>>Hi Guys,

I just spent my first couple of hours with a grace m101. It's definitely the best mic preamp I've ever owned. I learned a lot from comparing it to

my older ones, too. I recorded the same thing on acoustic guitar through all three mic pres with a 4050 pointed at the neck joint from about 10 inches away.

The m101: bright, full, but the biggest thing I noticed was how you could hear every nuance of the pick hitting every single string. It was like the sound had more texture than I'm used to. There is a percussive dimension that is missing or lesser on the other mic pres.

The Presonus Tube Pre: Brighter than the m101 and not as full. All that texture/percussive quality of the m101 is missing with the Tube Pre. It's like a whole dimension of the sound is missing - because it is. It sounds plastic, like a sock is muffling all the percussive content of the sound.

The ADA800: It's not as bright as the other two, but it's fuller than the Presonus. As for the texture dimension, it's about half way between the Tube Pre and the m101. This surprised me because I expected it to come in last. The Tube Pre was an upgrade to my ears above the Mackie XDR preamps that I used to have, and the mic pres in the ADA800 are significantly better than the Tube Pre.

I'd recommend the m101 to anyone. You can never eq back in what the Tube Pre leaves out. Way cool.

I hope this mini review is useful to someone.

Mikel've been having some pretty major issues with Drumagog/BFD. Drumagog works beautifully with it's own GOG format, but is just not functioning properly then integrated with BFD2.

I heard about this on the BFD forum as I was trying to find a fix.

It was just released today.

It does what it says it does with very little fuss. I rendered a kick track as a GM1 file, imported it to Cubase and opened up an Ayotte kick in BFD2 and brought it up under the OH's.

I am grinning like a Cheshire cat right about now. It's working flawlessly. Very nice (ie.....simple/dependable) tool for replacement/reinforcement of drum tracks.

[http://www.toontrack.com/videos/Drumtracker_Tutorial_640x480 .html](http://www.toontrack.com/videos/Drumtracker_Tutorial_640x480.html) For me, confirmation that the 2 ADA8000's I bought when they first came out are still a good value. I thought the same thing when I got the first one you were expecting. Something along the lines of, well, it'll probably suck but I need the extra ins to catch a load of keyboard inputs and the such. If it's even remotely close to a 101, I'm thrilled man. I'm not shocked about the Presonus, most of their stuff I've tried has been less than stellar, but

I am a little surprised the Behr slapped it that badly.
Very cool man, any chance you can put up some comparison files?

AA

This, IMO, is related to SPEED... lots of times you hear people talk about preamp color or tone or what have you, but not very often do you hear about how fast or how slow a preamp is, and how that factors in to what you hear. Sometimes "slow" is good (like Neve-ish type pre's), as it can slap down certain unwanted aspects or transients (like sibilants, to a degree); but sometimes you want a super-fast preamp to bring out the clarity or "glassiness" of something. The Grace is faster than a shithouse mouse, and will definitely let you hear detail you may not have heard before, if you haven't previously had anything able to reproduce at that kind of level of definition.

Oh, and Happy Holidays to everyone! :)

Back at'cha amigo. Merry Christmas to everyone. Here's what we work up to
this morning.....and yesterday morning.....and probaly tomorrow morning
too.

My Christmas present was a big snow blower. Good thing..huh?

;)

Really miserable. :-)

Aaron Allen wrote: My experience with the Grace is similar to yours. I did a comparo with an Old School Audio pre (think API) on a female vocal a few years ago and found it very pleasing. To my ears, it had a tiny bit of something I hesitate to call distortion, but cannot think of another word for, at the very top end, but it was extremely slight and overall I liked the Grace a lot. Extremely open.

Merry Christmas to all! Presonus has made some good pres and some not so good pres. The M
80 was good,
and some of the newer ones are good. Which Presonus do you have? And keep
in mind the Grace is a \$600.00 pre and some of the Presonus tube pres are
\$75 to 149.00, I would expect there to be a difference.

>We didn't use the sub \$200 crap at Tisway. It was the digimax, original
release model. Up against any of the other stuff there, it felt like a toy
and unfortunately held up about the same way. I had Mackie XDR, Millenia and
Demeter to hold it against and it wasn't even close on any aspect. I also
have a Blue Tube in my recording rack when I want nasty/grit. It does a
pretty good classic 60's/70's bass DI thing, but I understand it's a cheap

piece and I expect little from it in the way of prestine, of course. I've also used the 8 channel comp/limit deal they have out currently, ACP88. What a pile of crap that thing is, yikes...
Have they improved the Digimax that much over the first release?

other pres, by users. Of course this is second hand information, so, ymmv.

I was wondering what Presonus mic pre Mike was using?

I've used ACP88s in the past and I would say that the results were not bad.

I can tell you that they source different parts on different runs of the product, so this will effect the sound. Aaron, what compressors would you use to get some drums pumpin for around the same price, if you needed 8 channels?

<http://www.presonus.com/products/Detail.aspx?ProductId=5>

>I looked into the PreSonus stuff because of price. I currently own the
Eureka and it is satisfactory. By turning up the saturation knob I was able
to smooth out the harshness of my Mackie 160vlz (1990 circa) pres. The
Eureka also has a compressor, VU meter and 3 band parametric and with
minimal use of these two items I have tamed my vox. It's a single channel

unit. The newer FireWire, Digimax FS and D8 use a X-MAX pre and per their rep it's their newest as of a couple months back.

>Based on the description at sonicstate, it seems like it uses a fairly
simple subtractive synth architecture:

From http://www.sonicstate.com/synth/akai_ax73.cfm

"The Akai AX73 is practically a MX73 master keyboard (minus some controller features) added with 6 voice polyphonic analog synth. I believe VX90 has exactly the same sound generating circuitry, which is based on Curtis CEM3394 chips (the same as in Sequential's Six-Trak and Max).

The voice is pretty basic, we have 1 VCO, VCF, 2 ADSR's 1 LFO and 1 VCA per voice. There are some interesting parts, though. The VCO's have triangle, sawtooth, variable pulse (with PWM) and a composite waveform of saw & triangle. The PWM actually works with any of the waveforms, not just pulse, which provides a little more sonic variability. The VCF is a 24dB/octave resonant lowpass and self-oscillates quite nicely. Keyboard tracking goes well beyond 100%. The VCO can modulate VCF which is great for ring-mod effects and suchlike. VCF cutoff can be modulated by bender and keyboard velocity, which is one of the best features in the synth. There's also a non-time-variable highpass filter in series with the lowpass filter, which is nice. The two envelopes can modulate VCF, VCA and/or VCO pitch. The lone global LFO is shared by all voices, but has plenty of waveforms, including triangle, up/down saw, pulse and random (sample&hold). There's also a built-in 2-position chorus effect, which is pretty noisy.

Keyboard assing modes include poly, dual and unison, with 1, 3, and 6 oscillators per note, respectively. Adjustable portamento is available in any of these, but it's always monophonic."

End quote

So you could probably create a similar patch with any soft synths that include a suitable subtractive synth architecture, such as Zebra, Pro53, Reaktor, Massive, ES2, ESX24, the Arturia synths, etc. All these and more, while not directly emulating the AX73, offer a superset of what the AX73 does.

Cheers,
-Jamie

s like you.

As far as the idea that the Paris summing/bounce "magic" is easily replicated in other systems and "proven" using phase cancelling tests, I'm not sure what you mean by this (this is what I think you're saying, if I'm misinterpreting, I apologize). Even if you could take the same mix and bounce it from both Paris and Nuendo, then take both bounces and line them up in either software and flip phase on one, and largely cancel the other out, phase cancellation speaks only to panning and frequency. But sonics and our perception of sound, to my mind, have more to them than frequency response alone (beating an old drum here

).

How many companies are pushing their new audio components - mics, tape emulators, amp simulators - as exact replicas of the originals they are trying to replace (at much lower cost and greater convenience) by shoving EQ response curves in our faces? "See, our product has virtually the same curve as the product we are trying to unseat, therefore it must be as good" and then we listen to it, or use it, and find it doesn't sound nearly the same enough? For me, other things like 3 dimensionality (depth) and accurate time alignment - affects attack - are important (when digital first hit the scene everyone talked about it being cold, using EQ terms of reference, yet I knew as a piano technician that the piano concertos I was listening to on CD had much less problem with EQ - any piano can be "bright" - than they did with the attack of the hammers striking the strings, it was just plain "unrealistic"). The thing is, currently we have the technology to measure EQ, but we don't really have the means to measure depth and the psycho-acoustic effects of the more "intangible" items.

>totally true: cant argue with the price point of a dead system.

Yikes! Dead? Using this descriptor is prejudicial, "leading the witness"
so to speak. A variety of dictionaries define "dead"
with phrases like - lacking life, devoid of usefulness, unable to function.
I understand in your paradigm, PARIS is dead (and I
totally respect that, for most of the reasons you've cited), but PARIS is
no more dead than any other piece of gear that's been
discontinued by its manufacturer yet still serves the function for which
it was intended.

A friend recently mixed a semi-major-label disc (more than 400,000 copies
sold) and one song needed a final, final, final tweak at a time when it was
problematic to get back into the studio and use the gear the album had been

mixed on. After A/B-ing to the label and artist, with their permission he was able to largely match the sonics of the rest of the CD, (summed in an SSL through Apogees DA16s to tape), by summing through an obsolete board (out of production for 18 - 20 years), with 8 year old DAs and a new Alan Smart C1 to tape. The current value of the gear in the other studio is \$120K CDN. The current value of his own gear is \$6K CDN (his ADDAs really need to be upgraded...).

This little vignette illustrates in a nutshell why I'm happy to use PARIS - it's not dead, but it is effective and cheap.

Take care and thanks for the dialog, I appreciate it.

Ted

here jump onto the new core i7 processor?

I was about to take the plunge for an Intel quad core system, but now, it looks like the i7 is a better choice. Or is it???

There's a Dell system I can get (in Canada, at [http://configure.dell.com/dellstore/con ... DSXPS_F_2E](http://configure.dell.com/dellstore/con...DSXPS_F_2E)) which boils down to this: for CDN\$1299 you get the i7-920, 6G of tri-channel memory, Vista premium 64 bit, 1TB of disk space, and a 23 in widescreen HD monitor. The questions are:

- do I need to worry about the i7 risks (heat, memory voltage, whatever else)?
- assuming my needs exclude gaming, and that I believe I can live without any future upgrades (other than perhaps more ram), is this a good system at a good price?

I know there are a lot of folks here with experience building computers, so I thought I'd ask around. For the record, I don't have the time or the knowledge required to assemble my own from parts (I wouldn't know what compatibility issues to look out for).

Opinions?

Thanks.

DanHey Kerry,

How integrate the two systems?

Gantt
