less of an issue with OSX. Made a huge difference with OS9 to
the extent that Avid required it and it was a really good idea
with Paris.

>Apple has always geared their OS to consumers, including pro audio guys;

Not consumers.

not at all...

DCIn the car biz, if you are going to make a car and put it on the market, you have to provide parts for 10 years. It's a legal requirement.

Now, I am a free enterprise guy, but it sounds like a good idea to me...

DC

the whole disk and all the files in several places. OK, let's go for it.

11:00am -- Partition Trauma -- you know what? It's really hard to erase a perfectly healthy computer even if you think you're going to make it better. What a painful thing to have to do. But, after a short prayer to the computer gods, I erased and GUID partitioned the drive. The process was very fast -- sort of like ripping a band-aid off a cut. It only hurt for a second.

11:15am -- The Leopard Install Redux -- just as promised, about 40 minutes later, OS X 10.5 Leopard was installed on my computer. Visually, it is slightly different from OS X 10.4 Tiger. My first impression was that the newly translucent top menu bar was going to bother me forever. It probably will.

01:00pm -- The Fun Begins -- It took an hour to copy the .dmg file to my empty Leopard computer. I mounted the disk image and then shift-double-clicked it. The image dramatically increased in size then faded away. In its place was an open directory that looked exactly like my old Macintosh HD directory. Perfect. A quick reboot and I'll be done.

Check out the Shelly Palmer Report archive.

01:04pm -- WTF? You know you would not be reading this article if this trick worked. It didn't. You also know that the definition of insanity is doing

the same thing over and over again and expecting a different result. I tried the shift-double-click trick about four more times while I dialed Apple tech support to try to get into the queue.

02:14pm -- Apple Tech Support, an Oxymoron -- If my first tech support person had a thick foreign accent, I don't even know how to describe the language this gentleman spoke. After I described my problem to him he said, "I am not qualified to help you, you must talk to Level 2 tech support. Can I put you in their queue? The wait time will be about 15 minutes." The line magically disconnected after 30 minutes forcing me to call back and go through the process again.

The songs they play on hold at Apple Tech support are not for everybody. I'm being overly polite.

04:32pm -- Level 2 Tech Support -- I have a new best friend at Apple, her name is Dawn. English is absolutely her first language and she could not have been nicer on the phone. There was only one problem. She had no idea why Leopard would not permanently mount this disk image. In fact, she told me a story about her Friday evening Leopard experience. Truthfully, I'm
