Once you know if there is a problem there, add a new SCSI cable and another card. Put a SCSI card in the MECs so you can see which one is on. A, B, C as you start initializing and which card is card A, B, C as you start adding more hardware. the MEC i sent you is one of 4 that were working perfectly when I took my system off line. I can't imagine it being a problem. Bent pins on SCSI cables can be a serious issue though. Your system is

on the bottom)... I A/B'd them against several monitors and
they came in dead last... horrible imaging and a weird mid
response. I ended up choosing the 6328's though... go figure.

<http://www.focalprofessional.com/en/products/tween6Be.html>

Not cheap, but they sound really good... *almost* went with
them... but we got terms from JBL on a large order so that's
why we ended up with the LSR's.

David.

> On that list, the DynAudio's would be my pick, and maybe those Adam's
in 2nd place. Don't know a thing about the Focal, but Events,
Mackies, and JBL's would bug me for sure (for various reasons), so,
yup: DynAudio, or Adam...

Regardless of what you choose, consider where you'll be putting them,
and steer clear of rear-ported boxes if you're putting them anywhere
near walls...

-- happy hearing -- chas.

(oh, and keep the NS-10's for sure -- and listen to them every now and
then for a little audio sandpaper before going back to your "good"
guys... You'll be smiling, I bet...)

Nothing on your list of possibilities will provide a more viable mixing system
 than what you already have, NS10s...I have heard all of your possibilities
 except the focals, and mostly agree with your assessments of the shortfalls...each
 of the systems mentioned IMO lacks sufficient bass and overall system clarity
 - enough that your mixes really won't be any better as a result of spending
 a lot of cash, but they will be different.

If you are wanting something deadly accurate, you will likely be spending

a much bigger chunk of change...If given a chance, you may want to consider a used set of JBL 4311, Altec Model 19, Urei Time Aligned, Tannoy Golds, or some other mid field monitors - these boxes all have their own quirks, but seem to be less forgiving (thus causing you to be more accurate)

There again, I like mixing with Radio Shack Minimum 7s...

At some point the intricacies of relying on digital connection, innumerable
ADDA, etc., seem to fall into the realm of major risk taking...

Again, just an opinion, but even with the wart infested Samp 9, having a
dedicated console eliminates almost ALL routing issues...true zero latency
monitoring, effects to cue sends, and no drivers to worry about...

Just food for thought...

news:469ad5e8@linux...

Ya Jeff,

At least half the times no C-16 was attached.

Do you think that a bad C-16 cable could cause these issues?

I'll remove them from the setup until all is well.

I know at least a few times it worked that the C-16 did also.

Tom=20

"Jeff Hoover" <jkhoover@excite.com> wrote in message =
news:4699b378@linux...

Tom,

Stupid question, but did you ever start up without any c16's? If =
so did=20

you see the same issue?

>=20
 this procedure pretty well.
 >=20
 >=20 It's on page 4 and 5 of the 3.0=20
 version.
>=20 >=20
 >=20 It=20
 kind of sounds to me like you may not be hooking up=20
 the
>=20
 correct
>=20
 =3D
 >=20
 >eds
>=20
 =3D3D
>=20
 >card
>=20
 >=20
 >=20
 the master mec.

 >=20
 >=20 >=20 This is really a novice oriented =
 question=20
 but . . .
>=20
 >=20
 >=20 It doesn't matter which card is the "A"=20
 card
>=20
 >=20 in your system as far as Paris' ID orientation=20
 right?
>=20
 >=20
 >=20
 >=20
 >=20 Yes, it does, and the orientation of the slots you=20
 are
>=20
 in
>=20
 =3D
 >=20

wrote: Guys, I'm all set with the cables the=3D20
 which card is A=20 bit.
Rod you were right about what I=20 was=3D20
 asking.
In any event I scaled down to = one EDS=20 (Pretty =3D
 & sure=3D20
 & that's card A=20 =3D3D
right?!))
and plugged it into = each of=20 =3D
 & my=20 two=3D20
 & working = Mecs.=20 Paris will boot but
even internal clock was=20 =3D
 & =20 & never=3D20
 & = found nor=20 were the in/outs on each Mec.
The 442 on the other=20 =3D
 & hand=20 works=3D20
 & like a = champ one=20 card only. I suspect
either all my Mecs=20 =3D
 & =20 & are=3D20
 & = screwy now or=20 the SCSI cables are intermitant = =3D
 & =20 = & at
b est.
It's=3D20
 & bsp; & =20 & working fine with the 442 so I'm sticking with that for = =3D
 & = & today.
I'll=20 add=3D20
 & my EDS = cards one=20 by one and see if that is back = to=3D20
 & =20
