>Yeh, I think plenty of us have gone through that kind of problem without
remembering 5-8 years back in time. Now I remember we could get a program
that changed which recording program that should be active, if you had more
than one installed, to eliminate chrashings. It can be a good idea to
uninstall all that kind of stuff and use a regcleaner program to clean up
the reg file. Maybe start regedit and search for strings to the uninstalled
programs and delete it manually before only installing the program you want
to use to record CD/DVD's with. But as allways, it's a good idea to have a
backup of the system.
