producing this stuff. You'll make a pile of cash. Second, this is obviously
really shit software written by someone who knows jack about hip hop since
you can't even pick Bentley as the car.

My Xmas present to myself? Traktor Scratch. I'm probably going to take over
Saturday nights at a local lounge/bar where I'll be doing dub, dancehall,
reggae and just a teensy bit of hip hop. My first weekly music gig in nearly
ten years, but I have lots of practicing to do. At some point I hope to fold
a second laptop running Live for live dubbing/mixing, but I'm going to try
to start simple.

Just open a command window (Start => Run type 'cmd' then enter), navigate the folder (cd c:\folder\wherepicturesare and use 'rename.

rename *.* *.jpg

of if they have the wrong extension, .jpeg then

rename *.jpeg *.jpg

Thanks for the correction -I could have sworn I saw some sort of "reader/generator"
thingy in the Mac version of Reaper.
When I run a smpte signal from Paris, Paris is the master. I load up Brian's
smpte track in track 16 in Paris, route the track to external, make some
patches in the bay, route the output to the sync input on my Unitor and Bob's
your uncle.
MR

so any assistance or knowledge would be good.

In particular he is looking at some piezo mics for the triggers. We're wondering
what the capacitance spec should be and what relevance it has.

I've never paid attention to piezo stuff and don't see the relevance of the
capacitance figure, and what might be good or bad for a given application...

....but any advice on how to hook up a piezo as a drum trigger would be just

grand. :o) His drum brain seems to have most of the circuitry though, so I think we just need the piezo and lead and we're right... hopefully. :o)

Cheers,

Kim.A cymbal would be a terrible trigger, as they will resonate a lot and trigger wildly after being struck the initial hit. You need something much less acoustic in quality. You'll have the same problem, to a lesser degree, using a normal drum.

What kind of drum brain?

The transient designer kicks major booty.....so me thinks I'm shelling out the buckage to get it. I know this probably only affects me and you, Tom, but still...good news for UAD and Paris.

RodAaron,

The plan is to back the cymbal in rubber. That way you just get a kinda "tick" sound, but the drum stick bounces off it like you hit a cymbal, rather than, say rubber. ;o) ...which is what the factory pads are made of.

The dude just left and I don't recall the brain brand. Not a "major" brand.
Picked up 2nd hand for about \$700. I'll find out tomorrow if you like.

Cheers,
Kim.

>Kim, I did a TON of tests with this back in the day. (circa 1990) and depending on the piezo and the brain your hooking it up to, you may or may not need to do anything. Basically, as a rule of thumb, I'd say set your drum brain trigger sensitivity to 50%, of whatever half way up is. If the triggers work great...and I mean great...no false triggers, rolls are tracked cleanly, volume is linear, or at least pleasingly believable, then your done. If not, try soldering different value resistors between the hot and ground (I did it in the 1/4" plug so the vibration of the stick hitting the trigger wouldn't cause it to come loose) Until you achieve the above results. Then tweak the drum brain sensitivity controls slightly to taste.

What Aaron said is totally right, If the cymbals are used in the classic sense. I suppose if your taping a bunch of foam underneath them, they would work. I found the old tunable Remo practice pads made great triggers if you glued/caluked the piezo to a piece of plastic and stuck it right between the head and the foam. I used cassette cases for the plastic. Just 1 half of it cut with scissors so it's just a flat piece of plastic about 2" by 4".Calk the trigger on it (or hot glue) and your done (except for the resistors)

-----=_NextPart_000_0011_01C84115.062B7890--I haven't converted cymbals but that approach of deadening the cymbal with rubber should work OK.

Like Rod I created some trigger pads from Remo practice pads. I wired the piezos straight out to 1/4" plugs and they work fine with both an Alesis D4 and a DDrum 4 brain.

I cut a circle of a hard laminate material (forget the name), wood-like but more dense and only about 1/4" thick. I glued the piezo to the back of this resonating material. Between the resonating circle and the drum head I put a circle cut from a mouse pad. This gave the pad a better stick response. I cut the original foam down to make room for the resonating circle and mouse pad circle, what's left of the original foam is behind the piezo, so it's well protected. These homebrew pads still work great, I still sometimes use some of them for extra triggers on my DDrum kit.

Cheers,
-Jamie

www.JamieKrutz.com I don't know what all has changed, but screen updating is more responsive.

Cheers,
-Jamie
www.JamieKrutz.com hopefully it will become useable for me as i had to go back to 7.2.
my biggest complaint was/is that my channel levels would change every
time i hit play from start...very frustrating.

i think i'll pass...oh well...what's a little longer wait for
something that hopefully works.

Word to the wise...if you decide to test this, and just "happen" to pull in a couple of tracks to test it on, they're, oh say, a couple of Overhead tracks that you happen to be using in a mix that your working on for a client. Don't forget to render some new tracks first, or you'll be screwing up the originals. Even if you KNOW this.....if you're multitasking (ebay for example) and it's morning, and you don't have enough coffee in your system, you still may forget.

NOT THAT I WOULD MAKE THIS ROOKIE MISTAKE

Jeeeee CRAP!

lucky for me I have really good back up habits. I was able to pull the files from my back up drive. No big deal. A couple minutes of "I really hope I backed all that up" though
