I don't know the HM-2, but it sounds to me like a mesa boogie vibe, or something similar. It's different than my Marshall, and I've always been a Marshall guy so I'm not too familiar with other amps. But, I'm really into this one.

I've got some VC controls to move around and one to remove. Should have it out soon.

This is nearly a dream come true.
I always record DI guit as well as a mic'd cab.
(Sometimes the cab sounds like poop).
During tracking I often run the DI channel through a
Sansamp stompbox for initial "vibe". A bit cumbersome, though.
Some shekels coming your way when it is ready for primetime.
Thanks for your efforts.

und excellent and, Rod, very nice playing! Great guitar work too. I guess the finger is up to speed again.

Your music invokes my old Tull inclinations. I got into them on the very first album and tour and saw them many times in concert during the '70s. The green fields and forests of ye merry olde England come cheerfully to mind when I hear your music as well.

As an aside, my brother had dinner with Ian Anderson a few years ago in England. He is friends with my sister in law's family. I would love to meet him some day.

> NeilThanks, guys... and, Bill, the finger's not quite up to speed
yet - this was tracked well before all that happened.
HOWEVER, it has healed-up pretty well, and apart from the fact
that it's pretty numb (the doc says nerve endings take longer
to heal, and it could be awhile until i get some normal
sensation back), I can at least use it. It looks little bit
weird... I mean, you can tell something happened to it & all,
and the nail isn't quite normal, either, but it's much better
than the alternative!

Interesting that you should cite a Tull-ish-ness to my music...
I hardly ever hear that comparison made, but yeah, those guys
definitely got some spins on my record player back in the day,
so i'm sure some of their influence leaked in somewhere.
I'm also glad that it evokes something like that which you
mentioned; that's really the purpose of my music - to take you
somewhere else for a little while, like a good book or movie
does.

>Hi Dimitrios,

DSP/FX may be able to do it, but only if the new algos weren't too cpu demanding for the dsp card.

You would need the source code and the compiler for the dsp card. Then, you would need to change the ui code to accommodate the new algos.

It may be possible. But, you'd need to get the tools and the source from DSP/FX.

Cheers!
Mike

I did a project a few months back wherein I used Melodyne to

build a harmony backing vocal track on a couple sections of the chorus... the guy can sing, he just can't do harmonies. So, the alternatives were:

- 1.) Find someone else to sing it
- 2.) Live without a harmony track
- 3.) Use Melodyne to build one

Simple choice in this case... took me maybe 20 minutes, max. Cloned the track, let Melodyne generate it's little files, adjusted the pitch on each one, nudged 'em forward or backward a teensy bit here & there so it sounded like a natural double instead of a cloned one, then tweaked the formant up a little bit for the same reason, and... done!

In the end, the song became the beneficiary of the technology - taking the view of "if the performer can't do it right, it's not going to be done" would have cheated the song out of a better end result.

NeilWell, I've read all the other posts to date. I share many of your thoughts and concerns about having this kind of technological power at our disposal and, even worse, having clients KNOW that we have these powerful tools available.

I originally bought AutoTune for a project that involved a singer who couldn't sing in tune to save her life. It was in the good old ADAT days and tuning would have involved transferring tracks into Digital Performer, tuning the bad notes, then transferring back to ADAT for mixing. I thanked God when that project went elsewhere and I owned AutoTune for another two years before I actually began using it. I have had people ask up front if I have AutoTune.

If I had said "no" they would have definitely gone elsewhere. I've gotten pretty darned good at tuning vocals without making them sound like they're been tuned. I have also had vocal tracks that were so consistantly flat that I had to dump them into Protools so I could run the Waves Soundshifter plugin on them to bring them up 12 or 14 cents. Then I could import them back into Paris and use AutoTune on them.

My concern for myself is that much of the joy of recording music is gone.

I'm grateful that I get to record a fair amount of "straight ahead" jazz that doesn't get overly processed but for other kinds of projects I find myself more and more being the one who makes bad stuff sound better and OK stuff good. I actually don't mind making really good stuff sound great.

To my mind that's the most valid use of AutoTune or digital editing - to take a killer track with a couple of small flaws and make it just right.

The projects that call for massive manipulation just eat at me. And since I do do this for a living, I can't afford to be anything but a Miracle Worker.

In fact, it's what brings me business at this level. The good news and the bad news all rolled in one.

My concern for the musicians is that they aren't going to learn anything from a session in which they can screw up every which way and still go home with a CD that makes them sound like a bunch of LA session players (more or less!). It's taken me 44 years to get to my current level of skill playing the guitar. When the very first cassette machines came out the keyboard player I traveled with and I invested in one and we began recording every set, every night and every night after the gig we listened to it all. Every night. Six nights a week. You learn a lot about your playing doing that. And learning to play in the studio was a similar process. Record, listen, record, listen, record, listen... and learn. What do the people learn from watching me tune and slide and copy and paste their tracks these days? They learn that they can screw up and I'll fix it.

Remember the old Protools joke where the producer gets on the talkback and says "It sucked! Come on in!" It's not so funny any more!

fact, it has been several
years since I actually had FUN on a session... AND I turn away a LOT of
"undesireable sessions"... pretty sad. Most of the good stuff is being
done at the musicians home studios, we never get to see it.

David.

<http://www.sonicstate.com/news/shownews.cfm?newsid=6269> Dear Mike,
Can you have a INPUT knob so that we can lower the input by around 4 db's
as to prevent the overloading on the input stage ?
I carefully examined this wonderful amp !!
It really sounds great , can make also some great clean amp sounds for guitar
and bass.
BUT needs to lower the input in any file I used !!
Thus you prevent the slight distortion occuring just because of that overload.
I tried a compressor before the amp and lowered around 3-4 db's.
I produced some amazing clean bass sounds and guitar sounds that made me
smile!!!

Thanks Mike.

I will donate some more the soonest !!

Regards,

Dimitrioshow do i prevent latency with waves plugins-what is the full procedure-thanks-JoeHi
Dimitrios,

I will check into this. As far as I know, the preamp gain is an input gain.
I'll check it out, though.

Thanks for posting about this!

Hi Dimitrios,

Let me know if this build solves the problem. I dropped the volume around the input transformer. It's actually completely volume neutral now, though it sounds like the volume drops because of the 12 dB loss in the presence eq, which you can adjust if you need to.

Thanks for catching that!

All the best,

Mike

>>>BUT needs to lower the input in any file I used !!

>>>Thus you prevent the slight distortion occuring just because of that overload.

>>>I tried a compressor before the amp and lowered around 3-4 db's.

>>>I produced some amazing clean bass sounds and guitar sounds that made
me

>>>smile!!!

>>>Thanks Mike.

>>>I will donate some more the soonest !!

>>>Regards,

>>>Dimitrios

>>

I was wondering if you could help me calculate what i would have spent on upgrading my system from my audiomedia II card (circa 1994) all the way to present hardware /software.(pro tools HD3 system) I tried looking for price sheets with the trade in allowances but nothing on the website goes back that far. I am considering a new HD 3 system and am trying to figure out what the incremental upgrades would have cost as opposed to other routes. Pricing sheets from 1994 to present would be great. thanks in advance!On 11 Mar 2008 14:01:34 +1000, "Neil" <OIUOIU@OUI.com> wrote:

Nice!! I like that one a lot.

Ya know, if that drummer guy practices just a little bit more, he
could probably do that for a living...

;-P

pabsome days are just tougher than others.

;o)

person who does not consider the Iraq war both morally and politically suicidal. I'm sure there are exceptions but giving it a wild guess I'd say it's 90/10 against, or at least in that neighborhood.

I've been vocally antiwar on Iraq since Colin Powell was pushing crocked data at the UN, and I don't plan on changing that.

Just to add more fuel to the fire, I was talking to an Israeli friend of mine recently and asked him what he thought the life expectancy of Robert Novak would be if he outed a Mossad agent working the antiproliferation beat. He thought for a minute and said 'months.' I'd say there's enough moral baggage to go around.

Hey all,

I was walking from the Asok skytrain station to the subway yesterday and heard some really interesting music. It was two guys from Issan (one of the poorer areas of a generally very poor country) playing music. One was on some makeshift drums (still, he had a cowbell!) and this is the other guy. Check out the guitar-like instrument, which is basically a board, a pickup, and three strings with some frets placed in places them very odd to our well-tempered selves.

He could really flippin play as well. I dropped 50 baht into their tip jar and recorded about five minutes of music.

TCB
