he edges and certain things cause instant crashes. For example, trying to open its driver control panel, probably because that hasn't been written yet.

drivers from mike. every one of them do completely different shit but only 1 will actually boot paris and it encounters a problem at shutdown and wont save anything. this Fn sucks. I give up. trying to run paris is ruining my business.Hi
I'm in the process of purchasing all the components to put together my new system.
I got a MEC on ebay
a EDS1000 card and controller card.
also some in and out cards for the MEC.

Now i have a new DELL precision 9600 and i heard theEDS1000 card won't fit in these as it needs a 5V slot.
2 questions..

1. Ack.. does this mean i need a Magma system and still use my dell .. magma are quite expensive! Can i use an old G4 or G5 mac system? that would be cheaper that magma chassis.

2. And where can I purchase the software for windows?

Help appreciated..

forums are great! You can use an old Mac G4 running OS 9.2.2, but that's the latest iteration of Mac that will work for Paris.

The Paris Software is platform neutral, runs on Mac (OS9) or Win ME, XP and shortly (now for some) on 7.

You can check the classifieds here for 3.0 softwar

o everyone and thank you all for keeping this site and paris alive. Also want to thank Mike for the great effort.I bought a new sandy bridge pc and want to get rid of most old 32 bit stuff.The only driver i'm missing is for paris to run complete system 64 bits.I'm checking this forum every day anxiously waiting for Mike to do a miracle..best luck!!Hi thanks. There are 2 MEC expansion slots available.Wow Jim, this is totally cool, what a great idea.

Great job.

=773&private=0" />can you fit an two 8 in & a 8 out into that?? for 24 bit

looks very clean This is my first post here.Hell

mmyJust bought Mike's reverbs, trying to get them installed. There's something missing from the text, it seems. I think the red x's should be the blue text, copied and pasted, right?

Here's the install instructions:

Installing plugins on windows 98/ME:

Copy the dll and ini files to C:\WINDOWS\SYSTEM\Ensoniq\PlugIns

Installing plugins on Windows XP:

- 1) Copy the dll and ini files to C:\WINDOWS\system32\Ensoniq\PlugIns
- 2) Add the path to the plugins to the system path.

Right click on "My Computer" and select "Properties"
Go to the advanced tab, and click on "Environment Variables"

Find the variable called "Path" in the "System Variables" box and double click on it.
Type a semicolon at the end of the list in the box that appears, and then paste in the path to the plugins folder, like so: XXXXXXXXXXXXXXXX
Click OK, and another OK, and start up PARIS!Jim,
So how much will you charge to MECGyver one of my MEC's?Oh, now that is just ridiculously cool!

Just imagine sticking two 8i cards in there - voila, a 5 rackspace, 20 channel PARIS mobile recorder...Hi Rob, Thanks

Will, just parts I had and a Dremel and some time if you want to undertake it you can call me and I can give you some guidance. Just give a call 541 621 9277.

Kerry, thanks for the phone encouragement. Hopefully eventually I will be able to get an 8i card and an ADAT card. I won't know if there's a noise problem until then. Hey Jim, I see that you may be in need of an ADAT and a 8i card, I am in the later stages of a full switch to R

RobWelcome aboard. This ain't quite the rockin' place it used to be in the Glory Days of Paris, but there are a surprising number of active users still making great mixes with the old system, and lots of modernizing going on too. thanks for the welcome Ted.i've been working on paris since it was born in 1997 i think.nowadays i still use the converters together with creamware scope and cubase..love the sound of it..

asio drivers is another thing that'd be great but since it's presumed dead for a long time now, it's really amazing that Mike who must be a hard core passionist is still losing nights over it.His work is sure worth a lot more for the stuff he developed.

belive me,many big corporations should learn from him and such enthusiasts how to respect their customers..I second that! Wholeheartedly!!

Would the motorized fader box include transport controls and such? How would it behave across multiple submixes?

Ji

! Thanks for the moral support anyway!
I knew if I closed my eyes and clicked my heels you'd get it sorted.

Umm, that's sounds dumb....But accurate

lock of your RME card to Paris and slave to Paris' clock ?
I have just got a digi9652 (limited to running on 32bit sadly)
as my Pulsar cards just weren't playing ball, so it's new territory for me.
I did also ask Mike Audet if it might be possible at some point to stream audio in/out of Paris via
his new drivers in some way - perhaps using something like Jack Audio which already routes Asio
between other asio applications and hardware...
However that's probably a lot of work...and for now I'll be focussing on enjoying the super new
drivers. Dear Mike !
I am still using XP 32bit but the ASIO is much needed to work Paris hardware with Cubase 5...
Any update regarding the current status of your work if any progress ??
Thanks a lot for all that you do for Paris !!
Regards,
DimitriosAnyone using PARIS with laptop ?
YES that is what I wanna do next !
So except for expensive Magma anyone succeeded working Paris with a laptop ?

to disk? If so I would learn to compensate in the mix. Does one typically need to learn to

compensate in the mix for the effects that mixing down tends to have on the sound? I would think that the less eq needed in mastering the better?

Thanks for any thoughts.

Here is a link to the latest project and perhaps the last for a while as I am taking a sabbatical from the studio for a while to de-clutter life a bit. Hope everyone is doing well around here and hope you enjoy this project as it is one that really
