>Can I run 3 EDS 1000's with a MAC G3 and will it work well if the computer is dedicated strictly to and for Paris use.

Also, I read this on www.parisfaqs.com, (see below) is this saying that indeed it is possible to run Paris on a G5 with a Magma or SBS chassis and if this is being done, how well is it working for Paris users?

Macintosh G5 computers and Paris

The EDS-1000 cards are 5v PCI boards that operate at 33 MHz on a standard

PCI bus, with a 32 bit data path.

That means that the EDS cards will NOT work in the new G5. However, you can use a Magma or SBS chassis and put your EDS cards in that. The larger issue is will a G5 run OS 9.22 or older. Paris no worky on OSx of any flavor.

>Hi Tom,

I have never achieved the 442 scenario but as I know from DJ and others 442
should be main interface so you loose 24bits digital out.

If you use all these don't forget the usehousesync in Paris cfg.

Maybe thats got erased from there or you installed over with no housesync.

I had achieved using the 442 not as main but its ins and outs were not all
working !!

If you try only with three mecs (or four) remember to have a mec on your
last card !

It should work .

Installing on c:\parispro is fine and better for avoiding crashes.

Don't forget to install the subsystem fx on same folder !

Let me know exactly what you do and I will try to help more.

You can call too !

0030-2310-464744

Regards,
Dimitrios

on't have and IRQ conflicts with the vid cards, right? Also,
your sure about which card is "card 1" and so on right? They aren't necessarily
straiight down the line.
Also, have you tried putting the magma PCI card in another slot on your mobo?
Be aware this could change all irq's the magam sees.

What about A G3? This is the format that I ran Paris on when it was my primary
system but I never expanded past 1 EDS card and on 8 cahnnel input card.

I still have the G3, should I saty on this platform or try to go to PC?

I mean, can anyone tell me if a G3 will run 3 EDS 1000 Cards okay?

Thanks,

MicahelAll of the forementioned plugins will do a great job. I will add SIR (free) impulse verb and my favorite Wizzo's

W2 http://www.m-audio.com/products/en_us/WizooWizooVerbW2-main.html .

My symptoms are more like Dimitrios' . Mec 1 shows up (submix A) 442 shows up (submix B, C or D) and usually MEC 2 doesn't show up and lately Mec 3 (submix E) doesn't show up even with just two Mecs and nothing else.

My IRQs had been peachy but I'll recheck just to be sure.
I'll be saving my .var and .cfg files. Are there any others I'll need = to save independently before reinstalling? Do I need to uninstall the Scherzo drivers? I'll be reinstalling today. Should I boot up with all hardware = installed the first time?
Thanks,
Tom

I saw the Police back in the 80s. Sting was arrogant, condescending and was very insulting towards America and Americans. Some people booed him other idiots cheered him. What an ass hole he was toward the people that paid to see him. I like their music, but they will never get another penny out of me, and I'm sure others.
