On the 7th day, God rested.... Chuck Norris took over.Create a template with delay comp plugs on the inserts of every audio track
in your session. As you're working and want to use plug-ins for processing,
insert a UAD-1 plug-in in place of the Delay Comp plug.Those girls look like they are about to puke on one another.

Bill,

You could do either, though a native reverb would use some of your CPU cycles.
I really haven't tried using a native reverb for ambience while tracking.
I'll give it a go and see what the verdict is.Hi Deej,

Thanks for sharing this. The latency is the one issue that I simply could never deal with in a native daw.

It is really encouraging to hear that native may be ready for prime time. I wonder if a quad core phenom would do as well as the core 2.

Would NoLimt!, the compressors, and the verbs in vst format be something you would use in this new beast? I'm thinking that keeping the algos alive in native form will be the best way to keep Paris alive over the long term, and also keep you ex-pats in the fold.

All the best,

Mike

>Hi Aaron,

I can read the assembly language and translate that to c++ easily enough, but I don't know the first thing about making an emulator. I think that's just beyond me.

I suspect that the biggest thing about the PARIS sound is the quality of the D/A and A/D converters and the effects. I can take a look at the mix bus, but I can almost guarantee that there isn't much to see. It's probably just adding the tracks together and dividing them by the number of tracks. if I remember right, it drops the volume by 6 db before mixing them and makes it up after. But, that's it. It's probably doing it at 48 bit integer resolution (inside the MAC of the chips) before truncating. We could use 64 bits in the VST stuff.

The sound is probably a combination of the converters and the cumulative effect of the eqs, compressors, reverbs, etc. When you blend it all together, you have the PARIS sound. We'll get some of it by porting the effects, but the sound of the converters will be lost to those who decide to move on to other hardware, whether we make an emulator or not.

As for sample rate, all the effects have to take into account sample rate for 44.1 and 48k. That math is already being done. It will be cool to hear how the effects sound at 96k.

Personally, I'm not planning to move on ever anyway, though. :)

All the best,

MikeYeah the drummer's really cool.

But why would you give up on GB just because he sings? He has too much talent? He actually was a pro singer as a child, before he was the jazz great he became.

Thing is he still plays the same but he also sings great. The reason i posted that vid is because it shows how funky he is on guitar AND vocals. I cannot think of another musician who can totally hang with *anyone* on both their instrument and vocals. Can you?
