>Hi Aaron,
```

I think you are on to something with the effects update installing into the wrong directory. The weirdest part of this is that it is an unhandled exception, not an error 1/1, which suggests that it is not an IRQ issue.

The only time I've seen that is with a bad effect.

It could be a direct X issue, too, even if there are no audio dx plugins installed because video apps and drivers install dx stuff, too.

Anyway, I hope this gets solved soon.

I heard that the largest growing segment of the music market was vinyl in
the first quarter of this year. Who knows.makes you sound like a flooring installer.

>I have recently been experiencing some dropouts on tracks with UAD plugs during mixing. This hasn't happened before. There are no edits in the tracks in question, and the dropouts, when they occur, tend to happen at the same place, and on the same track, time after time, assuming I start playback in the same place. This sounds like some sort of buffer mishap or something. Something else is, I've noticed that if I look at the UAD meter, under config, the sample rate reads 48k. I'm mixing at 44.1 with both the Paris AND my Lucid word clock set at 44.1. If I reboot, this will usually change back to 44.1 I'm running 3 UAD cards and 6 eds cards, all in a magma chassis. UAD version 4.9. Anybody had anything like this happen, or any thought about something that I may be missing?

addendum

I just tried it again and rendered the bass track (the one with dropouts) all the way to the beginning of the piece, so there are no spaces before the track starts and there are no dropouts, at least for now. The dropout happened at about 19 seconds, consistently, before I did this.

errrrrr!Corrupted audio file? I recall PARIS is a bit twitchy about that sort of thing.

usually don't render my files before bouncing down. I haven't had a problem like this, even with extensive editing, segmenting, etc. Is rendering something that "should be" done before mixdown? Using PARIS 3. Thanks,
Edna

>There is a freeware vst oversampler 1.4 which oversamples twice the frequency

you work with improving aliasing !

So mostly equalisers would benefit from inside Paris used as vst plugins.

It works with Paris !

I don't know if it sounds better cause I did not test it yet !

I hope that others will test this !

Cheers,

DimitriosOK, glad to know I'm alone. It's just weird that I've been going this long

and never seen this till now. Rendering without native plugs did the trick

this time. I hope it's always as easy as that.

>Well, it has happened to me whne I didn;t notice till later, like a bass note dropping out that did not occur the 76 times I heard the song while mixing..So, on final bounce, I hit D and go out of the room so as not to want to tweak anymore, burn the file to CD for the band and find out it had that drop out later..which is annoying.

Honestly, I think it has something to do with the beginning of the file not going all the way to the front of the project.

Drag'n'drop as you need. Yes, only 2 MEC in modules and 2 MEC out add on
modules at a a time. think about it though, you have only 16 channels per
submix, right?

You can use additional inputs (8 to be exact) to feed auxes/External loops
on channels though you cannot of course record those. That gives you the
total of 24 streams of I/O PER CARD. No more. If you need more you need
another MEC and another EDS card to host that MEC.

an to post anything
after a nutcrusher 14 hour day gig shift (fiber installs using wire
strippers, sheesh.....)
No edits, at all? That is odd dude. Even more odd that a render fixed it.
Kerry's probably right about it being a slight corruption in the audio file.
My guess is windows 'fixed' it on bounce

I was under the impression that all radio stations paid royalties (or a fee)
to PROs...you mean I've been wrong all this time?

Well in that case yes, and let's make it retroactive

:~)

DVery cool

>Hey guys, I need some major help here. Recently one of my audio drives crashed.
I had not experienced any difficulties with this drive. I was importing new
files to an existing project. All went well with this. Once I started to
play the project, I received a "system overload" error...never saw that before,
but the project had a huge amount of files, so I figured I'd just restart
Paris and remove the unneeded files.

Upon restarting Paris, the system froze and I rebooted. Upon rebooting, I
received a notification that my audio drive had to be defragged. I did notice
that there was a limited amount of space on the drive, which I felt might
be a contributing factor. Once I started the defrag process, the performance

could not continue and the system froze. Upon a reboot, I was now told that
the audio drive had errors. Even though I back-up religiously, there is always
new data that may get missed. after several reboots. I was able to get into
the drive and copy the few files that had not been backed up.

A bigger problem arose today. When I booted up, I forgot that the failed
audio drive was still inline. Despite opening yesterday, I heard several
clicks and then received the Blue Screen" message, (paraphrasing here) "A
childlike device was connected to your PCI..." I have seen that message some
years ago and it is typically very bad news. Now it seems My "system" drive
no longer boots...full crash, though the problem I had was initially with
the audio drive failing. At startup, I'm receiving "Insert Boot Disc" messages.
I'm hoping that I do not have to reformat the "system" drive.

Any and all assistance greatly appreciated!

Oh Specs:

ASUS motherboard running Windows 98SE
1 gig RAM

Tyronel have a Roland half rack reverb, forget the model number. something-50?
It's suffice

to assist the needy :), and it seems my OS drive was a bit confused after
I removed the audio drive from the configuration. I removed the jumper designating
"master/slave" and was able to boot the OS drive again.

New problem though. I opened Nero to do some critical back-ups and it says
my Win-ASPI file is now missing. I am a bit confused by this...it removed
CD drive icon as well. Any thoughts?

Hope this will help. If not, try to reinstall or update Nero. I believe Nero install it's own driver.

Erling
