In addition I am most emphatically not MS certified, so piss off. Nor am I an apologist for MSFT. I have been a consistent and relentless critic of the way they do business, on this forum and many others. However, in your world full of tinfoil hat wearing conspiracies either one is an evil Apple hater or a glorious Apple lover. The fact that I find the way both of them do business loathsome is obviously too much for you to get your arms around.

So why aren't you all bent out of shape that the iPod was "ripped off" from Compaq and HanGo (which beat the iPod by 2 years)? Being the device that breathed new life into the company, isn't that a pretty major "crime"? Feel free to rationalize how that is different than MS "stealing" their OS.And to think all I wanted to do was to take a nice shit on Vista. Look at the trouble I've caused. I'm sorry.

Steve Jobs

And they showed me really three things. But I was so blinded by the =
first one I didn't even really see the other two. One of the things they =
showed me was object orienting programming they showed me that but I =
didn't even see that. The other one they showed me was a networked =
computer system...they had over a hundred Alto computers all networked =
using email etc., etc., I didn't even see that. I was so blinded by the =
first thing they showed me which was the graphical user interface. I =
thought it was the best thing I'd ever seen in my life. Now remember it =
was very flawed, what we saw was incomplete, they'd done a bunch of =
things wrong. But we didn't know that at the time but still though they =
had the germ of the idea was there and they'd done it very well and =
within you know ten minutes it was obvious to me that all computers =
would work like this some day. It was a turning-point. Jobs decided that =
this was the way forward for Apple.

Many companies made Mp3 players. I don't absolutely know what took place, I would assume that Apple licensed what ever technology they needed from Compaq or whoever. In all fairness, I'll mention that Creative Labs filed an infringement suit against Apple for some of the technology in the iPod. Creative's patent was granted on Aug. 9th 2005 and immediately filed against Apple. It surprised me when Apple settled out of court for 100 million dollars and did a licensing deal with creative so Creative could manufacture iPod accessory products. Is this something Apple did intentionally, I don't know, but it sure didn't look good.

I know the iPod was designed and developed in house. Here is some info on the the iPod, I don't know how accurate it is.

Martin, apology accepted, and I want to thank you for your honesty about what you use and your preferences. I find it very interesting that you are able to run Mac OSX on PC hardware. I don't know who else would be interested, but it would be great if you would post your setup again and what you had to do to get it running.

Some times the old NG gets a little boring, a little heated debate isn't all bad. I'm with Kim, this dead horse belongs on the general NG. And yes, I'm ready to give it a rest, if everybody

people. They play
a friendly game of golf
and then dine on lobster, caviar and champagne.

Also present is the devil, who really is a very
friendly guy who has a
good time dancing and telling jokes. They are having
such a good time
that before he realizes it, it is time to go.

Everyone gives him a hearty farewell and waves while

the elevator
rises...

The elevator goes up, up, up and the door reopens on
heaven where St.
Peter is waiting for him.

"Now it's time to visit heaven."

So, 24 hours pass with the senator joining a group of
contented souls
moving from cloud to cloud, playing the harp and
singing. They have a
good time and, before he realizes it, the 24 hours
have gone by and St.
Peter returns.

"Well then, you've spent a day in hell and another in
heaven. Now choose your eternity."

The senator reflects for a minute, then he answers:
"Well, I would
never have said it before, I mean heaven has been
delightful, but I think
I would be better off in hell."

So St. Peter escorts him to the elevator and he goes
down, down, down to hell.

Now the doors of the elevator open and he's in the
middle of a barren land covered with waste and garbage.

He sees all his friends, dressed in rags, picking up
the trash and putting it in black bags as more trash falls from
above.

The devil comes over to him and puts his arm around
his shoulder. "I don't understand," stammers the senator. "Yesterday
I was here and there was a golf course and clubhouse, and we ate
lobster and caviar, drank champagne, and danced and had a great time. Now
there's just a wasteland full of garbage and my friends look miserable.
What happened?"

The devil looks at him, smiles and says, "Yesterday we
were campaigning..... Today you voted." "Sorry, wasn't trying to be rude - just making a joke. I
haven't
used Waves plugs since their first Native Bundle, so i can't
help you.

Neil

Yeah, Microsoft never screws anybody.

Apple was ailing because of a bad deal. Apple got a new CEO and had to take a new direction to survive. MS wasn't ailing when they told system builders that if they put Netscape Navigator on systems instead of IE they would pull all MS products from them. MS never threatens or screws anybody, yeah right!

No double standards here, I think it's different, Apple did what they had to do to survive. They didn't "pull" the licensing, They just didn't renew the licensing when they had a major upgrade to the OS. The cloners could have stayed in the game, but they would have to pay a higher price for the OS, boohoo. The cloners weren't going to be able to make a killing on the sale of clones at Apple's expense anymore. The cloners did not grow the market for the Mac platform, some of the responsibility also falls on them, they had their chance.

MS giving IE for free in order to put Netscape out of business. How about when MS created a proprietary Microsoft version of JAVA that was incompatible with SUN standards. MS wrote tons of ambiguous lines of code in to their versions of Office for Mac so it would run slow. MS, always trying to control and damage others. What about MS taking the look and features from Mac OSX down to aqua icons for Vista? Shouldn't they have to pay for that? It is a blatant rip off. MS has to copy and rip others off, they have no original ideas of their own.

Do you guys like what MS did to Vista? Do you guys like the way Vista Works? Do you AV guys feel like MS Vista is too controlling? Do you like that MS is kind of insistent that OEM system builders install Vista? In some cases, if you buy a OEM machine, you have to pay for vista, is that Ok? Go in to best buy and tell them you want a machine with Windows XP on it, they'll tell you you can buy a copy of XP. Do you like all the Vista support? How's Vista working out for pro audio? Back to the Future with Windows XP! It's got more holes in it than Swiss cheese, but hey, that's all you PC guys got!

How's Mac OSX for audio? Mac OSX Rocks!!!!

Keep sucking on Vista!"James McCloskey" <excelsm@hotmail.com> wrote:

Deej since you mentioned PowerComputing, there are a few things that should be noted. As I've said, the cloners ate into Apple's sales. The clones advertised mainly in Mac publications to Mac users, if they had advertised in PC publications and did other forms of advertising to non Mac users they would have grown the market. They didn't, they cherry picked Apple sales.

One such famous incident was when PowerComputing was directly competing with Apple by selling 3000 clones to Apple's long time customer Lockheed Martin, that didn't go over too well. PowerComputing also worked a deal with IBM to get the fastest PowerPC processors before Apple could, this further cost Apple sales.

Steve Jobs went to all the cloners and tried to renegotiate the licensing prices, the cloners wouldn't hear of it, so Apple did not renew the licensing with Mac OS 8. Apple did not pull the licensing. The cloners could still build systems and ship them with Mac OS 7.6 installed, and bundle OS 8, they chose not to. PowerComputing announced after that, that they were going to start building PCs, which I think they did for a short time. In the end, Apple bought out PowerComputing for 100 million dollars in Apple stock. I think that was pretty generous of Apple. I believe it was up to Kahng to take care of his workers from there.

As far as UMAX, they continued on for years building scanners and other products as they did before they made clones. I don't get it...must be the vicodin. ;o)

>Is the metal tang that you screw it down with preventing it from going down
>more ?Hi John,

It does come close to that. Actually 128 is the sweet spot it seemed on the 8 core Xeon I've been testing. But I think that is mostly to do with the Software application being used.

Been rebuilding a customers system that they had built by some non DAW white box type company.

He is using a 5400 chipset board with 2x 5450 CPUs 8 gigs of ram Quadro nvs440 4 head video card, RME Madi card, Sonar 7 64, NI Komplete 5, and Vienna Cube with the 64 plug in for it.

NI stuff is using approx 2.5 gigs and Vienna is using 5 gigs. Sonar is the only thing that is a pain in the setup. Thats mainly from numerous bugs in 7, it's over usability or lack there of. When ever I get mad at something Steinberg does all I have to do is launch Sonar and get reminded of why I use Cubase.:)

(859) 635-5762HI Neil,

Yes good point.

If its on slots 1-3 it could be resting on the chipset heat sink fan and on slot 5 it could be resting on the yellow USB port connectors.

Don't forget, I use Windows XP also. Hmmm, I wonder why MS didn't name it Windows 2001? Maybe it had something to do with Mac OS"X" XPC would have been too obvious, maybe XP for short, how original.

Dude, my point is Apple and Microsoft are not the same when it comes to business practices and ethics. Apples not perfect, but they are no where near close to MS on being evil and unscrupulous. Not the same!Aaron, Gil Amelio made that deal. Apple's board canned Amelio and brought Jobs back to turn the company around, the share holders wanted it. Jobs tried to work with the cloners, it was going to be necessary to raise the licensing cost. The cloners had a sweet deal and were not willing to pay anymore. OS 8 was a major revision to the OS and was long over due by 1997. Apple did not break any agreements with the cloners, they were licensed for all

OS 7 revisions. As I stated, the cloners could have kept creating and building Mac clones, they chose not to. OS 8 and 9 ran fine on the clones. They could have actually continued to build machines up to today for Mac OSX with the open boot ROM. instead, they all got mad and took their ball home.

The ending of the cloning sucked, but it was necessary to Apples survival, and in hind sight it was the right decision. Apple has been prosperous ever since. I was a dealer for all the cloners, it was no fun at the time for me personally. If you don't know the details it looks like it was a raw deal, but there is more to it than that. If the cloners would have advertised more and gained market share, and if they would have negotiated the royalty rate, Apple might not have moved on.

Apple bought out PowerComputing well after the cloning ended, it wasn't a "join us or be killed" thing. Like I said, PowerComputing started in to building PCs after they stopped building Mac clones.

No, I'm saying that those two particular corp's have shown that money 'n'
power is around the top of their list and they'll absolutely abuse it for
more money 'n' power. Greed, money and power aren't necessarily hand in
hand, but admittedly more often they are than not. Private sector, gov't or
3rd world regimes..... it's human trait that those who want to rise to power
get soaked in it and want more. I don't want that kind of power, therefore I
do not seek it. Those who do, will.

No it's a lie. That's not ethical. There's no 'hype' or grey area here, it's a flat out lie perpetuated by Apple.
I have everything from a 1.2 up to my newest acquisition Quad Core here (unless you count my laptops too, then it starts with a PIII/1.0). I have roughly 10 computers here. They all still work, and do what I built them to do and well. . I'm typing this post on an old athlon2800 that still kicks ass every single day for me. It's been on every single day for 4 years. Zero failures. Home rolled from parts and leftovers and upgrades. It renders video, it has multitrack software and a boatload of office apps to boot. Did I mention, zero failures? (now I'm tempting the computer Gods to kill it, aren't I ahahah?)

>
> The G4 laptop runs a lot of apps just fine, I use it for article writing,
> research, and 2D animation work.

Shoot Jamie, I've got an old Athlon 1.2 and a 1.4 that'll do all that (and more..) and I think both are older than your G4. And, I can still get parts for them (as if I wanted to, but that's not my point)..... will Apple still sell you G4/Motorola parts if something dies, without raking your over the coals if at all (Also or course, as if you wanted to put more money in that rather than shiny'n'new) ?

>Not so much for music and video because I have the G5, although my wife

I'm curious, platform agnostically speaking... why a laptop? Those are notoriously more expensive, less empowered and have yesterday's technologies in them not to mention the bus length / speed being slower.

>

No G5 here, and no interest in one to be honest. I got plenty of the G3's and G4's and I didn't like it :) There's an old saying, Fool me once shame on you, fool me twice shame on me.

I can't talk much details about it, but suffice to say when time to spec some video edit systems for a certain employer I told them 8 Mac towers with at least Quad's in them. And 8 licenses of XP w/Bootcamp to go with 'em :)

>

> Granted, about a month after my G5 came out there were faster Intel/Athlon
> chips. But it didn't make my G5 quit pulling its weight around here. :^)

Nah, new is always just a day away and I've learned that the next upgrade just isn't necessary. I kinda like the whole stability thing and cutting edge doesn't pay a lot of attention to that 'minor' detail. I finally bought myself a quad core a few days ago though and hopefully all the parts will be here next week. It oughta schweet. I'm pretty sure of this - the equivalent of what I bought would be at least 3x the price if it'd been an Apple product. Q6600, 250 GB sata, 400 GB sata, 2 GB ram, DVD+-Dual Layer drive, TI chipset IEEE1394, 6 USB, legacy P/S2 should I need it, built in dual head graphics.... rig ran me about \$700. Now THAT is value dude.

Dude... office 2004 is more than a little behind don'cha think? That'd be a 4 year old product. Most computers don't live that long.

>

>
>> There are 60 known virii in the wild for Mac, but you won't hear about

>
> Haven't seen any here.

Which is what makes it so dangerous. Mac folks think they're insulated completely and they are NOT. Do you have phishing/pharming protection? That's another huge Mac misconception. For Jobs & company to mislead their users into that situation just to try to make Windows look bad is NOT ethical.

>
>

10.3, correct me if I'm wrong, is another paid upgrade. For a machine I won't use over stability problems - no thanks.

XP service pack 1, 2 and the coming 3 are ALL FREE. And make no mistake, those are just as much an overhaul as the paid for upgrade Apple wants to soak you for.

That sound ethical to you guys?

>Flugelhorn! Man, it has been years since I played and had one of those!
Years ago, I had an early model Yamaha trumpet that was not so good, so
I chose a Yamaha flugelhorn to buy out of curiosity. Great horn! I got
so into the flugelhorn, I hardly ever played the trumpet. Then I stopped
playing for awhile, and when I came back, I realized it was the trumpet players
that I always liked, so I bought a new trumpet (another Yamaha. A YTR
6335S), which was a great horn, and I worked on getting the sound I wanted
perfected with that. Still don't have a flugelhorn, but they do sound

nice, and I would love to try yours some day. Hope to make it to the next NYC gathering in 2 years. Wanted to come this year, but had complications with time. Yours, and Steve's CD's are in the mail. Thanks for buying them and I hope you like the music.

>HI Lamont,

Easy to do in the numbers game of warranties. I'm sure with the sales volume they do they can easily handle the loss on a few MOTU units.

I bet the salesman use a MOTU warranty issue as a chance to sell their

customer another product. :)

Wow! Tascam extended part of their warranty to one year, they were always
90 days in the past.
