>
>So with that potential and none of the low latency systems truly giving
what I call professional latency, I would think there is a market for
some bold company to do it with a soft/hard solution, but I know there
is a big risk and it's probably a lot of work putting it all together.

Thank You

JohnJohn, I think if you just save your default project as a 44.1, Paris should come up at 44.1 when you start it up. The Default resides in the EMU folder if I remember correctly.

>
> Thanks in advance for any tips.
> Dan
>It's still going to sound like a split coil humbucker on a carved top solid
maple/mahogany body with a shorter scale set neck, which is closer to a strat
but it's still not a strat. I like technology as much as the next guy but
either you use it like Leo made it or you don't get the sound. You can get
closer, but if you put a big fat 'bucker on the neck pickup of your Tele
will it sound like a Les Paul?

It might be good enough for government work but there's a lot more to making
a strat sound like a strat than the pickup wiring.

TCB

I see no problem with that. Now, those super duper CPUs can take on the task of providing mega watt power to all those cool native plugins..

It's funny, but Paris (Ensoniq/ID) had this vision way back in 1997!! Yikes..
Best of all worlds.
