>You won't be able to buy Apple computers at Walmart or seven eleven any time soon. There are plenty of places you can buy them though. I think Apple has over 200 stores now??? How many retail stores does Dell have?

CompUSA is gone for the most part. Brick and mortar stores are CircuitCity, Best Buy, Micro Center, independent Apple dealers, Apple retail stores, college book stores. Then there is online and catalogers. Apple store online, MacMall, Mac Zone, Mac connection, etc., there are also many academic resellers online.

In the past Apple had a hard time competing in retail stores like best buy in the past. MS, Intel, PackardBell, NEC, Acer, eMachines, etc., would give sales people sales spiffs, free trips and so on. Apple machines would be put in the corner. The machines would be sabotaged.

I remember the apple display at a best buy some years ago. The one machine was F'd up and dirty. Keys were missing off the keyboard and it had pop corn poured over the keyboard. The other machine they had was dirty, the cables and cords were missing and it was unplugged. When I asked a salesman with his Microsoft name plate to show/demo me the machine he tried to discourage me from buying a Mac and told me they were going to stop selling Apple computers because nobody wanted them. He couldn't show me anything because he didn't even know how to use a Mac

Apple was getting a lot of complaints from Mac users about having the same kind of experience. Apple pulled their products from many retailers as a result. Apple then tried the store with in a store concept with CompUSA, where they had a Apple Specialist on hand most of the time. The other thing Apple did was open the Apple stores. Apple was no longer going to have their products be treated like second rate citizens.

Apples popularity has grown and big retailers want to carry Apple products. Apple wants your experience to be the same at every retailer that carries Apple products. Not everybody will get to carry Apple products because of this.

>I wasn't actually talking about Walmart or 7-11....I was asking a serious
question, not
taking a swipe at Apple's distribution. There are plenty of online
retailers in general - I was just curious about brick and mortar
since it's rather difficult to test drive anything other than music and
video online. I also don't really care how many
stores Dell has. I've never bought one, owned one or shopped for one.

Maybe it is different in your state, but CompUSA is the only store here in
Colorado Springs that carries Macs, and it is a separate section. Best Buy
does not, Circuit City does not, Staples doesn't, OfficeMax and Office Depot
don't, and we don't have an Apple Store (there is one in Denver, but that's
the closest). That's one place to go and try before you buy, if that
matters to new customers.

There is no Apple product specialist on hand - just a CompUSA staff kid,
same as every other department. It must be quite expensive to staff a store

with an Apple rep - probably one reason the case and OS cost so much more.
;-) (the cases are quite nice).

And fwiw, nothing survives Best Buy, so I don't know if distribution there is good or bad in reality...not a model store for support or quality sales - it's just big and that's about it. Nothing stops people from locking up comps except the store/staff logins, which many are using now to require users to get an employee to demo the comp for them - that's true for Mac or PC.

But also fyi, Apple didn't become a second class product unless Apple allowed it be viewed that way, nor is it somehow a superior, elitist "experience" by allowing certain stores to carry them only if they setup a separate section for their products. It's just a PC (personal computer) with a different wrapper, but of course, the best snow falls from marketing departments.....

FWIW we have three Apple stores around the Denver area. Plus CompUSA,

MicroCenter, and I guess Best Buy is getting into Macs. Seems like all the colleges/universities around here offer Macs in their campus bookstores. CompUSA and MicroCenter had Mac specialists last time I was at those stores.

Sounds like C Springs is being somewhat neglected with only one Apple retailer. Better than none at least. You can often get better deals online anyway, like Amazon's rebates for example, or refurbs from Apple's online store.

Cheers,
-Jamie

ut the number of tracks, it might. We had Dave
Weckl's kit to handle so we needed max inputs.

We thought about bringing pres but for ease of shipping and simplicity
we took it off the board inserts by plugging in part way. I made the
whole rig: rack, cables and all, fit in a hard Samsonite, if I do say so
myself. Worked like a dream.

 >RodTC,

I received my Adam A7's just over a week ago. Spec page shows flat from 46hz to 35khz so I don't know what's happening below. I mix without a sub but you are right, when I turn on my sub I can hear and feel the freq's below and is important to know that they are there especially with heavy kick or keyboard bass patches. I went from NS-10's to A7's.

The A7's definitely are smoother, more precise and warmer. The cabinet is deeper and ported. I also was recommended to just up the pwr to 200w to push the NS10's and they would come alive. I had been using the Alesis RA-100. I recently have seen new Alesis pwr amps with 200 or 250w which I considered primarily because of how quiet and cool they were in my simple home single room studio, but I didn't have much info on them.

Since I only run a single output audio for monitoring and mixing (stereo only) from the MEC s/pdf to my DAC1 and balanced cable to the A7's, I also chose this powered monitor due to the power switch and volume knob on the front. When tracking, I use the DAC1 headphone jacks and turn off the A7s'. The DAC is set to variable so that the DAC volume control controls both headphone and monitor levels.

So considering where I came from and after a week of mixing I'd say this about the A7's . . . they translate better than my previous setup and are less fatiguing.

btw - I posted an ADAT card for sale on the FS site for those interested.

Glad you're digging yours. I didn't set up the sub last night, just the satellites and just giving them an initial quick listen with some CDs I know well I'm happy. They sound better than I remember, great transients, which matters to me.

I think I'm going to start with the sub just set with the 85Hz rolloff filter built into it and go from there.

TCB

>How many of you are using some kind of motorized fader device? Does it have
touch sensitive faders?

I've got my initial design done and I'm trying to finish up my prototype of
a 16 channel motorized fader control that will have both MIDI and EDS serial
connections on it. :-) I have the chance to get either touch sensitive or
non-touch sensitive faders, but the touch sensitive ones are twice the
price. :(

Now, if I was making a completely self-contained mixer, I'd go for the touch
sensitive faders, but since this is basically a remote control that may or
may not talk to an application that understands touch faders, should I
bother?

Doug

<http://www.parisfaqs.com>Wow,,,,, cool stuff Doug, do keep us up to date man.

having it fight you.
Touch sensitive has many applications in automation - go for it. :-)

There will also be some automation updates coming in Nuendo 4 and perhaps
Cubase 4.1 as well - if you use

either you might appreciate the more capable faders.

About the repacking you could just take out the things that show that this is a new item , you know plastic bags covering the item any invoices etc...

You can use the same box just input (if you please) a simple invoice inside parcel indicating a sale price for a used faulty camera at 225\$.

Also on declaration same things "must" be written, price description...

Thank you again for considering in helping out !!!

Regards,

DimitriosDear Tom,

I am posting here because I get always returned emails from your address.

Please check that with your provider because I have never had that returns with other recipients.

Thanks !

Dimitrios

I agree....I mean first of all, if you can find on on the aftermarket, you will have immediately "saved money". You wouldn't believe how much money I've saved by buying gear.....plus, how are you going to be able to resell a roof cleaning and window washing on EBay once something newer and more expensive comes along? Chicks just don't get it.

r?
They should be in convenient locations, right? And what devices would you
want to control with something like this?

Doug

let me rephrase that....!Doug,

Just go for the whole ball of wax and add a small ASCII keyboard, Kensington
Pro trackball,
and a couple banks of assignable keys, a la X-Keys, with a preset mode to
load setups for different DAWs.... :-)

For me in particular, having assignable keys (not just function keys) is
extrememly
benificial for editing/composing, though probably not top priority for a
mixing controller.
I know a lot of other users would be happy to buy a controller that exceeded
a Mackie controller
and took a bit from the Euphonix MC
(<http://www.euphonix.com/post/products/mc/mc.htm>), and sold
for under \$5k or so.

The MC runs about \$18k I believe, but has a dedicated protocol (Eucon) for
Nuendo, ProTools, etc.
Using USB midi would be fine, though if you want to go high end, ethernet is
worth a look.

Understanding that the above is probably a little unrealistic, to your list
I would add a jog/shuttle wheel
and assignable keys if possible. I assume you are aiming for a generic midi
DAW controller rather than proprietary
to one DAW.

Regards,
Dedric

hehehe!!!!

Something between the Mackie and the ICON for 5k. Leaning as close to the ICON as possible. :) Generic DAW usage, but specifically something good for plugins (see ICON). So I think you'd need more displays and plenty of knobs.

Graham

> So, you guys don't like the Mackie Control? I haven't used one, so I don't
know anything about them. \$1200 seems pretty cheap. Heck, just the faders
I'm trying to use are \$40 each - and that's in quantities over 100..! And
I'm using 17 of them...

As for connections, USB and 10/100 ethernet are already included on the development board I'm using. :) I'm adding the EDS serial comms and MIDI to it. And while my primary intent was to make a motorfader control for PARIS, I don't want to be limited to any particular software package. I forgot to mention that I do have a jog wheel, and that all buttons are assignable - I've got enough eeprom to probably store 100 different setups...

Doug

<http://www.parisfaqs.com> VERY cool!!!!!!!

Thanks for posting it!

>

>-steveHi Doug - the Mackie Control is a great unit, but there is a big gap between the Mackie/Tascam/Houston

range and a Euphonix MC or Icon - while the price gap seems to exceed what a midi controller does, the

Euphonix MC is amazing. At first glance it looks like a keyboard, set of faders, a couple of track ball/wheels

and some buttons, but the buttons are not only assignable, but also LED color coded and programmable for visual

feedback of their function, switching automatically when switch systems, as

well as (I am guessing) all rotary encoders,

faders, and buttons recall their state for the project being worked on...oh,

and the touch screen is sweet as well.

That's the higher end of what's out there for sub \$20k units, so something that enhances what the Mackie offers

would be a great mid-range unit (17 faders is already a step up).

Keep us posted - interesting project!

Regards,

Dedric

Thanks,
MattDoug -

This is all very exciting, what you are working on here. I know you have gotten good suggestions from the others. Any way to include this in the design:

<http://raildriver.com/assets/images/shipdriver/sd.large.main.jpg>

I think I really need that in my next control surface, or I am gonna die!
