Arial>These should load up in WinXP =
w/o and=20
drivers from Matrox, and that's how I recommend you do it. I'm =
posting=20
this mainly for the Win ME/98 crowd though.... seemed to play much =
better in=20
that OS. This is not the same as the 32Mb version of this model but =
if=20
you've been counting pennies to go Dual Monitor or already have one =
and need=20
a backup, this is probably as good as it's gonna get for those =
situations.=20

PS: I only started =
buying from=20
this vendor recently, but I've had no troubles at all so far and =
they deal=20
with older (ahem.. vintage) computer parts mostly that I can see - =
which is=20
perfect for a Parisite.

I go.

The problem I do have, however, with the perfect pitch program I have, is that I always have a reference (being that last note played). 3/4 times, even octaves apart, I can work out the note playing using relative pitch already. That said I do have some work to do in learning more jazz chords by ear. I'm not familiar enough yet with the sound of things like 9ths, 11ths and 13ths and all the variations thereof. Doing a bit more playing will help a lot though.

I might look into that relative pitch course though, perhaps in a couple of months, depending how I go with perfect pitch.

Thanks for the advice.

Cheers,
Kim.
