-----=_NextPart_000_003A_01C6C403.C297EBC0--Hopefully the opposing party, they would stand for our constitutional rights and it's Liberties..

Even more, the opposing party would not be thrill seeking war mongers, who's only agenda is to spread freedom thru out he world (ha hah). I would hope any opposing party will grow some balls and speak out against this tierany. There are just as many Democrats who signed on with the Bush(ites).. But as we saw with the begining of the mid term primaries, those Democrats who were with the Bush(ites) went down with ship.

Evenmore.The thought of spreading democracy into a region were war is second nature for over 10,000 years is laughable at best. Those fold over there(Iran, Iraq,Saudi Aurabia, Seria, afganistan,) will Never stop fighting or give in to so called democracy..Never.

Will you send you son or daughter over to fight??

I thoguht so..

Big volume jumps on startup when you change presets, using unisyn editor
can make it scream into feedback if you're not careful.

Overall it has lots of really good sounds but I'm not a good enough guitar
player to make it worth going to a ToneLab. Also, the ToneLab is not stereo
and I'm guessing the next version might be. I think I have this phobia about
stompboxes cuz they seem to all get chained together and then become one
big mess of wall warts and noise. Let us know how you like the box, that
is a great price.
