t over and their contract ran out?It just says their pro audio web site is coming soon. That probably means they are just going to sell their forensic audio tools and other stuff there. Remember, remember, remember, even when they were doing work it was incredibly, incredibly slow and many "soon" promises were made that turned into years and also never materialized. Don't start any excitement over such non-information. If Edmund is behind it, I'm not.Thanks Neil-

Yeah we took the card out and put it under the magnifying glass. The 2 bottom left input holes seem fine, and we can't find the broken tips anywhere. As for the broken male end, I have another back up cable that's fine, and it's not working either.

Philips 23" Widescreen HD Ready LCD TV

\$299.99Took the EDS card out again- and with light behind the plug, I can see
it's clear that one of the holes is blocked (prolly with the broken tip off
the
male input).

Does anyone know if this component is soldered to the Card itself? Hoping
to be able to replace it if I can't extricate the pin tip...

Thanks,

Ted

LOL... no kiddin. Years ago I got a neck full of PAR64's about 5 ft away from my neck at the Cain's ballroom on a drumming show. I'd like to have knife stuck the idiot that thought that was a good placement for the wash lighting.

I can't seem to get away from tubes, but modeling is/has been improving to great levels. Good thing I don't have a gtr gig right now to have to lug that stuff around :)

>

> Tell me more. I thought DMX was pretty entrenched. What do you see
> replacing it?

Spec-wise? Not built yet to my knowledge but the problem is with the
protocol. 512 channels sounds like a lot until you see the amount fixtures
can swallow up and how DMX DIP's are used. Taking 4 channels per fixture on
the low side is pretty common. Running out used to be unthinkable, but it's
very, very thinkable and the control surfaces get limited. It's going to go
the same way my midi packs went and die like any other spec IMO. They have
one workaround that I've seen by linking to 512 desks together to get 1024
but it's not generic. I forgot who made that conversion option in their
console at the moment, but it was high end... definitely not your typical
club band stuff.

> I wouldn't mind having direct MIDI control over lights w/o having to
> translate to DMX.

I have that, direct midi to light packs, switchable to DMX as well... Adore

them, wish they still made them. :(

And I am perplexed as to why I can't get decent levels going out of the 4 subs. The channels are super loud in the main mix, but coming out of the subs to Paris is terrible. I have had mixers with these 4 sub groups out, but never messed with them until now... how disappointing!

When I get time to spend playing around, I am gonna try to see if I can figure out how to increase the levels within Paris for my 8in card inputs to get a better signal(s). If that don't work, I am gonna put a cheap 4-channel preamp between them and see if that works... Right now I have channels 23 and 24 reserved for the Paris playback... I have it cranked almost max to get good levels to hear the playback to record... but still the levels on the channels being track (main mix) are over-powering the playback. I am worried that if I increase the recorded tracks, they will spoil the Paris levels coming back in the mixer for play back even more.

Grrrrr.... I thought this was suppose to be easy.... lol. I feel like I am living in the 70's with 2 cassette recorders to multi-track... .lol.

What brand/model or device is others using for playing live and wanting to track like me? As a front-end?

As far as new Paris goes, I think it is a great time to introduce something different in the DAW world, and I think we should give them a break until we see the goods.

What????.....no fader automation??? No built in bus compressor????

I hear Chandler is coming out with a new console. Probably shouldn't cost more than \$200k....but maybe that's for just 16 channels.

;o)I agree... to a certain extent. There are many new things in the DAW world, but nothing like Paris (unless you have a Sony bank account). Everything these companies are focusing on are small DAWs... plug in a guitar and a mic... screw the rest of the band having their own inputs. It's like they moved back to the 8 track world and they are stuck there! Release some hardware that is like Paris... an awesome PCI card that will interface to an expandable item like the MEC so I can expand and upgrade it... There isn't anything out there that is like Paris that is reasonable...

>If he doesn't want to lug a full-sized electronic drum kit around there are some great portable options for composing/recording drum parts.

If he has a sampler plugin for DP, then he's probably set for sounds. If not, Native Instruments Battery 3 is the most flexible (he could sample his own set), or preset ones like Easy Drummer or BFD.

To trigger the sounds he could drop notes into a musical staff in DP and write/hear drum parts that way, mouse them into DP's piano roll editor, or he could play a synth keyboard or get a percussion trigger pad like those from Akai, Roland or M-Audio's Trigger Finger.

Sounds like there's clear need for an improved standard to support more
complex lighting situations. If you hear of anything in development, let
us know...

welcome any
up date from ID. If it's a completely different product it would have to
be as revolutionary now, as Paris was in 1997 for me to pay attention.

For the sake of the people that are still invested in Paris, please don't be insulting or threatening even if your just joking. This could stop any release.

Based on the "support" ID have given Paris (a product that they are still selling) I would not invest \$0.10 in a new product from them regardless of how earth-shattering it was. I said as much on this group years ago when Edmund was still around, and I still feel the same way. They would have to do a *LOT* to earn my trust again.

David.

This has come up. There have been discussions, and basically in my view it appears to break down like this:

(*) Many people here use NNTP (Newsreaders)

- (*) Some people here use the web interface and like it
- (*) Some people here use the web interface and don't like it.

Firstly, my exploration has found that there doesn't appear to be much out there which supports BOTH NNTP Newsreaders AND a web interface. By and large, any move to a better web interface would mean sacrificing the NNTP side of things, which would upset quite a large percentage of the user base.

Some people here quit

think, while slightly messy, the combination of post order and thread which this web interface provides gives me a respectable balance between "keeping up to date with recent posts" while still being able to track the thread in terms of who has responded to who. And personally, I've never been a big fan of graphical smilies and the like, so I'm kinda happy with the web interface.

The people who use but don't like the web interface would then, most likely, be split into different camps of which interface they would prefer. I could change interfaces to try and please this group, but it would probably be a struggle to make a move which was to everybody's liking, especially when you take the NNTP into account, in addition to the people in the previous group, who actually like the current interface.

All in all, considering the effort and cost that would be involved in the change, and considering I don't actually see any options which I think fit the idea of "overall positive consensus" in the group, I've chosen to stick with what we have. It also has a certain nostalgia to it, as well as actually being rock solid software (and I'm not kidding - I don't think I've ever seen a piece of software more bugfree than the software running this forum).

So while I'm always open to suggestions, making a c

-----=_NextPart_000_005F_01C800A6.99CD7850--Speculating here, but I seems to remember
ID had a native
Paris-program and some other things in the pocket years ago, as far as
I could understand Edmund and SCC's was writing here between the
lines in those days. I think Edmund too must have had good times to
speculate more with these things;-)

. (blush) . . . what does "native" mean in this world of DAWs?

Don't hit me . . .

Sis that where "fat" ladies sing?

<http://www.sonicstate.com/news/shownews.cfm?newsid=5360A> native version would be the next
logical step but it would be so archaic
compared to Reaper, Cubase and others it would hardly be worth the trouble.

I seem to recall one time on one of the Sunday night chats when Edmund showed up - everyone said hi & he started off his conversation something like this: "Guess what I'm doing?" everyone goes "what?", he says: "I'm sitting here running Paris on my laptop", everyone says "what?" "huh?" "whazzat you say?" Someone pipes up: "You mean like a NATIVE version of Paris???" And Ed was very coy - he wouldn't say if it was or it wasn't.

So... who knows?

<begin wishful thinking>
If it sounded like Paris, but worked like SX, I would consider

Yes, but what if the editing shows up as good or better? Hee hee hee ;
) It's all speculation. What if Edmund has been working on Logic for Apple

all this time??? Some of those feature concepts look familiar! We could speculate all day;)

It's always fun to dream. What would be on your wish list?
