>The connection quality is far less with a TRS (longframe or standard

for that matter) jack than with an XLR. The XLR has a good solid connection, whereas the 1/4" jacks can move (rotate) with vibration. While this is not a problem with line level signals, it IS a problem for the very low level mic signals where Phantom power is concerned. ANY variance in the Phantom supply to a mic will be instantly audible.

I worked at a studio once that had a bantam mic bay... anytime I did a session in there, I had to lay a blanket and phone books on the cables to keep them from vibrating... I even spent lots of time in-between cleaning the plugs (brass) to no avail.

YMMV... but I doubt it...

Cheers,

David.
