Not to say other plugs don't rock, but from what I've heard so far UAD rock just a little harder.

nd

slowly widdled it down to 2. When I solved the last 2, another 300 appeared because the compilation process could now progress further (and hit more problems).

Chuck has been completely run off his feet and not even on the continent much of the time. When he gets a chance, the Mac will come. It a huge kindness for him to offer to send it. Until then, I'm learning a lot about C++ through these efforts, so it is a joy for me to do it. It would also be nice to leave VC++ 6.0 behind for a more modern compiler on the PC, which could follow from this work.

I don't have any firm release dates, but I want you guys to know that I am trying, and one way or another, we will get there. :)

All the best,

Mikelt's like two more electrons per hour hang at one end of the cable. Basic laws of physics state that on a conductor unless you do something to it the electrons will spread themselves out pretty evenly. I haven't poured tequila into a glass and had it hang out on one side away from the ice recently.

But Eric is nuts, and a far better geetar player than I am, so who knows?

might be FUD, but it makes some sense.

TCBMac's suck!!!

(dang, sorry, it just slipped out...).

I don't know, but the bass player in one of the bands I'm in just got the Euphonix and loves it with Logic. He dumped the Logic Control fader box which he says was junk in comparison. So if you can wait it out, it sounds like their stuff is worth the wait. Or buy a Mac. ;^)

Cheers,
-Jamie

(I wonder if there's much of a used market for those?)

On 6/17/08 5:06 PM, in article 485853b1\$1@linux, "Bill L"

<bill@billlorentzen.com> wrote:

> Finally!Hey Mike.

Loving it more and more....

I have been setting up a new mix tonight, and whilst messing with the predelay,

I noticed that setting it to zero,

actually sounds as though it is more like 0.1 sec.

(longer than the available 80 ms.)

Is this possible?

No biggie, as 0.01 sounds fine, as a minimum.

Just wondering if this is an anomaly.

If it is, don't fix it, as I have warmed to this thing on vocals, and the extra 20 ms (as available on the stock Paris plate), is often useful.

(Unless ofcourse, you could up the maximum predelay.)

KimThere's no law that says people have to make smart business decisions.

TCB

Hi Jeremy,

Thanks for posting your observation! I'm just finishing a school semester, but I will look into this as soon as I can.

There does appear to be a 3dB bump in the middle. Weird.

I just took the blend code from the reverbs and grafted it into the compressor. Maybe I introduced a bug.

Cheers!

Mike

Actually, yes. All you need to do is replace the tubing with another
6- or 7-foot piece of clear aquarium tubing, and you're good to go.

That's the only icky part. If you want to wipe the mounting nipple
(yes, I said "mounting nipple". Get over it.) with disinfectant, you
can. Probably shouldn't spray Lysol into the throat of the driver....

pab

As a side note -- my Talkbox is a production mate to Frampton's
original Heil Talkbox. Mine is in need of refurbishing, but it came
from the same fiberglass run that Peter's did."Mike Audet" <mike@..> wrote in message

Friggin hack!

sheesh!

hehehehe Since it's a fixed install you could use solid electrical copper wire.
Maybe that would be good?

i'm sure everyone loves the work you are doing. certainly no one expects
uad-1 like "support".

you are in school... cool! i thought we were all old-ish dudes here.

:~)

best regards,

jeremy "all oldish dudes here"... hell if most of us here lived in
afghanistan... we'd be dead of natural causes; me for about 9 years
already. soooooooooooooooooo mike..... lets get on the stick already.

I've got a collection of them and I'm stringing them together. When you get about 20 of them strung end-to-end and lay the strands out side by side, they look like dreadlocks. I'm gonna' sew them into one of those Cheberets and wear it when I go down to the natural food store here. I should fit right in.

I've got some more goodies coming soonish. I've been editing a variable knee compressor that I found in the noLimit folder Chuck posted, I've been chipping away at the gated reverb, I've got an algo coded to generate white noise for snares, and I'm working on the Mac ports. I got my marks in yesterday, and the summer holidays officially start on Friday.

Good things are coming!

All the best,

Mike

- Wizoo W2 verb
- IK Classic Reverb
- Princeton 2016 Plate Verb
- Waves IR1

For Paris, I love the Original Plate reverb..I have not had a chance to listen to the new Verbs form Mike..But, If Tom and other say they are better than my fav stock Plate, then i'll I'll their word..

;- Kerry
> Micro XP is a hacked stripped down version of XP. It's apparently popular with
gamers... A friend at work got a hold of a copy and I had a chance to try
it. I work at a computer repair shop and the idea behind trying it was to
make some of the older P3s usable again. It works! It takes about 10 minutes
to do a complete install. When the system is booted up it uses 36 meg of
memory and runs 15 processes! Nearly everything has been stripped from the
OS. There is no local networking, no scheduling, and no internet explorer.
It will run Firefox though so internet is possible. Most XP programs will
run on it.
Just for giggles I loaded it on a 900MHz P3 with 256mb ram. Then I installed
Cubase LE and loaded in 10 stereo tracks of audio and 15 plugins. It ran
it perfectly and wasn't bogged down at all! So I added 10 more stereo tracks
and it ran those.
I tried it on my Paris box at home as a dual boot and so far so good. It
seems to be immune to some of Paris's bugs.
If you decide to try it get version .08 not version .06 which is more commonly
available. I'm still testing I'll do a more complete synopsis when I'm finished....
MBIn support of Kerry's findings, that is pretty much in line with sale
numbers from the Paris video, maybe even a little light from those numbers.
