All you could do is bounce the track with all the effects you want.

.....it's good to know that the end of a great era of Texas music coincided  
with the beginning of a a great era of familyhood for you.

Happy new year.....

;o)

As I recall, the last time you bailed out on XP you were attempting to set it up on an older setup.

Regards,

El Miguel

I'm thinking that since no one uses mixers anymore during tracking and  
\*riding the fader\* really doesn't apply as far as boosting/attenuating  
signal levels in DAW control surfaces like the C-16, the appropriate  
terminology for this situation while tracking would be \*riding the  
pot\*....and somehow that just doesn't seem a good thing to discuss in polite  
company so it's easier to just use a compressor.

;o)

No mic pres to speak of as I use my alesis Studio 32 pres for any recording I need, mainly V/O.  
I don't do much music any more, mainly Doco's and Corporates/Commercials.  
In 1984 I quit studios altogether and started doing location audio for TV / Films / Docos etc.  
The first 10 years were almost totally spent doing Beyond 2000 / Beyond Tomorrow as part of a 3 man (person), crew travelling around the world.  
I reformed my Studio back in 1999 with Paris, and used that successfully syncing to video, (SP/Digi Betacam), until I needed to be able

to sync to  
AVI's and Mpegs....Paris couldn't do it so I got Nuendo and found it did all that stuff that I required way better than Paris, although I really liked the sound of Paris and the fact that it was a CPU independent system.  
I'm just starting to venture into Surround...what a minefield, but fun.

What if I tell it and it refuses? Is there some way I can force it to do this whether it likes it or not? If so, how?

;o)

but not in real time.

First, I ask the artist to lay down a dummy vocal so we can see vs./ch. or  
whatever.  
Then we cut whispery stuff with a high gain and shouting vocals with a lower  
gain.  
Result - far less need for compression of any kind.

I work with some classically trained vocalists who can sing in any part of  
their range without gain problems.  
Then there are folks who need some help:the knob, the comp, or alcohol!

Best,  
Lance - Budding old fart.

>Found the problem. Didn't have the "allow users to change my files" settings  
clicked on the SX computer so though I could transfer from the SX DAW to the  
Paris DAW (backasswards from what I need to be doing), I couldn't transfer  
from the Paris DAW to the Cubase DAW. Pilot error .....as usual.

Seems like I need to build a DAW a week just to keep my syanpses firing  
properly. When I go for a couple of years, I forget one of the  
327443333333337892 simple little things that are necessary to make this  
happen.

I did talk to Chris Ludwig earlier today. It ws gratifying to know that  
99.9% of the wierdness I've experienced while building this DAW has also  
been encountered by others.

OK.....now where was I????

;o)

ng about when you select  
a whole tracks fader automation and want to put it up say .2 db sometimes  
it will only go up .5 or so. The shift drag thinkg does not seem to work  
for me at least.

Cujo,  
Same here. Usually works but not always.

3.1

Tom

"cujo" <chris@nospamapplemanstudio.com> wrote in message =

Thanks EK, I know about all of that but I was talking about when you =  
select  
 a whole tracks fader automation and want to put it up say .2 db =  
sometimes  
 it will only go up .5 or so. The shift drag thinkg does not seem to =  
work  
 for me at least.

>>>>>>

>>>>>>Ed and Edna,

You're doing this with "Normalize mix"(Ctrl+N). If it's 0, the highest channel volume will be 0db. If you're setting it to+4, the highest channel will be +4db. All the other channels will automatically be following with +4db. If you need 2 more db's up, it's +6. It can be a little tricky if you have some volumes automated. Sometimes it will not follow the "normalizing" process, so you have to go into automatin mode(Shft+E), mark the automations red and normalize it with the same +4db's in "Change volume"(Ctrl+E). If you're learning the automation tricks, it's like a new world will be opened up for you. It's a good idea to find out more about it from the manual.

Since I work on nearly all DAW platforms, I can tell a Sonar mix. because

it has that very nice generic (non coloring) sound.

Logic-can't tell, DP, Can't tell, SX-I can Spot, PT-Yes, Paris (well Of Course) and so can my producer friends. They can spot the a PAris mix right away.

A CD produced in Paris...I'd say you've contributed something  
useful...congrats!

I you have any digital gear interfacing with the Paris spdif I/O and = the RME

spdif I/O and you have created a routing matrix between a DAW running = as an

external FX processor and a control for digital patchbay routing which = is

controlling the I/O routing between your Paris DAW and your Cubase SX = DAW as

follows:

#### Paris Submix 1

Cubase CH 1>RME 1 ADAT 1-1 out > Paris CH 1

Cubase CH 2>RME 1 ADAT 1-2 out > Paris CH 2

Cubase CH 3>RME 1 ADAT 1-3 out > Paris CH 3

Cubase CH 4>RME 1 ADAT 1-4 out > Paris CH 4

Cubase CH 5>RME 1 ADAT 1-5 out > Paris CH 5

Cubase CH 6>RME 1 ADAT 1-6 out > Paris CH 6

Cubase CH 7>RME 1 ADAT 1-7 out > Paris CH 7

Cubase CH 8>RME 1 ADAT 1-8 out > Paris CH 8

Cubase CH 9>RME 1 ADAT 2-9 out > Paris CH 9

Cubase CH 10>RME 1 ADAT 2-10 out > Paris CH 10

Cubase CH 11>RME 1 ADAT 2-11 out > Paris CH 11

Cubase CH 12>RME 1 ADAT 2-12 out > Paris CH 12

Cubase CH 13>RME 1 ADAT 2-13 out > Paris CH 13

Cubase CH 14>RME 1 ADAT 2-14 out > Paris CH 14

Cubase ST CH 15L/ Stereo Group 1 L> RME 1 ADAT 2-15 out > Paris CH 15

Cubase ST CH 15R/ Stereo Group 1 R> RME 1 ADAT 2-16 out > Paris CH 16

#### Paris Submix #2

Cubase CH 16>RME 1 ADAT 3-17 out > Paris CH 1

Cubase CH 17>RME 1 ADAT

CH 15

> Cubase ST CH 48R/ Stereo Group 2 R> RME 3 ADAT 3-24 out > Paris  
CH 16

>

> .....then you need to remember to turn on all of the external  
digital  
processors that5 are interfacing with Paris and Cubase through  
the digital  
patchbay or directly before you turn on your external word clock  
module,  
followed by booting the DAW which is running the control panel  
for your  
digital patchbays and starting the digital FX processors in  
this box, then  
boot your Paris DAW, launch the Paris app and then boot your  
Cubase DAW and  
launch cubase. If you don't do it in this order, Paris will  
crash.....and  
I'm pretty pissed that this was nowhere in the manual.
