ruight before Christmas I was sitting up in my office and my little 100 lb. wife came in holding her hand, which was turning blueblack. About 15 minutes earlier she was opening her card door in the parking lot of the local Krogers when some guy slipped up behind her, grabbed her arm and started trying to yank her away from the car door. She whipped around and planted her right fist right in the middle of the guy's face and he went down like a sack of potatoes. He was so shocked when, rather than running away, she started advancing on him with her fists clenched screaming in rage that he scrambled to his

feet and hauled ass across the parking lot and disappeared behind a liquor store. The manager of that supermarket is a good friend of ours. Police were summoned, a dragnet was instigated by store security, etc. I took Amy down to the minor emergency clinic where they X-Raye

d her hand and she gave a statement to the police. During the interview we were told that the sanctuary city policy has drawn some pretty ugly folks to this area and that there have been numerous attempted rapes and robberies in supermarket parking lots all over this town recently by young hispanic males who, when arrested, have turned out to be illegal immigrants. The guy who grabbed Amy was a young hispanic male. Little did this guy know that Amy is one of the best sketch artists in Colorado. She had a drawing of the guy for police the next day. They are still looking for him. Hey Doug! Happy New Year back atcha!

Cheers,
-Jamie

Please tell her I said that. That could have turned out much worse.

Ok, so I am in a well-known bar on the coast here near San Diego. Hot local cover band is playing and I went to see them (I did their system). There is a beautiful girl (the best in the building frankly) who sees the band fairly often, who has become a good friend. Now,

I am very married, and there is no funny biz going on, but since we

ly sync up via USB2. And when I
> bought it, I only had USB1 ports and refused to buy a separate card.
>
> pabl was disappointed when they dumped the FW on the iPods. Most of the Macs
I own have USB 1.1 which is really slow, and doesn't work as well as FW.
They left out all the people that have external FW drives with this lap
top. Their answer is for us to spend another \$300 to \$500, and un-securely
back up over the air. Some times they are just too whiz-bang, consumer oriented,
they need to think prosumer.

I wish Apple would stop building obsolescence in to their products. They
have put iSight cameras on the iMac and all the lap tops, why wouldn't they
put one on the iPhone and the iPods? Why not add a mic to the iPod so you
could do dictation or record lectures. I hate having to buy add on doodads.
The whole idea, is suppose to be portability. I don't want to carry more
stuff.

loyal and hip," you're wrong. That doesn't apply to most of the

>Now why did you think I was criticizing Apple with hyperbole? Could it be
that Apple skin is just a little thin? And... I don't recall a desktop
release with more than

3 models... so, "every" means "every". That's not called hyperbole, it's called history. ;-))

By "blinding speed" I seriously meant a dual quad in general - any dual quad. You are missing the whole market of families that on average probably have about \$1k to spend on a computer to serve everyone, and when faced with a full desktop with monitor included, or a cube with limited expansion and I/O capabilities, and monitor additional, where do you think they will go? Just sayin' that the PC aisle at CompUSA and BestBuy are always busier than the Apple sections, and the number of PC options dwarfs the Mac shelves significantly. This isn't our market, so it's easy to overlook it.

Nothing wrong with Macs, but you have to admit that the general culture and approach of Apple is "build loyalty by limiting choices both on the way in and when it comes time to upgrade".

DT
