>I have a reel-to-reel Tape of The Cream Live Oct 1968,Chastain Park,Atlanta
Ga..I was 15..My friend, who owned a music store, knew the sound man,and he
let us set up 2 mics and tape it in stereo,at the board position...They did
basically the same songs back then,as on the RAH DVD..I assume they also
taped the MSG concerts in Oct.....The new DVD sounds nothing like the "old
Cream"...I totally liked Clapton when he played his Gibson SG (as he did on
Live at the Fillmore)..his Strat tones are not nearly as "psychedelic"..and
of course the Drums and Bass also sound much cleaner now....Bruce's new
version of "Train Time" was

ee "classics would give you 3x16=48 Adat in/out, 3x2=

6 channels SPDIF in/out and 3x3= 6 channels of audio in out (24bit 96khz)

That is pretty much what you need , right ?

But you cannot imagine what extras you get with pulsars.

First of all top notch digital sound with "Sony oxford algorithm consoles

!" with module consoles like 48 stereo surround track console ! and you can use as many...

You will have 18 Sharc dsps on boards, great 1176 emulation compressor (Vinco)

also very good mastering device "Optimaster" fantastic synthesizers like Oberheim, Moog, B3, Odyssey, which are considered the best synths on the market now that emulate true analog sound !

I have them and I know it !

You can have the VDAT recording package whiuch is an "ADAT" environnement harddisk recording system with as many channels as you want with up to 32 bit integer ! not floating ...

Great effects (all dsp oriented) many midi in outs , you will have 3 midi in/out/thru with 3 cards.

Note that Pulsar is a modular environnement with unlimited possibilities.

For instance you can merge (whith Pulsar module) all midi inputs to drive a single destination like a Pro Odyssey synth, or whatever...

It seems like Paris patchbay but it is totally professional with great graphicsyou can make money off musicians???????? when did this start??????

when did they get money???????? when did they learn to count past 1 2

3 4????????

;o)

Looking at the the old SSL384, Alan Smart, API 2500, or maybe Pendulum Audio too; or whatever.

Thinking of using this with the Neve VR60 I'll be using, but also possibly with PARIS or PT.

Thanks,

Pete usually leave it for the mastering engineer. Remember, it's easy to compress after the fact. It's difficult, if not impossible, to undo the compression after the fact. When I do my limited version of mastering I usually use the UAD-1 Precision Limiter, although I have been known to use Waves' limiter too.

gantt

<http://www.snopes.com/photos/arts/xmaslights.asp> I bought my 3rd EDS card about a year or so ago, but never plugged it into the computer, thinking that I'd save it for a backup or whatever. I finally decided to put it in the computer last night, since most of the stuff I'm recording lately I've spread across 3 submixes, and having to always have one submix be rendered was starting to be a pain in the ass.

Anyhow, I plug the card in and boot the computer and XP recognizes the new hardware, says it's already got the driver, would I like to use it? Click yes, "hardware installed successfully".

Then I launch Paris, open up a 3 submix project, switch them all to card....

and....

IT WORKED THE FIRST TIME.

Unreal. so I'm totally geeking out that I was able to add this third card, almost plug-and-play, and it works. Clean living, right?

Well, almost.

About a minute into the song the computer just shuts down
