Well I just read that the Cubase plugin is a SMPTE generator not a reader. From what I can tell ADAT sync (from Paris using XP?) or MTC are my only options.

I figured I'd end up with the RME HDSP 5692 card in the end.
Will Paris using XP be able to send ADAT sync to this card successfully?
I understand the Paris ADAT sync using XP doesn't work with an ADAT tape = machine
but will it work with the RME this way?

If so then I guess I have to buy that RME card now. Are there any other = cards tha

thanks. I agree about Norton. It's raped my system before, then I found
a little app that finds all the Norton entries and files and gets rid of
them, which sure saved some head aches.

some kinds of media playback.

If you insist on paying for an inferior Microsoft operating system, as an alternative to Norton I suggest AntiVir or Clamwin. AntiVir is free as in beer, Clamwin free as in beer and free as in speech (it's GPL'd). The downside is that Clamwin doesn't include a real time scanner--you have to tell it to scan something. I think the XP firewall is pretty decent, I use it on my machines but I also have my own firewall built into my home router. I think Zonealarm mostly just scares people.

-----060807020906070203050506--I'm curious, what do you mean by "Raped" your system.

I've never experienced
what other people are saying about Norton. That being said, I'm not trying
to defend it either. If there's something better, I would like to be using
it.

>>This is all just odd to me... reading the great jonesing on McAfee and the negative reference to Norton as "invasive." I've have always found McAffees stuff to be incredibly invasive and Norton (System works in particular) to be very background, make it do what you want and not what you don't. I recently got a call to fix 2 PC's... each had McCaffee and each was healed with the removal of McAfee. The other thing with McAfee versus any other AV/SystemHealth I've seen is the lack of configurability and the absolute BS it throws in your face that you can't turn off. McAfee has exhibited unwanted unwarranted paranoia about every little thing. Disbale it to install a new app and it turns itself back on to tell you that it believes your neighbor's cat may be using a dial-up connection to email Lex Luther's evil twin in an attempt to have your brother-in-law sent back to prison. Ignore that and it tell you that tomorrow, you're gonna have a wreck and kill 2 nuns and 6 baby ducks if you don't upgrade now. Whereas, Norton just does it job, doesn't fill every available space in your browser bars with marketing hype and your OS with flashing lights and sirens.

Hey guys & gal,
I am ready to update and wondered if I'll lose presets or functionality.
Tom

I choose Polesoft Lockspam to fight spam, and you?

-----=_NextPart_000_0010_01C68047.CFFE4A20--Just wondering.. were you using McAfee managed by chance? That thing is a giant pile of crap, and you'd be dead on to say you get to configure 'nothing' about it. Their A/V I'm ok with, and the firewall I don't like. Zone Alarm and AVG have never once failed me on my personal boxes. Corporate.. well, that's another thing I have to live in a box on. But Norton? Haven't had any kind of luck with it that is good. Nice to hear another POV though, I don't feel quite as trodden upon by Symantec :)

-----=_NextPart_000_0013_01C6803F.7841A1E0--Better, to me, means Grisoft. YMMV. I've been witness to the after effect of specifically written viruses going in and dismantling norton w/o norton knowing about it. Norton appears to be running properly / protecting, when in fact it ain't. That is the real bad news for the recipient. Think of it this way. There is a reason the big guys get put in the sights of every little hacker wanna be. They are dominant, they bring the most 'glory' to the little hacker that could. Same reason MS keeps (and believe me, Mac is going to follow on the hit list) getting pants'd... they're the *big guy* and a big target brings a lot of crosshairs on it's butt to the party. Grisoft, Trend Micro, maybe Panda all fit that big enough to get it done right but not so big they have a target painted on their heads.

Excellent. I finally purchased the Cambridge and the Pultec Pro.
Can't wait to use them on some mixes I'm doing these days.
What do you like using the Pultec Pro on? I love the EQP-1a
on bass, kick and a tom or two from time to time. I question
the crazy midrange that this Pro unit will offer. E. guitar perhaps?

Sent you a tidbit.

Tom

Tom , your midisport 8x8 is installed in your native rig along with =
Cubase SX rite? And you are doing the realtime processing with UAD-1 in =
your native rig from Paris with full delay compensation rite? Man, I =
might be able to do this with my existing setup.....!!!!

"Tom Bruhl" <arpeggio@comcast.net> wrote in message =
news:44754042@linux...

Major good just occurred for me with all of this MIDI and timecode=20
stuff. Thanks to Rick and DeeJ and a little fiddlin' and diddlin'
I have SMPTE sending to Cubase from Paris through the
MidiSport 8x8 and easily getting to all hardware and=20
softsynths together. This is a major hurdle. Now I don't
have to spring for the RME card until I spring for a super
duper Cubase/softsynth rig in the not too distant future.

The next hurdle is the sysex dilemma that the Motu was not
participating with. We shall see if the MidiSport is up to=20
the task. I read that Cubase is finicky with sysex too.
I hope Steinberg isn't the culprit. The Motu software was as
flakey as it gets though.

Thanks guys!

Tom

"DJ" <animix_spam-this-ahole_@animas.net> wrote in message =

Thanks for the call DeeJ. Thanks to you I know what I have to do =
now.

Spend more money.

Ha!

"DJ" <animix_spam-this-ahole_@animas.net> wrote in message =
news:44750590@linux...

Tom, answers below:

"Tom Bruhl" <arpeggio@comcast.net> wrote in message =

news:44750054\$1@linux...

Well I just read that the Cubase plugin is a SMPTE generator =
not a

reader. From what I can tell ADAT sync (from Paris using XP?)
or MTC are my only options.

I figured I'd end up with the RME HDSP 5692 card in the end.

Resistance is futile

Will Paris using XP be able to send ADAT sync to this card =
successfully?

Yes. always

I understand the Paris ADAT sync using XP doesn't work with an =
ADAT tape machine
but will it work with the RME this way?

Yes. It will work. I've personally done it with Paris on XP.=20

If so then I guess I have to buy that RME card now. Are there =
any other cards that=20
are better for this application?=20

Do you really need 24 ADAT I/O? The HDSP 9632 should work well =
for this. Also the HDSP PCI with a Multiface (v1) or Digiface breakout =
box will work. I have synced the Multiface (v1) to Paris with no =
problems. Multiface v2 doesn't have ADAT input so avoid that one.

I do need the MIDI, ADAT and MTC or ADAT sync anyway.
I didn't want to add a MIDI card to my Paris comp if it isn't =
necessary.

I am using the GenX WC now too.

If you decide on an HDSP 9632 and will need to use it as a =
standalone (not synced to Paris ADAT), you will need to buy the WC =
daughtercard for it.

Thanks,
Tom

Be usre that any RME interface you buy has the *HDSP* =
designation.....not the "Digi" designation. The "Digi" series is older =
and does not sync reliably to Paris ADAT.

Good luck,

Deej

"Tom Bruhl" <arpeggio@comcast.net> wrote in message =
news:4474ed25@linux...

I think there's some kind of plugin that needs to be added =
that

may not be stock with the program. I want to send SMPTE =
from

Paris to Cubase so they can lock.

Anyone here familiar with the procedure? The Steinberg =
forum isn't letting me

search but I think I read the answer there at one time in =
the past.

As always thanks for your help.

Tom

I choose Polesoft Lockspam to fight spam, and you?

></html>
>We use Symantec corporate where I work. It's not nearly as invasive as the
consumer versions. Remember I'm a professional geek, so for me control is
a _huge_ part of what I want from my computing environment, and consumer
Norton does spread itself all over the place. It inspects web pages viewed,
tries to scan network drives (big no no in a corporate environment), and
if you watch the taks manager it's always muddling around doing something.
It's also awfully chatty with the remote Symantec servers, which is understandable
(virus definition updates) but the precise thing I _would_ like to know about
is when a machine on my network is talking to another machine on the web.

```

Anti-virus software also creates its own single point of failure in the event that the antivirus software has a problem. As in

<http://www.eweek.com/article2/0,1895,1967941,00.asp>

200 million computers running Norton and they may ahve left a huge security hole in their own software. Monocultures are bad for software just like they're bad for nature.

In my experience the free tools are at least as good as the pay tools. They also offer a little security by obscurity improvement because they aren't as common as Norton. I still say, though, that good computing practices + GNU/Linux is the best way to avoid this stuff.

Rob,
I haven't tried any of that yet. My UAD is in my Paris rig.
I suppose the Cubase plugs and a few other VSTs would be a=20
place to start just to see if it works.
Tom

"Rob Arsenault" <info@studiomanitou.com> wrote in message =
news:4476f69e@linux...

Tom , your midisport 8x8 is installed in your native rig along with =
Cubase SX rite? And you are doing the realtime processing with UAD-1 in =
your native rig from Paris with full delay compensation rite? Man, I =
might be able to do this with my existing setup.....!!!!

"Tom Bruhl" <arpeggio@comcast.net> wrote in message =
news:44754042@linux...

Major good just occurred for me with all of this MIDI and timecode=20
stuff. Thanks to Rick and DeeJ and a little fiddlin' and diddlin'
I have SMPTE sending to Cubase from Paris through the
MidiSport 8x8 and easily getting to all hardware and=20
softsynths together. This is a major hurdle. Now I don't

have to spring for the RME card until I spring for a super duper Cubase/softsynth rig in the not too distant future.

The next hurdle is the sysex dilemma that the Motu was not participating with. We shall see if the MidiSport is up to=20 the task. I read that Cubase is finicky with sysex too. I hope Steinberg isn't the culprit. The Motu software was as flakey as it gets though.

Thanks guys!

Tom

"DJ" <animix_spam-this-ahole_@animas.net> wrote in message = news:44752b39@linux...

It never ends.

"Tom Bruhl" <arpeggio@comcast.net> wrote in message = news:4475210b@linux...

Thanks for the call DeeJ. Thanks to you I know what I have to = do now.

Spend more money.

Ha!

"DJ" <animix_spam-this-ahole_@animas.net> wrote in message = news:44750590@linux...

Tom, answers below:

"Tom Bruhl" <arpeggio@comcast.net> wrote in message = news:44750054\$1@linux...

Well I just read that the Cubase plugin is a SMPTE generator = not a

reader. From what I can tell ADAT sync (from Paris using = XP?)

or MTC are my only options.

I figured I'd end up with the RME HDSP 5692 card in the end.

Resistance is futile

Will Paris using XP be able to send ADAT sync to this card = successfully?

Yes. always

I understand the Paris ADAT sync using XP doesn't work with = an ADAT tape machine

but will it work with the RME this way?

Yes. It will work. I've personally done it with Paris on XP. =

If so then I guess I have to buy that RME card now. Are =
there any other cards that=20
are better for this application?=20

Do you really need 24 ADAT I/O? The HDSP 9632 should work =
well for this. Also the HDSP PCI with a Multiface (v1) or Digiface =
breakout box will work. I have synced the Multiface (v1) to Paris with =
no problems. Multiface v2 doesn't have ADAT input so avoid that one.

I do need the MIDI, ADAT and MTC or ADAT sync anyway.
I didn't want to add a MIDI card to my Paris comp if it =
isn't necessary.
I am using the GenX WC now too.

If you decide on an HDSP 9632 and will need to use it as a =
standalone (not synced to Paris ADAT), you will need to buy the WC =
daughtercard for it.

Thanks,
Tom

Be sure that any RME interface you buy has the *HDSP* =
designation.....not the "Digi" designation. The "Digi" series is older =
and does not sync reliably to Paris ADAT.

Good luck,

Deej

"Tom Bruhl" <arpeggio@comcast.net> wrote in message =
news:4474ed25@linux...

I think there's some kind of plugin that needs to be added =
that

may not be stock with the program. I want to send SMPTE =
from

Paris to Cubase so they can lock.

Anyone here familiar with the procedure? The Steinberg =
forum isn't letting me

search but I think I read the answer there at one time in =
the past.

As always thanks for your help.
Tom

I choose Polesoft Lockspam to fight spam, and you?

-----=_NextPart_000_00B8_01C680AB.A0C81D30--Thanks Aaron. I'll check out those options.
You use zone alarm at home, don't
you? I think that you turned me on to it, could be wrong though. Anyway, it
seems to do the job for me, but there's obviously some negative sentiment
about it.

>Hi all,

```

My peavey vmp-2 fell out of the rack onto its face and busted some switches and knobs. It also needs to be re-tubed with some high quality replacement stuff.

Is there anyone out there who can help me?

Thanks

ChuckMaN!!! Sorry to hear that Chuck.. Very nice Pre..LAMont

WOW!! Look at the thru-put on this baby.. This is going to change things
alot the DAW busines. I fthey can do 32 Gig flash, you know 80 , 120, 200
is right around the corner.I can but my tech and I live in Canada

Don

named Mike Brown--give him a call, he is a really good
friend to the steel guitar community, and gets things done.
You can mention me and the Steel Guitar Forum and he'll
get you to the right place. It's pretty refreshing to deal
with a company with good customer service like they have...

Do you have any experience with the Avalon U5 DI for recording bass? Just wondering how it compares to the Ampeg.

Cheers,

TCso tell me old guru of the deep blue...what'll bite on it?

>I'm using Norton here along with XSoftspy. Between these two, I'm good. I
wouldn't put it on an audio machine though. Works fine for me on an office
rig, but there is a small performance hit.....to be expected, IMO. The
only problems I've ever had with Norton was getting my head around a few
issues with Norton and networking, so I enlisted a young geek'ster to do it

for me so I could watch. I think I still remember and IIRC, it was easy.....(now WTF did he do?)

;o)

The second break, there is a bad lip sync on the drummer;) Second guitar solo/lead is a bit out of sync too. But hey, there sound fast!

>I'll be glad to tell you exactly what you need if you'll tell me what you want to achieve with how many tracks.....but a slower computer is going to limit you in many ways no matter what you want to achieve because even with UAD-1 cards, you're still processing through a native system and you've got to either:

1. be able to stream all your tracks directly from the native app to Paris while being processed in the native app. The higher the track count, the more CPU cycles the native app wioll use, and despite the hype, the UAD-1 will also cause a CPU hit.....just not as much as a *really hungry* native plugin.

2.or you've got to be able to use the native app as a standalone

processor in order to process the files sent from Paris *through* the native app and UAD-1 plugin and return them to Paris at 64k (1.5ms) buffers or the Cubase plugin delay compensation doesn't really work optimally. You might be able to get away with 128ms, but it can get sloppy and flammings can happen. For *live* zero latency processing, you're going to need to operate at 1.5ms latency in your native app.

My advice is to build the most powerful rig you can for this.

For hardware, I would recommend RME HDSP series cards, only because I have been using them and I know how to configure the system for what I need to do. I have configured my rig with 2 x HDSP 9652's and one HDSP Multiface because this combination give me exactly the number of analog and digital I/O I need to mix while interfaced with my Paris rig and certain digital processors. Dimitrios' solution of using Pulsar cards might be a more cost effective and perhaps less CPU intensive solution.

I'm running an AMD 64 4200 x 2 dualcore CPU right now. I don't think it will be long until I go to a 4800 x 2. We'll see.

Regards,

Deej

This is what I'm saying

Paul ReiserHey DJ, are you running SX V3? Will SX V2 work also to do ADC?

```

>If the Mac is a nubus, you can sell the Nuverb together with the Mac for a
good price on EBay. I've seen a working Nuverb setup go for $400.00-$600.00,
though it's been a while. The Nuverb is, I think, basically equivalent to a
Lexicon 300 and can be patched in to a board as a standalone processor.

>Hi John,

The Ampeg preamp came in today. It's got some nice (and startlingly obvious) tone shaping possibilities that are very specific to bass. One question.....when I crank the master knob, you'd think I would hear a difference in output volume, but nothing is happening. Could be that I've got a defective unit.. I'm running the balanced output direct to a Paris A/D converter. Cranking the volume knob completely clockwise gets me to around -10dB on the Paris meter.

It sounds nice, but to be quite honest, I'm using a stock PBass (passive pickups) and A/B'ing it with an Avalon 737 and a Presonus ADL 600 and those two preamps are kicking it's ass most seriously in every way. The ADL is an absolute monster as a bass DI, even though it doesn't have an EQ. Every nuance of the finger touching the string, touching the fret, pulling off the fret is so friggin articulated with this preamp that it's absolutely sick. This preamp actually picks up my thought patterns, converts them to audio

and I hear them through the Paris converters as I'm deciding where to fret next.

Anyway, like I said, maybe I've got a defective Ampeg.

Cheers,

Deej

thanks

DCHey all,

I am discovering some *amazing* stuff trying a multiband
split/compressor in Paris. THANK YOU to Sakis and DeeJ for the
help with this.

More to follow, but I am getting results, on very familiar material that are just making me grin from ear to ear...

As soon as I get this live disc out the door I will post the details.

Paris lives!

DCOh hey, I thought it was hilarious. But you have to respect their discipline and dedication to their instruments.

The problem is that it is really hard to write good music that shows off this level of skill. I mean Yngwie has already done the Pagannini thing, right? It quickly leaves the realm of art and literature that great music inhabits and becomes, well, wanking.

I do prefer a good wank to death-obsessed horsesh*t I must admit...

DC

>Deej.. it's typical for the master to only run the amp / amp output.. since
you're into the DI out this is probably a normal operating procedure. That
keeps the player from jacking gain on the soundman in a live situation when
playing volume war with the gtr player. There are some exceptions (SWR model
400 is one) that don't stick to this ruling, but I bet the Ampeg is on the
'standard'.

Try hitting a DI from the *to the amp* output and I bet the master works.

I choose Polesoft Lockspam to fight spam, and you?

<http://www.polesoft.com/refer.html>OK then.. thanks. I'll probably RTFM tonight. This thing has some very

interesting tone shaping properties. I'm liking what it's doing but it really needs to be used with either active pickups or, if used with passive pickups, to be output to another device with additional gain staging (like a compressor as John suggested) in order to achieve optimal recording levels. When I first opened it up, I thought "o'gawd.....another tweakhead box. It's gonna' take me forever to dial in anything usable". Wrong. It's very easy to snag your basic sound and then contour it to taste. I've got a Demeter "H" series opto preamp that is starting to look like it's gonna end up being the Ampeg's bitch. What I have achieved so far with this is a very coloured sound, but so is my B15-N and I like that color just fine.

;o)

>Well, FWIW, I ended up picking up a SansampBass & ran the signal out through my reamp box (it's the one made by Radial), and did both... Sansamp-ed the track, then reamped it as well... it's MUCH, much better, though still not what I'd consider "killer", it'll definitely work, though. The Sansamp gave it some presence & wooliness that it was lacking, and the reamped track gave it presence and better articulation/clarity, using a Mesa head on the cleanest setting, and running it through a guitar cab with some really tight speakers, then micing it with a TLM-103 through a Neve Portico I also recently snagged. I think it'll all work out fine with a blend of those two tracks.

Also tried the new Portico on a soft vocal track with a Claytor Special (the Royer-modded MXL)... jury's still out on that, though - took me about two seconds to yank it & put the mic back through the Chandler TG2 - the Chandler kicked it's ass. Was not really impressed with the Portico for that application. Hard vox tomorrow - we'll see how it does up against the ISA 428, which is what we've been using for the harder-edged stuff on this project.

-----=_NextPart_000_002B_01C6813D.B3020500--Keep us posted on the Portico. I've been
 lusting after one of those, but
 tonight I took the plunge, stuck some rubber feet on the module below it so
 I wouldn't scratch it and actually inserted the ADL 600 in the top of my
 rack where it can't get scratched top or bottom and it will be stable riding
 the rubber feet on top of the other module without using rack screws. Morgan
 has been kind enough to allow me to demo it for a while and now I'm getting
 blown away by it more and more each day.. Using this exhalted top rack
 position means three things.....

1. It needs (and gets) plenty of ventilation (this is a slant rack so the
 top of any module in this rack is angled downward, nothing covers the top of
 the module and therefore it has lots of air above it for ventilation..
2. I'm now gonna be patching it into my bay.
3. I'm gonna figure out a way to pay for it.

It ain't cheap, but I'm finding it so useful that I think it's going to be
 it's worth every penny. This thing sounds big and expensive, like my Great
 River MP2-MH sounds big and expensive, though obviously in two different
 ways.

Damned impressive piece of work.

;o)

http://youtube.com/watch?v=QW_6iwi1Zs0&search=erwin%20musper

Our first hitsingle in the Netherlands when we still had hair.

The guy on Fender rhodes is Erwin Musper who nowadays owns a studio in Cincinnati.

<http://www.studiothebambooroom.com/>

Shortly I came back in contact with him and we decided to do some new stuff

on

which I'm working now. I guess some relationships never end, no matter the distance.

Greetings,

AbOh, the guy on LV and drums well...that's me.

>AbDJ,

The SVPCL page 7 of the manual has a schematic and the Transformer Balanced Line Out is PRE Master and so Master has no effect. The two PreAmp outs are Post Master though. Also I'm running an Ibanez attack bass with ACTIVE electronics so that helps I'm sure. I also read that there is a chip replacement for more gain. E

ven with the active electronics I'm right on the edge of having enough gain but the tone is totally where I want it. Now I'm not saying the \$2000 preamps won't sound better but that's a whole nother price range and the Sansamp is a lower priced unit too, but for me this box totally gets me the sound I need for rock and roll and jazz. I'll investigate the chip mode to get more output. I also don't remember if I set the Paris Patchbay to -10db or +4. I'm betting I have it on -10db. I'm using the Preouts though and I'll try the Balanced Out next. For me there is no comparison with a sansamp though. For me the sansamp is very uneven in response, very low on output and really bad tone compared to the SVPCL.

John

very

[illegible]

For the first time using the Sansamp, I didn't find it to be necessarily uneven in response - I think it interprets dynamics more "dynamically" than, let's say, a straight-ahead direct box, or perhaps the Ampeg you're referring to, but in this case, that seemed to be a big benefit. I used it with the blend setting set all the way on the processed side (figuring if I wanted any of the original sound, I could just bring up the original track), so I'm sure that makes some kind of difference, as well. Add just a little drive to bring in some constant distortion to mask the intermittent distortion that the Carvin head imparted, and we've now got a completely useable metal bass track. If the guy's up to re-doing these parts, I'd still like to seem him do that, just for the sake of trying to get it to a higher level of quality. Once I played the re-amped-sansamped tracks for a couple of the guys last night, their opinion of the original track changed dramatically... It went from "yeah that's cool, we like that sound, no don't change it" to: "Yeah, I see what you're saying" when I pointed out that even though this was better, I felt we could get better still if we re-did them through something other than the line-out on that particular bass head.

Anyway, as far as gain goes, there was plenty, and in fact I had the level on the Sansamp set at maybe an "8" out of "10" to avoid clipping the inputs - but then I was running out of a line-level signal & dropping it down to instrument level through the reamp box, so again, I'm sure that makes a difference, too. So, I found it to be a pretty useful little tool for this purpose, and my local Guitar Center drone gave me a pretty good deal on it (\$160, plus an a/c adaptor for another five bucks), so that doesn't hurt, either. Is it better than your Ampeg thingy? I doubt it, just on principle LOL but for what I needed on these tracks, it seems to have worked.

>Keep us posted on the Portico. I've been lusting after one of

>those

I will... I may play around with it some more today before the band gets here, if have time after running my usual spate of Saturday errands. One of the things slotted for this afternoon is some harmony tracks one one song that the singer's not sure about intervals & such, so I'm going to have to guide him through those & in preparation I may throw down some scratch

harmonies (although they won't be very "scratch", they'll have to be pretty much right on) for him to reference... If I do have time, I'll use the Portico for these to see how it comes across with a different mic - it sure didn't compliment the Claytor-67, that's for sure.

This project is turning out to be a challenge in terms of vocal tone, because the guy wants a thick sort of character to his voice, but he rejects the thicker/warmer-sounding signal chains... when we were auditioning mics & pres, the warmest/thickest-sounding combinations utilized either the Claytor-67 or my modded M-147 with the k-67 capsule through either the Avalon 737 or the Chandler TG2... both mics have a lot of warmth, for sure, but the modded-147 has more high end & air, and the Chandler pre has more of than than does the Avalon. IMO the Kiwi through either of those pres worked really well for his voice... it was pretty thick, with less "air" than those two mics, but the combination he went for was a TLM-103 through the ISA 428 for the harder-edged stuff (he did like the Claytor/Chandler combo for the softer parts, so that's what we've been using there). Now, the -103 through the 428 - that's a pretty clean combination with very little coloration, and the reason he liked that is that it emphasized the breakup/rasp in his voice, but it is NOT what I'd consider a really thick-sounding signal chain. I'm also running the hard-edged takes through a Distressor in "British Mode" on it's way to track.

So I figured we'll be doubling a lot, in order to thicken things up, and he actually doubles his parts really well... in fact, he takes quite a bit of time & is willing to do a bazillion re-takes if necessary in order to get his main track sounding right, but once that's done, he can usually double it REALLY tightly & on-pitch in one take with maybe a couple of punches at the most.

Here's the interesting part... the guy wants his voice to sound like Jonathan Davis (of Korn), specifically he's looking for something like the chorus parts of their song "Coming Undone"... note that he tells me this AFTER we've done the majority of the vocals on two of the three songs, and some of the vox on the 3rd song, and are wrapping up for one evening's worth of work. Keep in mind we've discussed the vocal tone he wants quite at length, and this is the first time he mentions a specific example. So I ask him do they have a CD of it, and one of the guys has it on his iPod, so I listen to it, and yeah, it's got a nice thickness to it, but it also has a really nice bit of high-end air....hmmmmm... sounds like one or two of the signal chains this guy rejected earlier. lol

It's also doubled & tripled & has a metric buttload of processing on it, but apart from that, I think we would've nailed it on this guys voice with the Avalon & either the Claytor-67 or the Modded-147.

So I get online & try to find out who produced and/or engineered it, and the engineer was Frank Filipetti, so I google his name together with Korn & "mic" & "vocal" & "preamp" - all the usual stuff - and I find an interview where he said for lead vox they usually use a Sanken CU-44x; shit, that's a \$2,300 mic - I can't be buying one of THOSE just for this project, but it's also not a tube mic.... hmmm..... it also said they used a Tube-Tech MP1A mic pre and a Neve 1173 for EQ going to track, and an 1176 for compression.

So with several non-tube LDC's to choose from here (although every voice is different, and I think one of my tube mics would've gotten this particular guy closer), and with a tube preamp that also has EQ going to track (the 737), and with a VERY versatile compressor in the Distressor, I think there's a pretty good chance that after some dicking around with various settings, we could've gotten this guy right in the ballpark going to track - despite not having the exact same signal chain, having some similar elements therein can often get you close - if he had just mentioned this specific Korn track or specific vocal tone earlier. ARRRGH! Now it's going to be a matter of having to try to get there with plugin's.

NeilHi,

Chuck and other Parisians.

The distortion I get when using evetiter , you know some crackling in the sound is this ever fixed ?

I have serached the forum and this has been brought up by others too.

Chuck was kind enough to try to fix it...

Evetiter sounds so fine !!!, I would love to know that this is fixed somehow...

Regards,

Dimitrios>they usually use a Sanken CU-44x; shit, that's a \$2,300 mic - I can't be buying one of THOSE just for this project, but it's also not a tube mic.... hmmm..... it also said they used a Tube-Tech MP1A mic pre and a Neve 1173 for EQ going to track, and an 1176 for compression.<

You just need to go out and buy this stuff immediately and quit dickin' with workarounds man. What's wrong with you dude????

;oP

Seriously though, thanksfor the rundown on what you're doing and trying to

accomplish. Your following comment.....

:he tells me this AFTER we've done the majority of the

Eventually, the sample offset can become noticable and also, if you decide it's not working for any reason, you have to undo all of this "per track". It was easy (at least for me) to be working late on a mix and forget to undo one or two of the nudges. Forgetting this numerous times will eventually throw the relative sample accuracy of the tracks off and you enter "flam mode". It's not a *huge deal because you can always realign the tracks with a guide track in the editor that is not being processed, but it's time consuming so being very careful when removing UAD-1 plugins is in order here.

Cheers,

Deej

Could you post (probably for the umpteenth time!) your setup that allows for real time processing of VST FX using Paris? Am I correct in understanding that you're running UAD-1 FX w/ no latency while mixing in Paris? Could I run the Waves IR reverb in real time w/ Paris this way?

Thanks!

>I want to build some WC cables of equal length. Thje intital run from my
master clock to the distro module is 4 meters so the remaining 9 cables I
need to build (8 more WC cables and one AES cable) will need to be 4 meters
also. I can't afford the premade Zoalla or Apogee stuff. I'm looking for raw
75 ohm (and 110 ohm) cable of the highest quality I can afford with the best
connectors I can afford. I don't want my square waves even thinking about
turning into triangle waves due to high capacitance.

I know Canare is good stuff. I have some 110 ohm Mogami here. What would
youse guys suggest for the lowest capacitance?

Thanks,

DeejHi,

Pulsar as I posted before is an exceptional dsp system.

Except f

or the best synths around (Moogs, Prophets, etc) it is a hell of a
PROCESSING ENVIRONMENT

Now a new company has produced new plugz for these beasts.

Hold your breath

SSL9000

Neve1084

Pultec

API 550

RMX-16 (AMS reverb !!!)

and an exceptional mastering dynamic EQ that hard to believe what it can
do to your mixes.

Only pros could have access to beats like these !

Also BSS dynamic 4 channel eq/dynamics emulator also announced.

Still with me ?

WHAT IS THE MOST INTERESTING THE PRICES WILL BE LOW BALLERS !!

Imagine something around 60-70 \$ each main plugin and a bundle with get them
all like 500 \$ or something, prices yet to be announced.

I have tried most plugins out there , believe me these new ones are dream
come true for me...

Note that already there is Vinco (1176 comp emulation).

Tons of free ones.

I would not scream so loud so many times but PaRIS users with adat in/outs
are "obliged" to take this route.

Ok UAD1 are already there but a Pulsar card with 6 dsps and all main plugins
cost used around 400-500-600 \$

So with normal classic option you will have 16 adat ins and outs plus a spdif
in and out plus 2 analog 24/96 in and out plus two (32) midi ins/outs

Now consider the above new plugins buy addon and for around 1000 \$-1100\$
you will have a tremendous resource of fantastic sounding plugins.

If you here their pultec or NEve 1084 eq you will stop using the nice Paris
eq...

Well you would need at least one mec and one adat card or best two mecs two
adat cards , or one mec two adat cards under Me (win98)

Now if you would want to add more adat ins/outs to your system like DJ wants
(me too) you can buy another two Pulsar cards (your plugins are already bought)
which leads to another 1000 \$ to have full three pulsar cards with 18 dsp

chips !!! and be happy as I am...

well there is the "Kingsize" option.

there are also super Pulsar cards out there each having 15 dsp chips !!!

In outs are the sam

Il need to buy an appropriate crimp tool to attach the ends. Proper 75Ohm ends can not be soldered... only crimped. I have some 25' runs of this feeding the Paris and Nuendo computers, and several other devices with no trouble. The DA202 is a really nice 110 Ohm AES cable that fits well into XLR plugs. Note... use Switchcraft XLR connectors for AES signals... the standard Neutrik plugs mess with the impedance somewhat.

David.

I choose Polesoft Lockspam to fight spam, and you?
<http://www.polesoft.com/refer.html> I forgot to mention that since I'm a Mac guy I'd probably try to
do this using
PT LE or Digital Performer. I have a Digi 002 and a MOTU 2408, but I think
the 2408 w/ the PCI 324 card introduces some latency.

[View Forum Message](#) <> [Reply to Message](#)

his channel.

Then on the Cubase Group channel that is sending to the Paris aux, the input will be the ADAT input that is connected to the Paris aux out. The output will be the external effect. Then on the Cubase external effect channel, the output will be the same RME ADAT output that is sending to the Paris ADAT channel sending to the Paris aux.

8. To route a VST effect in Cubase through a Paris aux, in the Cubase project window go to the FX channel and insert the effect you chose in Add/FX on this channel and then choose the same output bus for this channel that you chose for the Group Channel so that this effect goes to the Paris aux

9. On the mono or stereo track in Cubase insert this effect as a send effect.

10. Make sure the channel faders for the audio channel, the FX channel and the Group channel are set to unity.

11. Start playback and make the necessary adjustments in the send levels on the Cubase audio channel and the Paris aux channel.

In order use a hardware processor across submixes in Paris.....

1. Physically patch a pair the I/O of the hardware interface with the I/O of an audio interface you are using with Cubase.

2. In Cubase > VST connections> create an external effect and assign the I/O of the audio device that you are using with Cubase SX

3. In Cubase > VST connections>Group/FX>Add/FX and choose the external effect that you created.

4. If you want centerpanned mono or stereo, at this point you can just use this as a send effect on a mono or stereo audio track or for pannable auxes in Paris, you can follow steps 5 through 9 above.

Here's my routing matrix. Believe it or not, I understand it:

EXTERNAL FX:

1. MULTIFACE analog 1 (mono)
2. MULTIFACE analog 2 (mono)
3. MULTIFACE analog 3 (mono)
4. MULTIFACE analog 4 (mono)
5. MULTIFACE analog 5 (mono)
6. MULTIFACE analog 6 (mono)
7. MULTIFACE analog 7 (mono)
8. MULTIFACE analog 8 (mono)
9. HDSP 1 SPDIF 25 (mono)
10. HDSP 1 SPDIF 26 (mono)
11. HDSP SPDIF 51 & 52 (stereo)
12. HDSP 1 25 & 26 (stereo)

HDSP 1 SPDIF I/O 25 & 26 ASSIGNED TO EXTERNAL FX-EITHER INSERT OR SEND FX
HDSP 2 SPDIF I/O 51 & 52 ASSIGNED TO EXTERNAL FX-PATCHED TO QUANTEC AS SEND FX

Routing matrix:

PARIS SUBMIX 1 CHANNELS 1 THRU 8 / HDSP #1 ADAT 1

Mono-Cubase CH 1>RME 1 ADAT 1-1 out > Paris CH 1
Mono 2-Cubase CH 2>RME 1 ADAT 1-2 out > Paris CH 2

 >Gantt,

I had a brain fart and forgot which tread this request came from so I posted it as a new thread. You should definitely be able to run the Waves IR this way if your Mac has the horsepower to operate at 1.5ms latency while streaming processed signals live.

It's been so long since I've used DP or PT, that I don't remember exactly
how this would be set up on those apps, but it couldn't be too different as
long as you can insert external FX in those apps.

Good luck,

Deej

Make sure both systems are using a common clock.

In the Control Panel of your native audio interface , set the latency to 1.5ms.

Physically patch the Cubase ADAT I/O to the ADAT I/O of the audio device you are using with Cubase SX. Check the control panel of you audio hardware and make sure the I/O are sync'ed up.

Set up a matrix in the Paris patchbay where you are sen

> >
> >John,

I've decided to return the Ampeg. It's not because I don't like it. I

actually think it's an amazing tool and I appreciate your turning me on to it. In my particular situation it is redundant as I can dial in similar sounding bass sounds with my old trusty 737. The 737 has been my *go to* bass DI for a while. Considering the price of the Ampeg, it's amazing that it can stand relatively toe-to-toe with the much more expensive 737 on bass. In my situation, it's just sorta' redundant. If I didn't have the 737 already, I'd be all over this Ampeg box.

Cheers,

Deej

-----=_NextPart_000_00F2_01C68186.7CCDCA20--I'm in the middle of a discussion on another forum about defragging HD's and therefore destroying the interleaving of simultaneously recorded audio files. Someone whose opinion I trust/respect just posted the following:

"If you use NTFS, the fragments will happen contiguously enough that eventually the filesystem will recognize all the deleted files as a freespace region and reallocate it."

This would be a big case for NTFS formatting (ie using Paris on Win XP) if you were tracking large sessions and at the same time, deleting bad takes along the way (therefore fragging the hell out of a drive while at the same time recording interleaved audio files).

All of my drives on both DAWs are FAT formatted and I'm not having any streaming problems, but it's interesting all the same.

DeejThis is a multi-part message in MIME format.

Dimitrios,
Scope pro looks quite impressive! I have a few questions.
I am on the brink of investing in a killer Cubase rig (dual cores etc.) =
which will
probably include an RME card for 16 channels of ADAT and Midi in/out.

OR

Can I continue to use Cubase SX with a Pulsar Pro card in the same box and eliminate the RME card?

If so will this buy me the software power to run Pulsar plugins in =
Cubase (internally)
and route in/out to Paris via ADAT in sync? =20

Process Paris tracks with plugins in realtime while sending softsynths = to Paris also?

Can I still use Cubase's MIDI to it's fullest including it's softsynths =
and return everything to
Paris? =20

Latency equaling 1.5ms for Pulsar softsynths and 0 for Pulsar plugins =
right? Close to the same=20
for Cubase and it's third party softsynths?

Do I need to run Pulsar software mixers or can I call it's plugins and =
softsynths up
directly in Cubase? Probably have to use Pulsars patchbay to get to =
Cubase right?

One Pro card would allow about how many voices of softsynths. =20
How about a few nice reverbs and 2 or three nice comps with that?

Any crazy workarounds to make this proposed system with Pulsar work =
(like DJs w/RME)?

What do you use for sequencing?

Is Creamware a company that'll be around for a while? Are they as large =
as Steinberg or RME?
I'm worried about the EMU syndrome here.

A close friend of mine is employed here in Massachusetts by Analog =
Devices in R&D.
He speaks very highly of the Sharc chips.

You can probably tell I don't want to learn another mixer/software =
program. I'd prefer
Pulsar to interact with Cubase like a UAD-1 card with softsynths. =
Pulsars' hardware
looks tough to beat for the cost.=20

I'm seriously interested and also wondering about the used market for =
Pulsar hardware.
Thanks for this post and I'll be paying very close attention for your =
response.

"Dimitrios" <musurgio@otenet.gr> wrote in message =
news:44788b63\$1@linux...

Hi,
Pulsar as I posted before is an exceptional dsp system.
Except for the best synths around (Moogs, Prophets, etc) it is a hell of =
a
PROCESSING ENVIRONEMENT
Now a new company has produced new plugz for these beasts.

Hold your breath=20
SSL9000
Neve1084
Pultec
API 550
RMX-16 (AMS reverb !!!)
and an exceptional mastering dynamic EQ that hard to believe what it =
can
do to your mixes.
Only pros could have access to beats like these !

Also BSS dynamic 4 channel eq/dynamics emulator also announced.
Still with me ?

WHAT IS THE MOST INTERESTING THE PRICES WILL BE LOW BALLERS !!
Imagine something around 60-70 \$ each main plugin and a bundle with =
get them
all like 500 \$ or something,prices yet to be announced.

I have tried most plugins out there , believe me these new ones are =
dream
come true for me...

Note that already there is Vinco (1176 comp emulation).

Tons of free ones.

I would not scream so loud so many times but PaRIS users with adat =
in/outs
are "oblidged" to take this route.
Ok UAD1 are already there but a Pulsar card with 6 dsps and all main =
plugins
cost used around 400-500-600 \$
So with normal classic option you will have 16 adat ins and outs plus =
a spdif
in and out plus 2 analog 24/96 in and out plus two (32) midi ins/outs

Now consider the above new plugins buy addon and for around 1000 =
\$-1100\$
you will have a tremendous resource of fantastic sounding plugins.
If you here their pultec or NEve 1084 eq you will stop using the nice =
Paris
eq...

Well you would need at least one mec and one adat card or best two =
mecs two
adat cards , or one mec two adat cards under Me (win98)

Now if you would want to add more adat ins/outs to your system like DJ = wants
(me too) you can buy another two Pulsar cards (your plugins are = already bought)
which leads to another 1000 \$ to have full three pulsar cards with 18 = dsp
chips !!! and be happy as I am...

well there is the "Kingsize" option.
there are also super Pulsar cards out there each having 15 dsp chips = !!!
In outs are the same, each card can be bought for around = 900\$-1000-1100\$
used and with three cards you can have 45 dsps !!!!!!!
Ok back to reality...

One Pulsar card with 6 dsps is adequate for mixing a song and using = some
great plugins as I mentioned.
The same card can be configured for a synth recording platforma...

I am happy to say more if I see anyone interested...

Regards,
Dimitrios

I believe that all of this sync stuff is good to go between Paris and =
the=20

Pulsar.</DIV>

<DIV> </DIV>

<DIV>You could still run delay compensated =
UAD-1 plugins=20

at 1.5ms in Cubase SX with this, plus you would have the benefit of a =
DSP based=20

native system and all of the goodies that Dimitrios is describing. My =
next DAW=20

may just be one of these Creamware based systems. I'd have to buy the =
components=20

and build it and burn it in before porting everything over to it though =
because=20

I've gotta keep my current system up and ruining until the last =
possible minute=20

[illegible]

<DIV>and eliminate the RME =
card?</DIV>
<DIV> </DIV>
<DIV>If so will this buy me the software =
power to run=20
Pulsar plugins in Cubase (internally)</DIV>
<DIV>and route in/out to Paris via ADAT in =
sync? </DIV>
<DIV> </DIV>
<DIV>Process Paris tracks with plugins in =
realtime=20
while sending softsynths to Paris also?</DIV>
<DIV> </DIV>
<DIV>Can I still use Cubase's MIDI =
to it's=20
fullest including it's softsynths and return everything =
to</DIV>
<DIV>Paris? </DIV>
<DIV> </DIV>
<DIV>Latency equaling 1.5ms for Pulsar =
softsynths and=20
0 for Pulsar plugins right? </DIV>
<DIV>for Cubase and it's third party=20
softsynths?</DIV>
<DIV> </DIV>
<DIV>Do I need to run Pulsar software =
mixers or can I=20
call it's plugins and softsynths up</DIV>
<DIV>directly in Cubase? </DIV>
have to use=20
Pulsars patchbay to get to Cubase right?</DIV>
<DIV> </DIV>
<DIV>One Pro card would allow about how =
many voices of=20
softsynths. </DIV>
<DIV>How about a few nice reverbs and 2 or =
three nice=20
comps with that?</DIV>
<DIV> </DIV>
<DIV>Any crazy workarounds to make this =
proposed=20
system with Pulsar work (like DJs w/RME)?</DIV>
<DIV> </DIV>
<DIV>What do you use for =
sequencing?</DIV>
<DIV> </DIV>
<DIV>Is Creamware a company that'll be =

around for a=20
while? Are they as large as Steinberg or =
RME?</DIV>
<DIV>I'm worried about the EMU syndrome=20
here.</DIV>
<DIV> </DIV>
<DIV>
<DIV> </DIV>
<DIV>A close friend of mine is employed =
here in=20
Massachusetts by Analog Devices in R&D.</DIV>
<DIV>He speaks very highly of the Sharc=20
chips.</DIV>
<DIV> </DIV></DIV>
<DIV>You can probably tell I don't want to =
learn=20
another mixer/software program. I'd prefer</DIV>
<DIV>Pulsar to interact with Cubase like =
a UAD-1=20
card with softsynths. Pulsars' hardware</DIV>
<DIV>looks tough to beat for the=20
cost. </DIV>
<DIV> </DIV>
<DIV>I'm seriously interested and also =
wondering about=20
the used market for Pulsar hardware.</DIV>
<DIV>Thanks for this post and I'll be =
paying very=20
close attention for your response.</DIV>
<DIV>Tom </DIV>

Hi,<=
BR>Pulsar=20
as I posted before is an exceptional dsp system.
Except for the =
best=20
synths around (Moogs,Prophets,etc) it is a hell of a
PROCESSING=20
ENVIRONEMENT
Now a new company has produced new plugz for these=20
beasts.
Hold your breath
SSL9000
Neve1084
Pultec
API =

550
RMX-16 (AMS reverb !!!)
and an exceptional mastering =

dynamic EQ=20

that hard to believe what it can
do to your mixes.
Only pros =
could=20

have access to beats like these !

Also BSS dynamic 4 channel=20
eq/dynamics emulator also announced.
Still with me =
?

wHAT IS=20

THE MOST INTERESTING THE PRICES WILL BE LOW BALLERS !!
Imagine =
something=20

around 60-70 \$ each main plugin and a bundle with get them
all =
like 500 \$=20

or something,prices yet to be anounced.

I have tried most =
plugins out=20

there , believe me these new ones are dream
come true for=20
me...

Note that already there is Vinco (1176 comp=20
emulation).

Tons of free ones.

I would not scream so =
loud so=20

many times but PaRIS users with adat in/outs
are "oblidged" to =
take this=20

route.
Ok UAD1 are already there but a Pulsar card with 6 dsps =
and all=20

main plugins
cost used around 400-500-600 \$
So with normal =
classic=20

option you will have 16 adat ins and outs plus a spdif
in and out =
plus 2=20

analog 24/96 in and out plus two (32) midi ins/outs

Now =
consider the=20

above new plugins buy addon and for around 1000 \$-1100\$
you will =
have a=20

tremendous resource of fantastic sounding plugins.
If you here =
their=20

pultec or NEve 1084 eq you will stop using the nice=20

Paris
eq...

Well you would need at least one mec and one =
adat card=20

or best two mecs two
adat cards , or one mec two adat cards under =
Me=20

(win98)

Now if you would want to add more adat ins/outs to =
your=20

system like DJ wants
(me too) you can buy another two Pulsar =
cards (your=20

plugins are already bought)
which leads to another 1000 \$ to have =
full=20

three pulsar cards with 18 dsp
chips !!! and be happy as I=20
am...

well there is the "Kingsize" option.
there are also =
super=20

Pulsar cards out there each having 15 dsp chips !!!
In outs are =
the same,=20

each card can be bought for around 900\$-1000-1100\$
used and with =
three=20

>I did a review of the Creamware hardware synth thing, I forgot the name. The synths were quite simply superb. Their Prophet emulation was outlandishly good, and I have a Prophet-10 to use as comparison. John Bowen (who was a huge part of the entire Sequential line, from the Prophet-5 to the VS, and then the wavestation line at Korg) also develops synths for the Pulsar. Effects were also very good. I'd still be concerned about the stability of the company, driver updates for 64 bit operating systems, and so on. Also, there are the inherent limitations of all dedicated DSP sytems. But in terms of sonic qauality I think Creamware is up there with the best.

ding and returning
whatever tracks you want to process via ADAT on the insert module.

Set insert on the Paris mixer channel to external.

In Cubase, create a corresponding number of audio tracks.

In Cubase > VST connections>create mono input and output busses that correspond to the ADAT I/O of your audio interface that is connected to the Paris ADAT I/O

Insert the VST processor you want to use on the audio track in Cubase

Click on the little "speaker" icon on the Cubase audio channel so you are monitoring with effects.

Hit the Play button on Paris. The audio will be processed in Cubase Sx and returned to Paris.

The plugin delay compensation works very well at 1.5ms under this scenario,

allowing you to play back tracks in Paris that aren't being processed in Cubase with tracks that are.

Watch your channel levels in Paris. In an insert send/return scenario, a hot track being sent from Paris can clip the bejeezus out of a UAD-1 plugin in Cubase SX so be careful.

There is another scenario which I use in which I import all of the tracks into Cubase SX and then just return them to Paris while being processed on both systems. This takes more time to set up, but if you enjoy the Cubase editing capabilities, this is the way to go.

Mono and stereo VST effects in Cubase FX on Paris auxes

1. Physically patch a pair the I/O of the audio interface you are using wit

I choose Polesoft Lockspam to fight spam, and you?

<http://www.polesoft.com/refer.html>Ok, here's the short version. I've been working on this most of

the
day and am about to turn in, so this is very incomplete.

It is a version of Sakis' band-split technique where you use 4 stereo bands and 8 channels and 8 compressors.

I'm going to skip over a million details and just say that the secret is bouncing each stereo freq band with EQ only and then the next set etc until all are done. Then you bring the bands back to the editor, shut off the EQ and start working on your comp settings. (yes you have to do 4 passes to just create the files to do this!)

It is complicated, time-consuming, and a general PITA.

HOWEVER, if you pay attention and are patient, the results are friggin' fabulous.

Sweet, huge and detailed. Just amazing really.

There is much more to say. Later. BTW, you must leave some headroom in your mixes to get the most out of this (but the mastering guys have been saying that for years). This technique works so beautifully with slamming the Paris mix buss that it seems like it was designed to do this. Somewhere SSC is grinning...

Paris for mastering. wadda concept.
