welcomed... what I'm using now is just not working!

also I'm not experienced with woodworking at all so I don't think I can build

Thanks!! Looks cool. No downloadable manual yet. I wonder if the three phrase channels would let you live-switch between song sections?

Let us know how you like it.

Cheers,
-Jamie

Let me start by saying I am new to the softsynth world.
FM7 seems to be the program of choice for 6 operator
DX7 sounds. If there is something better please tell me.

I have two hardware TX7s (same guts as a DX7)
and over 1,000 third party/personal patches stored on my Amiga. =20
Is it possible to load patches into the TX7 one 32 patch bank at a time
and upload them to FM7 via MIDI? If so can they then be stored
as banks on my Windows PC?

I get no help from NI since I haven't purchased yet. I haven't found
any manual on the product either. If there's a link to the manual
that would be great also.

Thanks!
Tom

>What he said... If your sync is tight but playback of VSTi's out of
Cubase is glitchy it's likely you're exceeding capacity of that
system. The engines are buckling, Captain. Set latency low for
playing/tracking VSTi's, and set latency high for playback... Also,
I'd render one or more of those VSTi tracks out of Cubase and drag 'em
into Paris as audio files... That's "Export Audio" out of Cubase --
with the track you want soloed, and markers set to top and end... Snap
that audio file into your Paris editor on the right bar and you're
good to go... If you need to make changes later, get back in Cubase,
edit, alter, whatever, export and so on... I once imagined a system
where I could play whatever number of VSTi's I might want out of
Cubase in sync with Paris, but I found that I always ended up wanting
them over in Paris as audio files when it came time to mix anyway. I
still like reaching for a fader, and I think there's something going
on with the Paris mix mojo, when it comes to pulling everything
together and making it all seem "real"...

Whew -- long note for me -- coffee's workin' good today.

good luck with it -- Chas.

Thanks Jamie. Is it Pace?
I wonder why they don't include TX7 in their literature?
I think it's identical to a DX7 minus the keyboard?...
Maybe it will be a problem for me. =20

I'm trying so hard to get rid of my Amiga but it
just won't let me. The best price I've got on
FM7 is \$269.00 Anybody have their go to sites
fo a lesser expensive option?
Tom

"Jamie K" <Meta@Dimensional.com> wrote in message =
news:43ecdfe8@linux...

Hey Tom, should work fine. Here are some bits from the FM7 manual:

"The FM7 can accept System Exclusive Data (preset parameters) from=20
Yamaha's DX7 DX7II and DX200 synthesizers and convert the sound to its=20
own parameter format. In standalone mode FM7 automatically receives =
any=20
MIDI SysEx data in the recognized formats...single presets go into the =

edit buffer and need to be stored manually while banks go into the=20
currently select bank of 32 presets. Another way is to load the SysEx=20
data from a file..."

I love NI's synths. Hate the registration system.

Cheers,
-Jamie

Hey=20
 Tom, should work fine. Here are some bits from the FM7 =
manual:

"The FM7=20
 can accept System Exclusive Data (preset parameters) from
Yamaha's =
DX7=20
 DX7II and DX200 synthesizers and convert the sound to its
own =
parameter=20
 format. In standalone mode FM7 automatically receives any
MIDI =
SysEx data=20
 in the recognized formats...single presets go into the
edit buffer =

and=20
 need to be stored manually while banks go into the
currently =
 select bank=20
 of 32 presets. Another way is to load the SysEx
data from a=20
 file..."

I love NI's synths. Hate the registration=20
 system.

Cheers,
 -Jamie

-----=_NextPart_000_038B_01C62E4B.6775DC00--Hi Rich,

I've been using a desk from Anthro in Tualatin, OR for over 10 years. They make incredibly heavy-duty stuff and are widely used in hospitals and medical offices as well.

Here's a link to their site. Sturdy, movable, and attractive.

http://www.anthro.com/_applications/ContentCreation.asp

>Hey Kim

1.8 gig Pentium with a gig of ram on XP completely stripped of all non essential crap.

I get pops at 256 &128 - anything less and it's noise over the synth sound.

I have on loan Absynth, Hypersonic, Korg legacy collection, Kontakt, Halion,

NI - Pro53 / B4 / FM7 / Battery as well as Reaktor (I believe)

Latest project is with Absynth - two midi tracks - one sound and Battery - three midi tracks - one patch - pops occur randomly i.e. no midi correlation to pops

>THanks Kim...missed ya all dayYeh, not sure what happenned there. Machine shut itself off. I think there's

something funny going down with the UPS at this new place, and that it may be causing some funny power issues which cause the server to do weirdness. It's happenned a couple of times since I've moved.

Sorry it took so long to get us back up. I was away all weekend and didn't check when I got home. Wasn't till I went to work today and went "DOH!".
;o)

I'm doing a backup of posts to the backup server now just to be sure...

Cheers,
Kim.

The server scared me there by not wanting to start up. I had to pull the power and wait a minute. Definately some power wierdness of some kind I think. Something's not playing ball.

Tommy is one amazing player. I haven't heard much of him over hear of late actually. He used to appear quite often on Hey Hey It's Saturday, a saturday night variety show over here, but that got canned quite a few years ago now and I've heard little of him since. No doubt he's still impressing people somewhere though. Sounds like it's over your way. ;-)

Cheers,
Kim.

>Picked up a new Gigabyte mobo with an Athlon 64 3000+ (combo
deal, came packaged together in the same box, so compatibility
issues can't be the case here), and I can't get the BIOS to save
CPU overclocking settings. Anyone know this kinda stuff really
well that might be able to help me out?

I've tried both entering it manually at boot-up, and also the
EZTune windows utility that comes with the board, but neither
one has worked. Settings don't get saved & it still runs at 2.1
GHZ instead of the 3 GHZ equivalent that should be able to get
out of this CPU.

I used the same DDR RAM sticks that I had in my old mobo...
this couldn't be the problem, could it? I know this board can
take PC 3200, but the RAM I currently have in there is a bit
older - maybe 2700 (not sure - would have to verify that).
The RAM shouldn't place any limits on whether or not I can
overclock this puppy, should it?

It's a Gigabyte GA-K8U mobo with a ULi M1689 Chipset, running
on Win XP Home, two sticks of 512k DDR DIMM's. XP is up-to-date
except for I have not installed Service Pack 2 (actually, tried
to install it yesterday when I first noticed it came out, but

had to boot into "safe" mode & revert back to the state prior to the install, since Windows wouldn't boot up normally after installing it).

NeilHey guys,

Check out this Nashville up & comer's website. These are some artist demos we did about three months ago. Her music page has some downloadable "hi rez" mp3s. And not only is she an attractive gal, she was very sweet and personable, too.

www.charlabethcorn.com

CLPretty slim for a VSTi machine... try upping the setting on the Dakota from 256 to 512. You do realise that if you have any of the VSTi's showing in the Instrument window, they draw CPU power even if there are no MIDI tracks running at all. Try activating only ONE VSTi at a time.

David.

If I remember correct, Athlon 64 3000+ is working at 2.1 GHZ. 3000+ is just
a way to show it have the same speed or better, as an Intel 3.0 GHZ.

 project was Absynth, Hypersonic - 10 tracks and when I added Battery 2 and
 went to play along (trying out ideas) all hell broke loose re: digital
 distortion.

For the record this machine wasn't supposed to house all these VST synths
 but the synth fairy dropped by and well, I just couldn't say no so the game
 plan is to ramp this cubase rig up to a 3+ gig machine in the very near
 future.

Will try upping things to 512 and see what happens fingers X'd

>I know what you went through Thad. When I was really young I was in a band
that had me learn a lot of solos note for note. There were some solos I
could not figure out what the guy was thinking, and the missing
understanding was the harmonization. I did not understand the chord
progressions. Most rock players start out with the blues 1/4/5 progression
and never learn about the 2/5/1 progression that jazz uses. The real fun is
when you play the 2/5/1 inside a 4/5/1 - bebop blues.

>In order to insert external hardware on a playback track,
you have to connect the input of the external device to a
physical output on the 442, MEC or output modules. The
output of the external device is then patched to a matching
input on the same 442, MEC etc to complete the loop. In the
Paris patchbay, you make the software connection for the

insert point. The track insert EDS effect "External" would also need to be selected to make this work.

What is your Paris hardware compliment?

David.

Really great mixes. I love the toms and snare. As others have said, everything seems to have its "place." Very impressive.

Hats off,

CLLook if there's bios updates or other updates for the motherboard. Havn't any experience with Uli chipsets but can overclock my A8V Deluxe/VIA K8T800 Pro with 3.8 Athlon dual Processor up to 4.2. Maybe you can get some more ideas here to find out more: <http://www.sysopt.com/>

Good job Chris! Just curious, where are you located? Nice job, DeWd! :) Really great sounds & mixes... is the rhythm guitar on: "If it Mattered to Me" a modeled tone, or at least recorded direct? Just wondering - it has that kind of characteristic.

What was your signal chain for her voice? It's a nice straight-ahead vocal tone without any over-coloration of any kind.

As other people have mentioned, nice choices on sounds overall across the board on all the cuts... "It Don't Help" is my personal fave, I think.

David,

I read that it wasn't needed with the XT. Maybe that's wrong.

I didn't see any chips floating around in the box.

could use MIDI
sync for timelines. Have no idea of how "tight" it is or needs to be? I
understand that the 9-pin ADAT sync would be the tightest. A LynxOne card I
just missed went for \$157 on Ebay. Something like this I could swing. I
may have uses other than just into PARIS, so I would like to have something
that sounds good as well. It seems a number of folks have had problems with
Dakota and PARIS, so I haven't been looking at this one. If I had the \$\$,
RME Multiface would be it. For cheap, the Audiophile does seem to offer a
lot. Does the EMU 1212 have decent MIDI sync?
thanks,
Edna

Have you tried it on the motherboards built in USB?
It is not a USB 2.0 device so you might be getting some misbehaving from
that.
What motherboard are you using?

Hey Chris,

It's an old KG7 with USB 1 so I invested in a=20

USB2 PCI card to bring it up to USB 2. Was that
wrong?

Tom

"Chris Ludwig" <chrisl@adkproaudio.com> wrote in message =
news:43f539d7\$1@linux...

Hi Tom,

Have you tried it on the motherboards built in USB?

It is not a USB 2.0 device so you might be getting some misbehaving =
from=20

that.

What motherboard are you using?

Also, as far as the soundcard is concerned, I was also looking for an inexpensive way to get 24-bit A/D into PARIS when desired, w/o having to spring for the 8-in PARIS card. Thanks again for the help.

Stevel'm currently using direct x 4 with 98SE. Works great, but new burn
software wants to install directx 9. Any issues with higher direct x
versions?i almost hate to say this but i have to buy another mac for DP, Logic
and PT.

>Hi all

If anyone knows how to get ahold of Matt Craig, ask him if it's ok if I release
the Beefy Reverb as freeware. This was a two year labor of love on his part
in porting the "pro" reverbs from the DP pro including byte for byte translations
of all the presets. It takes up an entire DSP chip, but it's worth it.

Chuckmmmmmm... beefy..

Thanks for releasing these Chuck. Very nice of you.

Cheers,

TC

Gee, Kent, I'm blushing.

Thanks! CLThis should be the link to download the "hi rez" files:

<http://charlacorn.com/newmusic/>

>ChuckHi Edna,
None of the EMU cards support ADAT Time code sync. They do have a poorly implemented ADAT clock sync ability though. Don't confuse digital audio clock with time code clock sync.
The Frontier Designs Dakota, RME HDSP9652 and Digi9652 are the only cards that have built in ADAT Time sync. But none are cheap and none have analog I/O only ADAT.

The best cheap sound card from the description of what you need would seem to be the M-Audio Audiophile 2496 PCI card. It's 99.00 has rca analog RCA and stereo SPDIF and Midi I/O.

If you are going into Paris's SPDIF connection then it really doesn't matter how the built analog sound sense you will be listening to Paris's converters.

You can use the Midi if you need to sync the time code between the 2 machines.

There are tighter time code syncs possible but then you have to spend allot more money.

Chris

I purchased this (knowing there are driver issues) by someone's suggestion to buy it. I have spent four days now and have come to find the USB signal gets lost very easily and the unit is rendered undetected. This means all hardware synths stop. If I do a sysex dump it loses connectivity. It also crashes hard and fast to a black screen if I touch any buttons on the "Mute" screen in Clockworks. Clockworks is the software that controls programmability. CW also loses touch with the hardware during these activities. A quick fix seems to be an Off/On button push. That's a little extreme 3 or 4 times in a song...

Motu drivers are v2.51 on Win XP Pro with Cubase 2.0?. I am using an AMD 1700+ with a PCI to USB 2.0 card installed.

I haven't bothered syncing with Paris yet. That's not an option the way things have been going. =20

I tried to have Cubase filter sysex data but whenever I do a sysex send to a hardware synth the "Computer" light on the Motu lights up. I think if I could filter sysex from not only Cubase but the 'Motu trying to send to Cubase' I'd be better off. As I understand it the=20 Motu is always sending/returning all 8 ports to and from Cubase.

t with, but my testing seems to show that
it puts about 10% more load on the highest numbered CPU, which is a small
price to pay if it solves a driver issue, especially in a dual core or cpu
situation.

Just wondering....

MikeCongrats...I'm sold...

>Hi Mike.

I ran into this flag a month ago but haven't had a chance to test it during a session. I actually ran my last session (recording scratch tracks of my wife) without the C16 - just forgot to hook it up and never took the time to

shutdown PARIS once we got rolling.

When I found the switch, I also tried another switch (/onecpu). I'm about 80% sure one of these does the trick. That night I tried it and played through a project, trying fast moves on the C-16 - didn't see the problems I had before of the transport locking up.

Hopefully someone using the system a bit more fulltime will have a chance to try it out.

-Rohde

I still have reliability problems. Would you be so kind to paste your paris.cfg and tell me what cpu/memory type config you use. How reliable is Paris for you?

In fact, anyone with a reliable system, please paste your paris.cfg and your system setup. Thanks and great luck on the new CD Jason.

David,
I looked inside and there are no 8 pin chips that say PC or MAC.
I also didn't see any dip switches. =20

I did talk to Eric at Motu. His take is to eliminate the variables. I =
removed
the USB 2 PCI card and am now using it with the onboard USB 1. So far
so good. I also reinitialized it just to start from ground zero again. =
I may try another
USB cable too. The one I'm using came from Motu.

I haven't reinstalled the software or tried the mute switches because I =
have to much
work to catch up on before I can continue to trouble shoot. I suspect =
there may
be an AMD or mobo issue I'm dealing with here that isn't compatible with
this Motu piece. Who knows.

Thanks for the tips and I'll keep you informed as to my progress.
Tom

"EK Sound" <askme@nospam.com> wrote in message news:43f5f36e@linux...
We have that exact unit here and had to swap out the rom chip for it=20
to work with the PC. Pop the top and look for an 8 pin dip that has a =

sticker on the top, it will clearly be labeled MAC or PC. It is=20
possible that they have developed a generic rom negating the need for=20
different chips, but it wouldn't hurt to check.

David.

Is it necessary to have BNC terminator plugs on the unused MEC BNC output
jacks in order to have a stable rig?

I have a 4-card/3 MEC system, with two Kurzweil boxes rigged in and clocked over SPDIF via a digital patchbay, and while I can always get things running smoothly after several reboots of Paris, I tend to get long stretches of nasty digital hiss or digital clicking or submixes not playing before things settle in after the 5th or 10th Paris reboot.

Also, would it help to have a physical interface on all cards? I have a 442 laying around somewhere I could hang off the 4th card.....

Thanks!

JimmyThanks LaMont, I'll check it out. . .

> Peace, JasonNawwww.....just a little slow on the keys tonight. Cough syrup laced with phernegan and codiene tends to make me a bit sluggish and out of phase....but it's definitely taking the edge off this flu, which has evolved

into walking pneumonia and a serious sinus infection.

In a nutshell.....don't daisy chain MECs from a house clock. Use individual clock outs to the individual clock ins of the MEC

I terminate my MEC inputs.....don't know if it's totally necessary, but I do it and it seems to have added stability.

Leave your house clock set to 44.1 (if that is what you're using) and set your default .ppj to 48k. Don't argue or wonder why. Just do it. The system should sync reliably if you do this and it will definitely be unreliable if you don't.

The 442 may add *instability* to a situation like this because it will initialize at boot up of the computer whereas the MECs initialize when you start Paris. I only had luck with a 442 on my multiscard system if the 442 was attached to card A. Still, it could have been for other reasons, so it wouldn't hurt to give it a try if you need it. There is no reason though that you should have to have it if it's not necessary.

My HDSP Multiface has a 9 pin ADAT sync input. It's the new Multiface II

units that don't have the ADAT sync.

for interrupts. You still get most of the advantage of a dual CPU system,
but the PARIS driver might work properly.

Let's hope!

codeine left over....oh, never mind....

It's a no-go. Set default project to 48, same basic problems.

I'll have to order the BNC terminator caps. Athens is too po-dunky to carry
such things.

Couple questions:

1. What's the maximum length for SPDIF cables in my scenario?
2. Would adding a 4th MEC set things up in a more stable sceanario?

I guess worst-case scenario is running the two Kurzweil boxes via analog. I wish to god they had just put BNC connectors on them. I don't understand why the whole system will work perfectly one time out of ten....

Which one, or does it matter?

Jimmy,

I think it is a fact that you always want a MEC plugged into your
last EDS card unless you only have one. I find this to be true
even without an external clock.

Tom

news:43f8dfb6@linux...

Actually, having the 3rd MEC plugged into the 4th EDS card seems to, =
in

fact, increase the likelihood of everything working....by a little =
bit,

anyway....

project.
 However, if I close the project and try to reopen it or =
 another
 project, things get squirrely, either digital distortion on playback =
 or
 my 2nd submix not playing at all.
 2. With two =
 Kurzweil
 boxes patched in (and clocked) via SPDIF, things are
 squirrely =
 from
 the get-go. Sometimes it works perfectly, sometimes =
 not.
 When it works, it seems to be after intial start-up of Paris only; once =
 again,
 re-opening a project is sketchy as hell, with a few
 exceptions.
 3. When I patch the Kurzweil boxes thru a
 Digipatch digital patchbay, it's the same as scenario "2", =
 only with
 even fewer instances of success.
 I have tried =
 connecting the
 3rd MEC to card 4 instead of card 3, but that
 seems to have no =
 effect.
 I have no BNC terminator plugs on the MECs, =
 and plan
 to order those
 tomorrow. I have some small hope that these =
 will solve
 some of my troubles?
 Anybody have any further
 suggestions?
 Jimmy

What do you mean "which one"? Paypal is paypal far as I know. There's no "which one?". Unless I'm missing something...

Cheers,

Kim.I believe there are a couple kinds. Its been awhile but as I recall, one is just for buying. The other includes selling as well - business account which requires bank account verification. They are both free, except you pay a commission when you sell.

>Do this:

```

In your paris.cfg file, add the following line:

```
UseHouseSync=1
```

Now reboot your computer and double click on the Paris .exe in the EMU folder inside your program files directory.

When Paris launches, set the sync source to Word Clock and set the sample rate to 48KHz.

Save this in the EMU folder under the name "default project.ppj" (no quotes). Now, before you close it, save it again to your desktop under the exact same name.

Close the project and turn off your computer. Now turn off everything else that is connected with Paris digitally, including the MECs.

Now do the following:

1. turn on your Kurzweil units (and any other processor that is interfacing

digitally with Paris)

2. set your WC module to 44.1, turn it on and let it initialize

3. turn on your MECs

4. boot your computer

5. launch Paris from the default project.ppj on your desktop

Once the 48KHz default project is open, go to one of your 44.1KHz projects and open it. You should be good to go.

This works flawlessly for me.

Good luck.

> http://www.huffingtonpost.com/paul-hipp/cheneys-victim-sings _b_15948.htmlDoes anyone else
out there own a behringer X-2000 patch bay?
```

The reason that I ask, is that I've just wired one up, and I've noticed that if an A/B pair is set to "normalled" and then the signal is interrupted by patching a cable into the top jack, the signal that comes out of the top jack is ground lifted. This adds a shitload of noise to the signal. If I change the channel's setting to "open," the ground is connected properly.

So, I can make things work fine by switching the channel to "open" if I plug a cable into the front, but is this normal for a "normalled" patch bay to lift the ground when a patch interrupts the signal?

Thanks for any insight into this!

MikeOkay, I understand..

What are the directions for this mod??

I thought it was obvious that it was MEc !

Yes indeed this is for mec only , MR Petinato (did I rememer his name right ?) kindly sked me some god time ago for a photo but since I lost my mail contacts I thought of posting it here s maybe some others could benefit from it.

Yes if you don't know about elctronics don't do this by yourself.

Even with a power off you could get a small bump from the electrolytic.

This mod gave me a better transient response , not so softening sound from Paris converters.

If anyone could send me the email of Mr Petinato the uy that sells Paris stuff so I can post this directly to him...

Thank you and sorry if I upset you somehow with no explaining from the very start.

Regards,
Dimitrios

sheesh...i gots to write these things down...yeah right.I've noticed that the power around here is a little unstable, but of course that shouldn't be a problem for the news-server as it has a wonderous UPS on it... ;o)

Well we just got a power glitch here an hour or so back, and when I went to look at the server, "Uh oh!", out of action. I know the UPS does it's job at times as, for example, last night I shut down the mains at the meter box for a few seconds and the server kept running fine. This power glitch today was only about a second, so I can't see why it would make a glitch...

....but between the server, the UPS, and the power here in this house, the combination isn't happy. Something in the constant power glitches that seem to haunt this area manages to get through this particular UPS enough to effect the server. I'm suspicious changing any one ingredient would be enough to fix it.

Looks like I'll be shopping for a new UPS shortly...

Cheers,
Kim.UPS SUX...well it did for me and i don't know why i still have the dead one in the studio. i need direction in my life.....sigh

CREDIT CARDS.

If you get any other account they ding you a percent of your asking fee.
People with credit cards can get their own paypal account and pay the
percent and then transfer the correct amount to you.

Skiing
anyone?

JohnMake sure you get one with automatic voltage regulation and
enough range of compensation to deal with sags and spikes.

That could be your problem. We put them on the DSP processors
in our sound installs and they save a lot of service calls.

And of course, make sure there is enough current capacity.

Frankly, we should all help you buy this.

>A couple of days ago I did some tracks for a client and burnt a CD-Rom containing
wave files for him to take to another studio to do some other work. It was
labeled "Data CD".
I explained how all the files were perfectly synced so the protools guy could
drag them in to his session.
Five minutes after he left my house he called, saying "I just tried to listen
to this in my wife's car, and she has a REAL good CD player, and it won't
play".
To which I say....."It's a DATA CD"
"Oh....it's a data CD?"
"Yes, whould you like an audio CD so you can play it for your wife?"
"Yes, maybe that's a good idea"
So he came right back and I burnt an audio CD for him.

The things you have to put up with sometimes.

---=_linux43f9f312--They do have a limit though, I believe \$500. With the Premiere or Business
accts, they are able to use CCs, a big issue for some, and don't have to
have a Paypal account. You can add the ding to the sales price.

"John" <no@no.com> wrote in message news:43f9cc33@linux...

high schooled in Winston-Salem. Wish I was still in those parts, instead of
fucking Georgia.

Growing up on a farm in the mountains was a trip. We would miss at least a
month a year of schooling because of snow, some years.
