ADK Pro Audio  
(859) 635-5762  
www.adkproaudio.com  
christ@adkproaudio.com HI Thad,  
Well a dual quad-core will be q pretty big upgrade.

Haven't tried the Liquid Mix in a xeon system. The boards we use have TI so in theory they should work with the LM.

The boards we have had the best luck with are the Super micro 5100 and 5400 chip set based boards and the Intel D5400XS.  
The lintel board ain't cheap works really well.  
The 5400 chip set stuff you have to be careful with because of the heat issues with FBDimm ram. The Intel boards lay out helps allot with this because it does not follow the stupid Xeon spec of having the CPUs right next to each other.  
It uses a socket 775 setup so you can use the better desktop style heat sinks.

Super micro has a really neat 5100 chip set set board that is Micro ATX!! Works really well.

used very, very badly.

I've been thinking that it must be some sort of vocoder. Does anyone know what I'm talking about. I don't want to actually DO it! I just want to know how it's done!

Thanks,

GanttKerry - Sweet man thanks for the contact. I look forward to learning more and causing myself problems as I reach higher than the system will allow :-)  
Tonight my second Paris system shows up and I try to put the two EDS cards in and change the skin. Double the pleasure double the fun right? Some days I just feel over my head :-)

Thanks again

Stronger sounds like a vocoder controlled by a midi keyboard  
to me. That's just a guess. Probably other grit thrown in there to.  
I like that sound alot. It is what sets that song apart from the  
competition. Aggressive in a rock n roll way. Maybe some

amp sim or the real thing with it.

The Magma PCIe host card runs works fine with the Magma PCI chassis. I'm  
running one on my DAW here.Hi Ron,

I've never messed with the skins although the greenish one  
Gene had going looked really nice to me. I like Paris' original too.

3.0 is awesome. Avoid Pace if you can. If you can find it, it's worth it.  
XP also brings alot of newer plugins to the Paris table too with FxPansion  
3.3.  
XP eliminates ADAT sync for most but some have it working here  
oddly enough. Grouping is a huge benefit, four plugins on each aux bus  
and the list goes on. Vertex Faderworks is a must have in my opinion too.  
It allows latency compensation with a single key stroke. Macro  
Express is another must have for handling screens quickly. Mike Audet  
has ported some absolutely incredible reverbs over to Paris too from the  
DP4 and DP Pro.

There's my positive synopsis of the last five years of paris' demise.

>Hi,

OK so I searched and found that there is a DVD out there that could help a Dude like my find some help with Pasris. I have paste a reponse giving permission to share. Does anyone have a copy to share with a guy who is a visual learner. The book stuff just doesn't come easy :-)

This is from Allen I think:

"I appreciate the concern for my efforts and art. Truly, I do. Gives me the fuzzies :)

However, any way you cut it Chuck left the reins in my hands and I'm not making/selling them... so, basically I was just saying although I don't have any to sell I really don't care either way to be honest. Hook the dude up, anyone.  
That's the official word.

That DVD was a lot of work, but it was a love labor on my part and frankly all I cared about was to cover my expenses, help fund the Skunkworks effort and the side bonus was the ultra cool hang time with BT. Brian wouldn't take a dime, and his gift was his time/knowledge in case anyone didn't know. He is truly a great dude. After all this time I just couldn't see charging for a dead platform how to video that was years old to boot. I don't see a new one being made at this point, so there is nothing to update. Maybe someday "soon" will come, but I'm not holding my breath.

Copy on with my blessings, Paris users. I saw this day coming, that's why I didn't protect it.

AA"It's a PITA, and an unnecessary one. There is a tool called AntiPace out there on the net that can remove that thorn since ID is too self absorbed to give a crap about the former customer's rights. Doesn't work on a Mac, btw. Gotta be PC.

They did Low Spark. Great energy in that one.

Cheers,

-Jamie

He sang effortlessly for most of the show. He seemed to get into a little trouble mid-set on one song. It was a hot, dry, windy and dusty outdoor show so I'm giving him a pass for that moment. He was fine after that.

Cheers,

Hey Don,

Still tweaking the amps a bit, but the install went great. The coverage is REALLY good...

Here is a small shot of the speaker cluster from the top of one of the suspension towers, and a shot of one of the 5 "sticks" inside...

Nice to hear you are keeping busy...

David.
