Wow, a PDF and just in time for Festivus!

And a big Thank You to the Hidden One.

El Miguel (officially restarting count down for a Paris update SOON)...

Download pdf versions of the Paris manual if you haven't done so, Joe.

Haven't used it for that, but the only problem I could see would be having to take the computer, mic, etc to the piano. Seems like a stand-alone tuner might be better if you do that a lot.

I tried putting the original drive back in but the problem is still there.
Both CD and DVD drives cause the error now.

Everything else works. I think I could run 4 hard drives with no problem.

>Hi, Ed.

Nothing I say will help you right now, but...

I actually stay away from "+" R's for the same reason.

I have had the most luck with Pioneer burners, too, FWIW.

(had Liteon and LG. Neither inspire confidence.)

Also after making a backup, I always copy it back onto my audio drive just to make sure it will read.

Always burn a little slower than max, and so far Imation and TDK blanks have never let me down.

Good Luck,
Kim

>Hi Kim W.

I'm using the 9NDA3+ board with a 3200+ single processor. Tried my Asus A8V Deluxe with dual Core 3800+ with WinXP and Paris. No luck at all. At the beginning, I could start Paris but had problems with crashes at once when trying to do something different than just playback a tune. After a couple of dead tries it crashed at once when trying to startup too.

>The RNC is a great little box for the bucks. If you're talking about tracking

thru compressors, I'd say this: I frequently (but not always) track vocals,
bass, guitars and horns thru compressors, usually dbx 160X for vocs, UREI
LA-4's for guitars and bass (although the 160X is nice for them too) and horns,

then RNC (I have 3 of 'em). I never track drums thru compressors! Nor do I
ever gate drums. I would always rather have the un-compressed drum tracks
first, then compress as needed after. In fact, I frequently don't compress
drums, even in the mix...

Just my .02 worth.
