"Moulin Rude"?

Bwah hah hah hah hah!

Now there is a band name if I ever heard one...

DCNice... what, about a 4 second decay time?? ;-)

It will be "fun" when it's finished!

David.

I would sure like to see us on a more practical app though.

And yes... we hope something will be forthcoming in Pareee

SOON

did I say that? did I say SOON? Ok, shoot me, go ahead...

DC

>Hey, Mike

I was reading one of your posts awhile back that you are using Paris on an AsRock AM2NF3-VSTA Motherboard with 5 PCI slot running XP, and I was wondering how is it working out. I believe you are also using windows 98 as well.

(1) I am curious as to what you are running in XP? And also, (2) curious

98, but I would like a box with XP. My setup is a Pentium Intel 3 Processor with 256 MB of ram with 5 PCI slots. The five PCI slot on the AsRock is

give me the rundown of all the hardware, program, and memory that you are using with this board? It would defiantly be appreciated.

This may be a stupid question considering all the new plug-ins you have created, but here goes: Did you build your own computer? Man! that was a scary moment.EK Sound <ask_me@nospam.net> wrote:

>Nice... what, about a 4 second decay time?? ;-)

Nope. I was shocked. About a second RT60, and few flutters. There is acoustical paneling all over the place. A very pleasant room. How often do you see that??

We did a building by the same architect that looks just like this, that was all marble and 4 seconds! Unbearable.

This one will be pretty easy.

DCYep, works for me.

> Cheers,

> Kim. At a glance it's perfect. I'd have to spend a few minutes reading up, but I'm assuming that you'd be able to choose an NNTP server which wasn't actually part of Usenet. We're effectively our own mini-usenet, but I can't see why it wouldn't be possible to run that thing, and hang it off this server, which would give us:

(*) Two web interfaces & two NNTP servers

(*) Redundancy

Or I could update here really, but I'm loathed to touch the thing given it seems to just keep working.

Which reminds me, I'd best go run a backup. :o)

Cheers,
Kim.

This will all die down shortly, don't worry. I'm part of the straw in this case and feel a teensy bit bad. Not much, mind, because I just made a pretty harmless joke and someone, I have NO idea who, went postal.

This is a really low traffic group, though, so your input (and microphone castoffs) would be very much missed. Drop back after a bit and I don't think you'll be any the worse.

Yes I still have it and you're welcome to it.

Shoot me an email and we'll discuss options, as I'm still using it currently but want a new one ASAP. Don't know what use this one will be to you, but I have it, and it's yours if you want it.

Cheers,

Kim.What's the matter Neal, you can dish it out but you can't take it? So now your going to take your ball and go home?

Sure there can. Perhaps this has something to do with the majority of the threads you "start" having something to do with Apple?

How on earth can someone take a computer "personally"? When you trash MS, I don't take it "personally", though I have used both platforms and have a preference.

If Thad hadn't beat me to it, I would have probably popped off with some smartass comment, but probably not nearly as hilarious.

It was interesting to see Bunel (whoever that is)show and nice to see Derek make an appearance, even though last time I looked Derek and I had some seemingly irreconcilable differences.I know this was just a typo - but I loved it anyway. Keep up the defiance!

>>> JohnDeej, if you will take notice, I have NOT posted anything trashing MS in quite some time. You and John and others have posted Mac bashing videos in recent times. so who's starting it? I let it go. I can take a little ribbing from time to time, but it is now getting personal.

If you go way back, and your honest and objective, you'll see that people here on this NG were bashing Macs before I ever started on MS. I've quit. In recent times I have only post information about what's going on with MS, you read the articles and you decide. I've tried to lay off, but I think Vista is a debacle right now, I'm sure MS will fix it in time.

I see Mac OSX being a better alternative to Vista right now, and you can build a dual quad core for about \$600.00 to run it. I've wanted to post about it specifically for you, but I didn't because I thought you would take it wrong and be insulted by my suggestion, and I thought it would start a bunch of shit. You see, I feel I can no longer post anything that is mac related without being attacked. Have you seen me attack every post

that
is MS or Vista related recently?

Don't forget I also use Windows XP also, not just Macs.

I think SOME people should consider what they post, things have gotten personal and insulting. Have you seen Dedric around here in a while? Someone basically called him a racist, he's out of here! All of us should think where this is going. We all have something to contribute to the NG. some people may not be in to the Mac stuff, but they don't have to jump in and comment on it if it doesn't concern them. It's not once in a while, it's every time.

The Mac bashing and the mocking needs to stop!

>Hi Terry,

I'd keep 98/Me if you can and dual boot. Some have said that the sound in 98 is different. I've just noticed that the XP driver is a bit temperamental.

Also, XP disk caching is a pain in the ass if you don't have more than a GB of ram (1.5 GB plus). Just for your own flexibility for getting around any XP issues when you need to, I hope you'll keep 98.

Cheers,

Mike

<excelsm@hotmail.com> wrote:

I'm one of "those guys" , but I don't class myself as using a MAC.

I use the MAC OS because for me, at the moment, I like the way it feels,
and... It runs PT better than in windows mode.

I also run Soundtrack pro because a lot of my clients use FCP and it's
convenient for them if I can work on their files directly.

Saying people are tweaking "Hackintoshes" isn't really comparable to saying
your tweaking a MAC though.

There wouldn't be too many, (if any) people actually tweaking a MAC.

Martin H

> I read this on Gearslut, posted by the tech guy at FXpansion. I realize that
some of the UAD plugs, such as the Pultec, have a slight variance on the
"standard" latency, but can anyone confirm the 2 x latency? What interests me in all this is
remembering a certain other fellow
(someone once called "the list pothead") who was also volatile and
would follow people he did not like and post mildly harassing comments
now and then.

We learned to not engage him on his favorite trigger issues.
It worked, and we mostly got along.

Well, if James ain't got it now, he ain't gonna get it. He did not come
up in the studio world back in the 70's and 80's like some of us, and
never learned that cheerleading for a brand immediately marked you
as a civilian. Now, I am not talking about telling another engineer
to check out a mic pre, I am talking about engaging working professionals
in bitter disputes of one brand vs. another. Studio guys simply don't
DO that. It's like the Ford vs. Chevy guys! I cannot imagine anything
more boring. As a 2nd engineer in a major facility back in 1980, if you
hammered some other engineer about how (say) Quad-Eight desks
RULE and Harrison's SUCK, and you lost your sense of humor and
professional attitude, you would (if they liked you) get a stern lecture
about how we don't CARE about brand loyalty, we only care about
results. If you did it again, you would be shown the door.

Well, times have changed, and now we use consumer hardware to
do professional work (like everyone else does) and the consumer
brand-loyalty thing jumps right into our business, and it REEKS.

I fuggin' hate it.

James understands the negative fact that we hate it, but he does not
understand the positive reasons why we don't DO that.

Ok, so I am going to try this once more, and James, if you pay attention
you can remove yourself from the center of this sh*storm.

There are all kinds of wonderful people making wonderful recordings
with different gear than mine, and even different platforms. I don't
want them to not talk to me because they think I am not a pro and
care more about brands than talent.

I care about music, not platforms. It's that simple.

Now, what about the mac bashing? Well that has been going on since the

early 90's or so when the pc people would predict the demise of Apple every few weeks, and some IT directors would try to ban macs from the building. ho-hum, they failed. Big time. Apple is firmly established as the BMW of comp builders for both good and bad. So the bashing is largely impotent pecker-waving by the jealous, and some of it is legit from people who can get more performance for less money elsewhere. (like buying a Vette instead of a 540)

Who the fugg cares?

Now James, you owe a bunch of people here (not Thad!) an apology, and I suggest you leave Thad alone since you are just encouraging his worst instincts...

Or you can never be a part of the community of engineers.

It's up to you, but I think you can do better.

DC"TCB" <nobody@ishere.com> wrote:

>Oddly enough, I suspect DC and I would get along pretty well in

You're right, and you can still kizz my azz, Mr Pot, Kettle, Black, for your patronizing characterizations. Especially considering how pitifully little you do to get along with others.

Having said that I know a great pub out here and the first round is on me. No strip clubs though.

DC"DC" <dc@spammersinhell.com> wrote:

I should explain that I'm referring to the irony being in the statement itself,

not directed at you personally/generally.

Just seems odd to have a go at somebody, when you're having a go at them for not making an effort to get along. ;o)

I'll shut up I think. Where's that delete post command? ;o)

Cheers,

Kim.Would you move this thread to "general", Kim? This relentless, bitter, adolescent negativity is killing any urge I might feel to do something positive for this community.

Oh boy oh boy oh boy, DC can I join your club of real engineers? Please!

Please! Please! Dude, you have got to be kidding me! You don't know anything about me. I have worked on Harrison consoles in the past and some of them do SUCK!

I'll say again, I didn't start the shit here on this NG. I didn't start stirring it up the Mac vs PC war stuff on this NG, some of you guys did years ago. I got sick of hearing the same old repeated untruths about the mac platform, so I jumped in to straiten it out and give some information. If you want to believe that the Mac can't run as much software titles as a PC go ahead, but the truth is, Macs have been able to run more titles than a PC since about 1994, if you say other wise I will try to educate you.

I find it funny that the people that bash Macs don't use them. If you don't use them on a regular basis, how and the hell do you know what your talking about??? I use both, I used PCs before I ever used a Mac. I believe, for most people, if you used both you would end up preferring the Mac. I also believe, for some people it's a left brain right brain thing, and they will never like a Mac. For others, I think they are just stubborn, or brain washed or ignorant, these are the people that will go to their graves insisting that Macs suck. Until you use a new Mac for a couple of years you won't know.

I don't give a rat's ass what you use, just don't bash the mac when you don't know what the hell your talking about. Don't mock or insult mac users and you won't be mocked or insulted. It's like telling someone they are a dumb ass for paying \$3,000.00 for a compressor when they could have bought a RNC for \$175.00, and then talking about your new \$3,000.00 mic pre you just bought. You don't know what the value is that they are getting out of the \$3,000.00 compressor, and you got personal and insulted their intelligence.

It can go both ways, tit for tat. I didn't start the shit here on the NG.

I didn't start the shit this time, Thad did, and John and Neil followed.

I haven't made any post that would stir any thing up in quite some time, but others have. If I post anything about Apple or MS it's information.

You may not like the information, but the information may not be for you.

Any posts I make about mac information draws fire now. It's not about Apple, MS or Macs, what it is becoming, is personal. If someone is going to mock me, ridicule me, put me down or insult me, they can expect to get it back.

Don't pile on and then patronize me and tell me to chill out, if you do, you can expect it to get ugly.

It's become obvious to me that a few people would like to drive me off the group, and they may get what they want, or they may get exactly what they asked for, but the group won't be the same.

DC, I don't appreciate your little talk. If you want to view me as the center of the problem, I'll note your position. If you want to shun me or ignore me or whatever, go for it. Wait just a minute there Thad.... correction!.... you slammed me pretty good once when, pre-spider-hole capture, and subsequent lunar courtroom outbursts, you asserted that Saddam Hussein was a "genius." But in all fairness, I more or less told you I thought that was about one of the stupidest things I've ever heard.... although, as was the case then, time will tell.... or already *did* tell... you tell me. Maybe he was just a half-genius, half-idiot and we were both right and all that living like a groundhog finally brought his murderous consciousness to the "surface."

I recall you left the group for a looooooong time after that.... kinda like Neil plans on apparently doing. Ain't it funny how a few dirt clods wafting through the air brings out the sandbox brow beatings on newsgroups! I still marvel.

Having a go at him is one way you get along.

Remember SSC, he was even more abrasive than
Thad is, and yet he was a good guy at heart.

Just trying to look beneath the surface.

DCDeej called & also e-mailed me & seemed to think I was offended
at something herein, and it seems James' comment about "you can
dish it out, but you can't take it", indicates that he felt the
same way... well, no one's offended me or insulted me here
(not lately, anyway - at least not that I can recall), so I just
thought I'd clear that up. My whole reason for leaving is
simple, and that is: there are simply no posts about music here
anymore.

I mean, I've not posted here much lately, but I have checked in,
and when I realized that yet another week had gone by with
nearly zero music or recording-related posts, I just tired of
it.

I never minded the occasional OT thread, and in fact, I always
felt that some of those were part of what made this community
interesting (Deej's dogs, Don's pics of the latest snowstorm,
etc.) But, good gawd... look at the past week or two's worth of
topics - forget about the fact that the community is smaller &
hardly anyone uses Paris anymore, does NO ONE here want to
discuss music-related stuff, but rather simply use this as a

forum for anything BUT?

Anyway, who am I to tell you what to do with your sandbox? If you want to play in it in it's current form, then feel free... it's just not for me anymore.

NeilKerry Galloway <kg@kerrygalloway.com> wrote:
>Would you move this thread to "general", Kim? This relentless, bitter,

Well Kerry you missed the damn point.

DCWell, I made a real effort to help you here.

When everyone else was bashing you.

And this is your response?

I guess you really can't do better...

silly me...

DC

I may go buy a PC now, after washing my hands...

general section and been quite disciplined about it.

I would suggest that the rest of us do that, and further, that
when someone doesn't, we let them know that they should...

immediately...

And let's do a moratorium on all platform war nonsense please. If someone feel obligated to post that sort of thing, can we please ignore them?

I have a lot going on musically, and would love to talk about it here, and your input is always worthwhile.

DCHmmm.....music related....here ya go

Just mastered by Bob Ohlsson of Motown fame (invoice paid yesterday - hehehe)

Beyond Opposites by Mike Kay and Don Nafe (mostly Mike) and a shitload of friends

Recorded on Nuendo and Paris

Mixed totally in Paris with the odd side chain to Nuendo

Genre's covered:

New Age
Guitar Rock
Country
Jazz (sort of)

if'n ya want some tunes just email me with your specific genre request and I'll send you a shitty mp3

>Ok, you guys seen this?

This is an amazing tool especially for recording guitars direct.

<http://www.fractalaudio.com/>

This is a revolution in processing and quality for amp emulators and FX.
This guy has really good ears and this box finally starts to deliver on the
promise of amp modeling and the FX are stellar.

Cliff regularly releases updates and posts of several forums, so the
product gets almost real-time feedback.

I want one. Take a look.

DC+1

David.

How about \$349

<http://www.voxamps.co.uk/tonelab/Murders> it, and you get Eventide-quality studio effects to boot.

Someone I know actually recorded some clips totally dry, just amp
sims and challenged anyone to tell the difference with real amps.

The Vox is a good piece, and for bands where the guitar is
not front and center is fine. What is bitchin' about the Axe-Fx is
that it is winning over the "tubes only" guitar guys. The routing,
customization, effects order, and much more is beyond anything else
out there.

I want one. Oh, and I want the Ultra version which is 2200 something.

So mock back, fer Pete's sake...

Yelling at Thad behind some patently fake persona and
dragging the whole list down is unacceptable

You do it because you are too sensitive to mac-bashing.
It's just gear. get over it.

Tell you what, go find an old mac, say a dead one, and
gleefully take a ballpeen hammer to it.

Then a PC.

The whole time repeating:

I don't care about brand loyalty
I don't care about brand loyalty
I don't care about brand loyalty
I don't care about brand loyalty
I don't care about brand loyalty

Then post the pics.

or not...

>Neil, FYI, my post that drew the fire was relevant to music and some of the
guys here. When you piled on, I called you out and you announced you were
leaving, that was the reason for my comment.

I'm NOT looking for a Mac vs PC war, I have much better things to do with
my time! I just don't appreciate being mocked every-time I make a post that
has to do with macs, if I am I will fire back.

I don't so much care about DeeJ posting the new Apple product joke, I like
Deej, it's a few of the other guys that are trying to insult me, and it's
time I point out that it's every time, and I'm not laughing. So I'll say,
Thad and John, if you guys want to keep this up, if you want to make it unpleasant
to post here, I'm sure it will damage the NG. People will leave.

Trust me when I say, I have held back on posting "every apple news release".
I'm not looking to stir it up, I would rather the NG be about audio, macs
are part of that. If there is a mac post and your not interested in mac
related stuff, ignore it. I will try to refrain from making negative comments
on MS, as I have been doing.

The choice is up to you guys, we can respect each other and have a more peaceful
NG, or NOT.

>DC
>See DC, you don't get it. Reread my past posts. I don't care what you use.
I use both Macs and PCs, I prefer Macs, but it's not about brand loyalty.
I'm just passing information on to some of the other mac users that might
be interested. It's just bullshit to get jumped every time I do. Some times
I might even post about something that is mac related but not audio related.
Things like BlackBerrys have been discussed here, it's not a reason for
a war. I'll try to post to the general NG things that are not audio related,
however, if nobody else follows this rule, nobody should expect me to. One
other thing, a lot of people miss what is posted to the general NG. I personally
believe that if the NG is divided up too much it will fall apart.

This is nothing but a threat.

I think it is time for a new app to host the group on.
One that can be moderated.

James, you should be banned for threatening the peace
and future of our little group here.

Shame on you.

DCJamie, sometime your the only voice of reason around here.

My statement was not a threat, it was more of a matter of fact. If people are going to mock and put down others it's not going to be peaceful around here. If people are going to disrespect me, they will get it back, got it?

DC, what you have insinuated was a threat. If I don't go a long to get along, I will be ostracized from the community. Now you saying I should be band. I think it's you that is being threatening.yeah baby!

Good work Don.

I put them up on the studio monitors. comments follow:

Two is a cool prog sort of thing. Where is Neil??
Good sound, man. I might pull the bass back a hair and fatten the guitar a bit and do a multi-band squeeze on it, but you are close indeed.

Why Me? is great! Kind of Gregg Allman meets Trower...
I love it. Great vocal sound, again I want to hear more meat on the guitar.

Beyond Opposites Cool tune. I want to hear the spoken vocal parts a bit more. Just a db or two. I might thin the electric piano just a bit to give the bass more room.

On Your Left I want to hear more reverb on the girl singers.
Just a thought.

Puppy I want to hear a bit of a scoop in the acoustic guitar say 150-200 or maybe a bit lower. Great guitar sound otherwise. I would bring the lead vocal forward a bit. Again, I want to hear more reverb on the girls.

Anyway, that's just my .02 and don't mean a thing.

Great work! I need to get off my butt and do some more recording of my originals.

thanks for sharing these!

Not of my doing. See, I am still talking to you.

Surprised?

>Now you saying I should be band.
> I think it's you that is being threatening.

Oh yeah, you threatened not me, but the peace of the group, and you have shown that getting your revenge is more important than the group is to you. So, if I could, I would ban you. I prefer that you develop a sense of humor towards even those who mock you.

Am I wasting my time here?

Hehe. It's been totally on my list but I can only get to the post office really on a Saturday morning. I'll try and get it away this weekend. It's just that there's a lot which I can only do Saturday mornings, so it hasn't made it to the top of the list yet.

I'll make a special effort. I haven't forgotten. :o)

Cheers,

Kim."Ted Gerber" <tedgerber@rogers.com> wrote:

No. In fact I only heard about them just recently. I'm not sure we really need extra processor grunt with CPU's as they are these days, but the main question is what the plugs sound like of course, because if they're worth the money and will work then who cares what drives them?

Have you tried? Any good?

Cheers,

Kim.If I could use it with low latency in CUBase, it'd be a 5 as well.

 but am tired of using 2 apps/computers in the workflow.
 LiquidMix/Duende won't work under Mac OS 9.2 but will work
 in XP, which Paris also will work in. Hence my inquiry,
 I would switch from Mac to PC if these external firewire
 plugin boxes will play nice with Paris and a PC at the same time.

something akin to RME stuff.

Does this have something to do with a possible adaptation of something like "asio 4 all", or a complete rewrite of the embryonic "ParisAsio"??

> MikeThe automation is definitely a little buggy, but I've never had it just stop
working. I'm assuming you've quit the project and rebooted it with no luck?

How about this: Copy all the automation into a new project (remember that
you have to paste the automation info at the very beginning of the project
and then paste your audio where it lived in the old project), copy the mixer
settings (I know - you have to save all your plugin settings and re-instate
them after copying a mixer - PITA, but it may take what it'll take!) and
copy all your audio files to the new project. Hopefully it'll work.

Gantt

> MikeJames, it occurred to me one of the reasons people are a bit turned off
by Mac info is, a lot of us use PCs and have for years, warts and all.
We see these wise-ass commercials on TV all the time that portray pcs
(and by association, pc users) as fat, sneaky, boring losers and after a
while we get fed up, so there's a good bit of Mac jadedness among us.
Then when you post about all the latest Apple news and stuff (not that
you shouldn't if it is on-topic, as the video editing s/w was) you can't
blame us for getting a little wise-assy back at you, since you are the
only available target for our McBacklash.

On top of that many of us have finally figured out that you and Apple
are part of a vast Scottish conspiracy to swindle us out our money with
over-priced computers and underpriced hamburgers.

The interface is a little less than fantastic (I'd like to have reasonable
copies of the units modeled instead of one interface for everything), but
the sound quality is up there and in some cases I think better than UAD plugs.

Great for rock'n'roll where an EQ and comp on every channel isn't uncommon.
Nos so useful for electronica, dub, techno, etc. and so forth.

UnflappableHere's a taste of a couple of my latest mixes I'm working on for an Australian band. Let me know what you think. This is a lot more fun than fighting ! Look ma, eyes a producer !

<http://www.kfocus.com/temp/sample1.mp3>
<http://www.kfocus.com/temp/sample2.mp3>I just had a thought (now THERE's a dangerous prospect!) - If the MECs all have to interface w/ the computer thru the EDS cards, wouldn't an ASIO driver have to be able to talk to the EDS cards? And mightn't some smart software engineer be able to think of a way, while accessing the interfaces, to make use of all that processing power on the EDS cards? Does that seem like a totally stupid thought or a do-able thing?

>And while I'm having potentially stupid thoughts...

Suppose you wired a guitar to send the treble PU out of one jack and the neck (and middle, if there is one) PUs out of another. Then, you design an amp with two switchable channels so you could, for example, have the bridge PU going thru a big, fat, saturated Dumble-esque (please don't sue me, Alexander!) high gain channel and the other PU(s) thru a shimmering, warm clean channel.

Flip the selector switch to go from lead to rhythm. Or run both at the same time for fat, sustaining distortion w/ a nice clear, articulated note underneath. Or switch the amp around to have a little crunch on the neck/mid PU and bright, clean Tele twang on the bridge PU. You could start the experiment by wiring a guitar in stereo and using two amps.

Hmmm. I might have found a use for some of my down-time this week!

GanttThat did cross my mind :D

I have one and have used it on a variety of inputs. Loved the brick
wall for taking in rap and some vocalists. Seemed to be a little
sterile for acoustic guitar for my tastes (like it a little warmer).

JHSeeing as my statement could easily be misconstrued, let me clarify
something here: I'm only inquiring about building a lifeboat right now, not
whether we can have Jello pudding on board :D

Funny indeed. I'm playing, writing, and recording more music by far =
since I got my nursing degree and started working full time at the =
hospital. Music will always be my first love, and having my "spare =
time" become so much more precious has only inspired me.

Hi all,

I had a 'once per year' senior in high school start to study with me =
tonight. =20

He is using his experience here for his senior project. I was =
giving him an=20

overview of the studio build, hardware, software and life that I =
live as an owner=20

operator/musician. His reaction was what I had expected. Impressed =
and=20

overwhelmed. He will be attending college for audio engineering in =
September.

Most oddly, I also started feeling overwhelmed encompassing my=20
accomplishments to date, albeit modest, and goals I still have. In =
verbalizing=20

it tonight I realized I am truly lucky to still be as motivated as =
when I was in=20

high school dreaming about how my career might unfold.

I hope we all appreciate the complexity and fulfillment of our =
artistic/scientific=20

selves. The rewards can seemingly be taken for granted as in my =
case. =20

All better now. =20
