 this procedure pretty well.
 It's =
 on page 4=20
 and 5 of the 3.0 version.
 It kind of sounds =
 to me=20
 like you may not be hooking up the =
 correct
=3D
 eds
 =20
 =3D3D
 card
 to the master=20
 mec.

 news:46972376@linux...
 =20
 This is really a novice oriented question but . =
 ..=20
 .
 It doesn't matter which card is =
 the "A"=20
 card
 in your system as far as =
 Paris' ID=20
 orientation right?

 =
 =20
 Yes, it does, and the orientation of the slots you are =
 using=20
 in
=3D
 =3D3D3D
 combination with =
 the=20
 orientation of the ribbon cables will =
 =3D
 determine
 =20
 =3D3D
 =3D3D3D
 this. =
 Have you=20
 changed them around during your reconfiguration?
 =

 Start with a new SCSI cable =
 and a=20
 single EDS card. Test each =3D
 MEC. =3D3D
 =20
 Once
 =3D3D3D
 =
 you know=20
 if there is a problem there, add a new SCSI cable and =
 =3D3D
 =20
 another =3D3D3D
 card. Put different =
 modules in=20
 the MECs so you can see which one =3D
 is =3D3D
 =
 on=20
 =3D3D3D
 card A, B, C at all times. this =

will give=20
you the info as to how =3D
>the
> =
=3D3D
> =20

(actually, there is a Win driver called ASIO4all that is supposed to accomplish this. Last I heard, it sucked big time.

;o)

Mixed manufacturers? What kind of latency are you getting with sample library VSTi's and mixed firewire/PCIe?

My Fireface 800 doesn't have the low latency of the PCI HDSP system, so I'm curious if when mixing the two, latency is subject to the limitation of the firewire interface, or if the Mac/Core audio manages it better than XP might.

With XP/PC you can add interfaces from one manufacturer, but I doubt Firewire and PCIe would be elegant - the only time I tried it the Firewire interface was only connected for access to its' control panel - only the PCI interface handled direct I/O.

I also agree with James on the Konnekt - 32x32 would be much more attractive if used as an interface and not just a converter/patchbay, but I fear that's a firewire limitation.
