---=_linux48d6bc62--Mike,

I am actually suspecting interconnect cables. Paris starts, gives me the "eds card is not configured properly" message, Click ok and poof, it reboots. If I for the end of the program from the task manager before clicking ok, the machine is fine. No default project, nothing funky that I know of in the config.

It's been the same thing as I have been adding cards. Keep switching interconnect cables and it finally comes back up. I need to test them all but don't have a continuity tester here at home.

I don't recall what the button is labeled, but in the windows version of Reaper, my plugins come up with a parameter list too, but clicking the button toggles to graphic mode.

The GUI stuff for Mac OSX plugins is amongst the most recent stuff he's
been working on in the beta; I can pretty much guarantee that if
there's a UI issue with them he'll be on it fast, REAPER's one of the
most UAD-friendly apps out there.

THanks,

Jeff If you're handy with a soldering iron.... a battery, an LED and a little wire. Add a pin male header if you want to get fancy later. Obviously don't do this with the header on an EDS card, since we're talking voltage here. Match the rating of the LED with the battery. Go pin for pin to check continuity down each wire, IE Pin 1 on ribbon header needs to match the Pin 1 on the other ribbon header. In this way you use the ribbon cable/headers to complete the circuit to the LED.
Capiche?

I was thinking about your comment to inject channel 1 and 2 in the back as a returns. I've sent PreSonus two emails but apparently they are still not fully back on line since the hurricane so I haven't received a reply to my questions as of yet.

Are you using the FS's AD converter? I just wanted to use the XMAX pre's and the direct outs. I prefer to use the Paris 8-ins on my MEC and not the FS AD converter. My understanding is that the returns are routed to the converter and then the ADAT outs. Is the return directly wired to the direct outs? If so, then I can use line levels on 1 and 2 via the returns as you suggest.

> JohnJohn,

I should have asked this too . . . on channel 1 and 2, coming in the rear returns . . .

This will bypass the XMAX pre's and trim . . . correct? If so, . . . damn, I'm down to 6 mic/line pre's.

> You have 8 mic/line inputs. You can also use channels 1 and 2 as instrument

level inputs. You can use all 8 as mic / line inputs in any combination

but to be able to use 1 and 2 as line ins you have to use the returns which

will also pass them to the direct outs if I remember correctly. I'm 99%

sure on that. If you use 1 and 2 as instrument level ins then you are down

to 6 mic/line ins.

Just give presonus a phone call to tech support to make sure. Killer sound
!requires registration to download. bummerNo it doesn't, not at my end at least..

Jeff-

Not that you didn't know this, but...

If you have any kind of circuit continuity tester around, you can just try the wires in the cable one by one. Not elegant, but it works..

No soldering required! And as a bonus, it will tell you if the line passes partial current as well as if it passes all or none.

-steveAnybody know the Latest MB/PC for Paris? i would like to upgrade.
2 mecs/ 2 8ins mods and 1 adat mod in mec 1,
2 8ins mods in Mec 2
3 eds1000
1 c16
winXP

ThanksI really don't know what to do.

I haven't posted here in a while, but I read often (when I have time). I decided to focus on my studio and get it up to par and more functional.....specifically wanting to sync up with Logic, and integrate the mix buss of Paris with all the new cool stuff of Logic.....and nothing but troubles.

Sorry for the long post.....ignore it if you wish.

I originally thought it was my old Magma 7 slot that was the issue, but it is not. Because after giving up on the new PC I built (see the PC problems below), I tried just the MAC with 2 cards, and the same sound issues.

I am using an old G4 1.25 running OS 9.2.2 running Paris 3.0, and I cannot

get sound to come into, or out of, my second or third MEC. (I have 2 input cards, one output card, and one ADAT card in each MEC). Even if I only hook up 2 MEC's, the second one will not put out any audio. I can play back recorded tracks and get them to come out the master output on any submix, but none of the extra outputs will work (effect external out, or channel insert external out.....on either the analog outs, or ADAT outs). This problem was also there when I used my Magma, so I attempted to switch to PC because my Magma has REALLY noisy fans.

I was hoping someone who is running a multiple card Multiple MEC setup could shed some light on this.....it is driving me crazy. Is this a bug that I never heard about? These same EDS1000 cards passed audio when hooked up to the PC (although I had other issues)

-----On another entirely different note-----

.....I built a PC to try to run 4-5 cards without the Magma, and had nothing but trouble with unhandled exception errors (usually 7c93426d at location 0048c425, although I had one other number that I didn't write down). I thought it was my video card because of the IRQ sharing, So I pulled the EDS1000 card out of the slot that was sharing that IRQ (the BIOS would not allow me to set it differently than the video card no matter what I did.....the PCIe video slot followed my manual settings of this slot.....in addition it was SLOT 4 of 5 that was the issue, not 1 which is next to the video card PCIe slot....also very weird I thought). To make matters worse SLOT 1 and 5 would always assign the same IRQ even if I manually set them in the BIOS as different. I am not sure if this caused the problem, because frankly I am not willing to only use 3 cards so I never tried this.....that was the whole reason to switch to a PC (in addition to the new plugs.....that sound great by the way, even the little bit I have heard.....BRAVO!!! Mike A.)

I am running a Gigabyte GA-P35-S3G MB, with a Intel Duo. The video card is a PCIe GeForce 8400GS Dual head card 512M.

I thought the mother board would be perfect because it had 5 PCI slots (hard to find these days).....I guess I should have checked here and asked all the experts that have been down this road (I feel stupid now). I know enough to be dangerous with PC's, but I am not stupid either, and can handle most things). I could get the system to fire up and it worked with 5 cards, but would always act up when I started plugging in effects. If I didn't plug in effects, it seemed to be fine. I also had a side problem in with the new effects that Mike made....although I was really excited to get them, my original compressor would not pass sound, only the new Paris compressor. He said that should be a problem, so I really don't know what is going on.

Now I think I have more issues than just the compressor plug not working right. I am open to any and all help.....And I may very well need to find an old computer that has already been set up to run Paris. I don't need it to do anything else, so just about anything will be fast enough. Although I want at least 2 monitors (preferably 3 or 4....that would be just awesome!)

Do I have a bad EDS card maybe??? I have six total and have used as little as 4 in different combinations with both the PC and MAC.

I refuse to give up.....I WANT MY PARIS.....do I sound like a little brat? I can't help it.....I can't find ANYTING that comes close to this sound.....even today with modeling plugs.....nothing kicks as much

Am I dreaming.....is there any hope for this Gigabyte MB.

Anybody have an old PC that will run at least 4 EDS cards (preferably 5 or 6) with a double head video card?

I fell like a drug addict.....I gotta have it man!!!.....oh.....and I am a major control freak, so it is VERY hard to even ask for help.....it took me 3 weeks of trying crap before I gave in.

:~)

-Bradley

PS. I am going to break down and try only 2 or 3 cards in the PC and see what I can find out.....I'm tired.....going to bed.....tomorrow is another day.

Thank for letting me ramble.Good to se you back, Kip.

You can now get "Paris-support" for modern dual and quad motherboards with the genius work that Mike Audet have done for Paris. He have also modernized Paris for a better future with oceans of new EDS effects. If you have tried his new reverbs, you'll never go back to the old ones.

I think the "problem" with modern MB is to get enough PCI slots for Paris-use, since MB's now, for the most, have to deal with modern PCI-E slots and AGP graphic's have also changed to PCI-E.

3-4 PCI slots MB are easy to find but 5-6 can be a pain to find.

I'm using Paris 3.0 with a 3 PCI slots Asus M3A MB with a single EDScard and an AMD Phenom 9850 quad processors and 4 GB RAM. Working well for me with the latest PSCL driver to Mike.

<http://www.asus.com/products.aspx?l1=3&l2=149&l3=592 &l4=0&model=1934&modelmenu=1>

Here are some other MB I've found:

http://global.msi.com.tw/index.php?func=proddesc&prod_no=1481&maincat_no=1&cat2_no=170#

It's a 4 PCI slots.

<http://emea.kontron.com/products/boards+and+mezzanines/embedded+motherboards/atx+motherboard/kt965atxp.html>

Maybe the rosin for Paris user's with both 5 and 6 PCI slots versions?
Someone knows more about these?

Cheers

Erling

>>ThanksHi Brad,

I'll see what I can come up with here. I never get unhandled exception errors on my PC. It can be done!

--Check the RAM. If it's not Kingston RAM, replace it. Unhandled exception errors are often bad ram.

-- turn off direct x to see if they go away. If they do, try removing plugins until you find the one that is causing the problem.

--make sure that card one is actually card one. The PC may be reversing the order that the cards are detected, making what looks like your last card actually be your first card.

--make sure your clock distribution system is working properly.

--Make sure that you are locking the app and the driver to a single CPU or use my latest PSCL, which is a beta (so it is not finished yet)

I hope this helps. Who knows, it may even fix the original compressor problem, especially if you've got some bad ram.

Good luck!

MikeIf you can find one, the old Asus A7s333 has been notably stable for years with me here and an AMD 1900+
I have had as many as 4 cards in it with multiple video outs w/o problems, but I used a beefed power supply too so you want to make sure a 600w or better supply is in the deal.

 > Hey Mike - I can duplicate the compressor issue - the original PARIS
 compressor [the one that shows up as "Compres (M > M)" in the EDS fx
 list] is no longer passing audio here either. And now that I think
 about it, I noticed it didn't when I first installed everything a
 couple of months ago.

Not that I'd use it much considering the better compressors you've
 built, but FYI if it helps troubleshoot this.

Hi, Rich,

Don't know if I'm the "small studio" owner you're referring to (formerly of Saratoga Springs, now moved up to Gansevoort), but I'm still here, too. Not much opportunity using PARIS during the past couple of years (no audio work at all, actually, between lots of life stressors), but I'm hopefully gonna be working on recording again this year. (Mac running 2.1 with 2 cards/C-16s, etc.).

It's a little late to be responding to your post, but count me in, guys...

Larry Hogan too did not reply to this post, and I know of one other (ongoing) Paris user here in Las Vegas that does not frequent this group (I tech for him so he relies on me).....now that's a scary thing!

Also 2 other past clients of mine that used to use Paris as recent as 2 years ago that I know of. I will give them a call and see if they are still on board. (Chuck-V, and Juniel.....both Hip Hop guys).

You guys are the best.....even with the occasional argument (or spat as it may seem)

I will use Paris until the day I die.....or until someone comes up with something that sounds as good.

I recently partnered with another guy to start an online type studio service (that is the reason why to completely integrate Logic and PT's with the light-pipe options), and I introduced him to Paris, and he is absolutely blown away, and when I told him it is 10 year old technology (with the exception of the ongoing development), he is truly left speechless, and can't understand how something like this could have been abandoned.....oops, I didn't mean to start a rant.....sorry.....don't reply to that comment.

At any rate, we plan to use Paris along with some outboard analog gear to enhance and remix and master already recorded stuff, whether originally recorded in PT, Logic, Cubase or Sonar (amongst some other services)

I haven't found any one who can argue that Paris just sounds deeper and fuller than anything on the market (even today). I have taken complete ly polished and good mixes in Logic, and sent them out the ADAT stems into Paris, and without even giving them a touch of compression (which even makes it sound better IMO), it sound bigger fatter and louder than any plug-in combination you can put on the mix buss.....and Logic is one of the best sounding mix engines out their.....again IMO.

Thanks for all the help.....off to try some more stuff (a good nights rest always gives you a better outlook on the issues at hand.....don't you think??..... :-)

> Larry Hogan I have Patriot DDR2 800 MHz 2 GIG sticks (2 of them).....you think they may
be bad?

I have an old memory checker program I could run on them.....or will that
not test it thoroughly enough?

My clock is fine.

I have tried both the Task Assign app, and your new PSCL, with no luck.

I think it has something to do with a particular PCI slot (and/or IRQ), as
it seems to only lock up when I use the 3rd instance of the compressor on
the C submix.....A and B seem to run fine. I can insert 8 compressors, but
when I open each one up to adjust them, the third one always throws out the
exception.....weird huh?

I am going to try some trouble shooting tonight and try just 3 cards and
swap some card in and out to see if it is hardware, or if it is the shared
IRQ on slot 1 and 5. I can get 3 distinct IRQ's, just not 4.

I will let you know what happens.

Thanks again!!

I'll be very interested to hear whatever other names you turn up. PARIS
was fairly prominent in the rap/hiphop scene here through Dubvibe's
work with artists like Sweatshop Union, there's something about the
platform that makes it a good mesh.

RobHey boys and girls, when considering all the other places I could have taken this, I always came back to "these guys pretty much tell it like it is." So I am here for some evaluation of the kneejerk variety. I've had this notion to set up for doing guitar tracks across the net but haven't been able, until now, to approach it with any due constant infrastructure despite having 20GB of server space. And before I do all that (okay, I confess, I bought 4 domains - www.hotguitartracks.com, .net, .org, and .info - it was cheap - 25 bucks for the first year - nothing hosted yet) I wanted to get some feedback from the hood about the main ingredeint, the guitar playing, styles, tones, etc.

Yeah, I know, your friends are almost always the wrong folks to ask but which day was it that this group didn't collectively hold a high degree of objectivity when the thread wasn't a political one? Well, this ain't politics so I'm comfy soliciting your grumbles, applause and mediocre fanfare so long as it does not include the words "suck" or "dribble" or "awsome" or "great."

By no means is the sampling as broad as it could be and the presentation here is on a lone, previously hidden page of an existing site which was quickly mocked up in the wee hours of a sleepless AM two months ago.

No holds barred, no bars held... go at it... comments solicited without construct.... directly to me or here on the group... I don't care so long as it is informational and critical. My email is "mark" at the domain below.

<http://www.avidrecording.com/audio.htm>

Thanks in advance.
W. Mark Wilson

Oh, ps... ANY guitars you hear on these clips are me despite the focus of the individual clips and please, please... no comments about my vocal chops or I'll, I'll...I'll clip your toe nails really short. Some bass and keys stuff on there too but not a focus.I think that's a pretty good demo, FWIW.

You wanted critical input, so with that in mind I'm looking hard for
things to criticize - you might consider some "streetier" or
"grungier" sounds, ie the "less slick more sick" side of dirty geetars.
Signature oddball sounds can capture folks - got a baritone? A
Danelectro for jangle? Slide/Dobro? A ukelele? Something odd that
sticks in folks' minds and says "this guitarist over that guitarist"?

Good work.

>Hi Kerry,

I'm still using PARIS. I mostly record my own stuff and a few friends.

I don't do anything commercial as far as recording. I'm hoping to sell the music some day. I just finished another song for the album that is going to take a decade to complete. I probably should name it that.

Anyway, PARIS still works for me. I have no desire to learn a new tool.

I have a four card system, three C16s, and an MEC with an 8-in and an 8-out.

I have spare cards and an MEC. I run 2.2 on XP.

Put me on your list if my useage counts.

Rich KelleyI listened to the lead reel, nice work! You demonstrate a real mastery of the styles presented.

Cheers,

-Jamie

>>> I think that's a pretty good demo, FWIW. Same concept here... it's usually a stereo file they've
send me to cut
to (some folks have sent MIDI tracks; that can be various flavours of
hassle).

A drummer I've worked with for years is quite organized about this (he
does five or six internet sessions a week, some multi-song). After he
tracks he does a quick mix and sends the client an MP3, but with
spoiler beeps inserted. Once the client listens and signs off and the
PayPal's deposited, he ships the full-resolution tracks (mixing
optional and extra). <http://www.e-studio-drummer.com/> if you're
interested.

>Hi Brad,

It sounds to me like you might have a bad effects daughterboard on one of your cards. testing the ram is a good idea, but it can sometimes miss things. You could also try manually relaxing the memory timings in the bios.

The IRQs shouldn't matter, unless you have another driver on the same IRQ

that is misbehaving.

Let me know how it goes.
