your
right sleeve you have to reverse the flag.

Don't read anything into it.

Peace,
BillHi all,

I used to hang out here all the time, but its probably been a few years now. I just stopped by to see if there was still activity.

I don't use PARIS much any more except for basic tracks, then I move everything into Logic Pro for overdubs and mixing.

I've been seduced by the plug-ins and automation available in Logic. And yes, I can hear a difference on the mix buss... It still wrenches my gut sometimes, but I can't help myself. ;-)

Last time I was here people were talking about using PARIS as a mix buss for Native DAWs. Are there people still doing this? Is it worth it?

Thanks!

BillIn the UAD-1 meter control panel it will allow you to allocate *x* % of the card's resources before it chokes. Open the control panel and set it to allow around 95% resource usage..

Deej

way a bigger power supply is always better and EDS cards need very big
one especially if they are more than two cards...

I don't know if it is the PSU or not, but if you're running 4 x EDS cards and a full load of HD's, you're probably skating pretty close to the edge.

t;
>>
>Pete,
If everything is black and no beep at power up, there can be so much that's doing the trouble. First of all I think you shall take of the powercable back on the computer and let it rest some minutes without any passive power at all. Controll all the cables to see that they're OK inside and outside and try starting once again. If nothing's yet happening and it's all black yet, there can be many different faults. First of all, control the powersupply that it's OK. If so, it can be a bad seated or collapsed graphic card or a collapsed chipset on the motherboard. It's not good to say at all, this is just some ideas I have that I know can make these kind of problems.

If this doesn't work, reseal the video card. Double check the VGA cable
connection between the card and the monitor (both ends). Reboot.

Good luck

>My friend, Rudy Bear, came by here today. Rudy owns Trimble Hot Springs
across the street from my house. He usually has weekend jazz concerts at the
Springs on the weekends and there is a nice stage/covered pavillion area
there.

He was one of the big movers and shakers of the Telluride Jazz Festival for
many years He was talking to Winton and Ellis Marsalis earlier today and
they are setting up a foundation to help the flood victims. He asked me if I
would give him a hand putting this together.

Of course, since I'm a redneck ***hole, I told him to **** off.....

;oP

,
,
,
,
,
,
,

'.....but seriously folks..... I've got an experienced and very
good sound man with a nice A & H board who has tentavily committed to this.
and it looks like this will be coming
together either on the afternoon of the 25th (a Sunday) or the next
weekend..

All gate proceeds will be donated to this Marsalis foundation. If any of you
jazz musicians are interested and would be able to come and donate your
time, (or if any Parisites would just like to attend), I'll put you up here
and feed you and we can have some fun.

Send me an e-mail at animix@animas.net or give me a call at 970-375-7081."DJ"

Rudy Bear? Wasn't he a character in an A.A. Milne book?

:)What sounds does your computer make when it boots up.....beeps etc.?
It maybe the video card need reseating.

in.<http://www.digitech.com/products/gnx4.htm>

OK, so maybe the recorder in it doesn't sound as good as Paris. Sure, it's only 16 bit, and only 8 tracks...

....but it really is impressively easy to use. Convenient. Obviously no good for any actual release stuff, but for mucking around, excellent, and for looping... ;o)

Well looping is just the best. It's not actually the best looper in the world

as such. Some features of dedicated loopers, like reverse for example, are absent. On the other hand you do get 8 tracks to loop on which isn't bad, and what I especially like is that it has track buttons like a proper recorder, so you can create 4 loops which play together, and then mute any one, or two, or whatever, and then bring those loops back later on if you like. This allows a lot of flexibility in terms of building a peice.

I especially like the way the thing works. With some peices of gear you just never get along with them and feel like it's a fight to get the job done, but others are intuitive and you find yourself agreeing with all the design decisions, and when you disagree, half an hour later you end up going "Ah, THAT's why they've done it that way!!". The GNX4 is one of the latter for me. How it's laid out makes sense to me. There's a lot to this box, and I reckon I've got a hold on about 3/4 of it or more already. That's not bad for two nights mucking about.

As far as the sounds go, I haven't plugged it in to Paris or anything yet to have a good listen, but so far the sounds have mostly impressed me. I've heard it said that the actual amp models on this box aren't entirely accurate, but that it's strength lies in the "WARP" feature, which allows you to make combinations of two seperate amp/cabinet setups. From what I've heard so far this does sound like a powerful tool. It does seem to be a true warp function, and some very effective results can be had by criss crossing between different cabinet models. I've heard there is a set of some 1000 odd presets you can now buy which utilise the warp feature, which I'm considering purchasing.

Even the virtual pickup settings seem to work quite well... humbucker to single coil and visa versa. I was expecting some cheap EQ effect, but whatever they've done sounds like it's much more effective.

I can't wait to hook it up to a keyboard and

I've stripped it down to mobo(no pci,video cards or ram)and cpu.
Still all I get on power up is lights and fans come on thats it.

I'm beginning to think its my mobo or cpu.I might still try a
new PS first.

Thanks,
Pete

My Digitech RP2000, a previous version of their amp modeler/FX pedal, is a real workhorse. It sounds good, is built solidly and has been very dependable for gigging with acoustic guitar, electric guitar and violin.

Cheers,

to get things started. It's the bios that's first of all is taking care of what shall be started up first with a computer and sending this information to the chipset and most of the things to start up or not you can automatic or manually set up in the bios. So, the first thing the bios need is power. If the power is OK, than the next is a healthy Graphic card and RAM. If that's OK too, it's a bad motherboard left. If you can't come into the bios at all with the delete button when starting up, the problem must be in one of those 4 things. You don't need a harddisk at all to start a PC, you can start it from a floppy too, with a startup disk in DOS mode if things are OK.

Don,

I would choose your edit point and place a marker there.

Select and cut all objects and automation data at this point.

Now cut and paste should work for everything except mutes

that cross that line. It has worked for me in the past. Surprisingly

simple if you don't forget where you are in the process.=20

>Hi,
When I am talking about Avalon I am NOT talking about 737 kind of preamps.
I am talking the solid state A class M5 (mono channell) and the AD2022.
These preamps are BIG sounding.
I have Great River ,9098, Telefunken V72, V77, Grace 101, Eureka (by the way
this sounds very very good if you change the 5534 opa's with AD797 !!), DBX
376/386 (these sound very sweet with Telefunken ECC82 tubes)
The M5 Avalon has the biggest sound of all...
It is extremely fast and aggressive sounding and it has the most "forward"
character" of all.
I encourage to rent the Avalon M5 or AD2022 , the Great River NV and FMR
Real nice preamps.
Regards,
Dimitrios
