>The Titan is a multipattern LDC with a titanium capsule. It's giving me a lot of the U87 vibe without the honky mids that U87's are pretty well known for. Part of this is resonance of the stock Neumann 87 capsule I think as it seems to be pretty universal and can really bite you if the mic isn't carefully placed.....but that and the fet head amp are part of the \*sound\* of the 87. The Stephen Paul mod for a U87 offsets this by installing a better capsule and tuning the head amp, thus creating more air and a little top boost at around 10-12k. The Titan doesn't sound exactly like a Stephen Paul U87, but it does have some of the same vibe in that it produces a \*cleaner\* midrange to my ears while opening up the top end and it doesn't sound cheap or brittle. The Fig8 setting on the Titan is very nice as it can smooth out the \*inyourfaceness\* that LDC mics can exhibit on some sources in cardioid. The TEF sorta' speaks for itself.

<http://www.seelectronics.com/Titan.html>

If I was just looking at the TEF, I would immediately think 'woah....this is gonna be a bright mic". What this curve seems to do is work really well to "demud" dark sources without sounding strident.

> What can I say...I wish there had been two of me...one to play all night and

one to roam the crowd talking with friends I haven't seen in twenty years.

The bands played well (with the expected small train derailments) but every band hit their groove from the first down beat and tore through their sets with unabashed passion...I'd forgotten just how intoxicating playing live can be. Way too much fun!

The sound was crystal clear and punchy and our FOH guy did a really good job with every band and considering we were covering everything from CSNY to Deep Purple that was no simple task.

I haven't had a chance to look at any of the video or listen to the recording but from what the recording tech and video people said we captured the evening quite well.

So all in all an I'd have to say it was an unqualified success.

Don't figured I'd give my analog gear a workout today since the Cubase SX ADC is doing such a good job.

It's been a while since I've used a lot of analog gear in a mix because I've been using UAD-1 plugins.

.....what I'm finding/remembering.....

Avalon 737 EQ/comp works great on lead VOX for transparent \*bigness\* with comp set 2:1 with a low threshold, fast attack/med release and a 4dB boost at 20kHz if the output of the 737 is routed to aqg SPL de-esser set to cancel some of the spit that this unit seems to create due to the

tubeyness  
of the circuitry. Lots of air now without sounding processed.

JoeMeek VC-1 is a killer rythm guitar processor. Using subtractive EQ to cut the mud a bit and then compressing the track while dialing in some sparkle on the top end with the exciter circuit can give the guitar an almost 12 string fullness while cutting through a mix..

Distressors are monstrous on acoustic lead.....handle with care.

SPL Transient Dsigner on electric bass, kick and snare. Punchy, punchy punchy...just make sure you've got your levels in check because a lot goes a long way, you can get used to it and then not notice the holes you are

punching in the back walls of the control room until it's too late ;o)

Demeter HC-1 opto comp on second bass track with HP filter so that the LF isn't being squashed really creates \*smooth meat\* in upper fundamentals to complement punchy, punchy, punchy provided by SPL TD.

Paris EQ on panned hats with Focusrite RED compressor.....always wonderful

Paris nonlinear reverb on compressed snare.....also wonderful

Sony V77 on aux of drum submix with the \*Drum Room\* preset tweaked to taste is very similar to having a monster buss compressor on all the tracks riding just under the track mix.....a really nice solution for those of you who have been looking for a way to compress a whole drum submix and then feed it back into the main mix. I doubt I'll ever do the duplication/bussing to Fairchild thing in SX again. This sounds better to my ears.

Quantec Yardstick on vocals and acoustic instruments in varying settings. Really nice/open room vibe.

A little bit of the Lexicon PC90 Vocal Magic setting on lead and harmony vox tracks.

A touch of RNC in really nice mode outputting to Jensen JT11 1:1 balancing trannys on fiddle to give it some body and smoothing out any screechiness in the top without using subtractive EQ.

Even with all of this stuff patched in and the AD/DA's going on, the RME and Mytek converters that I'm using in SX for inserts are very transparent. I'm not getting any audible degradation.

I'd forgotten how much fun it was to use these boxes during a mix. Sounds really good. there's a dimensionality to analog circuitry that I forget about when using plugins, but it's definitely a nice vibe. I'll get more into the soundstaging/reverb panning and delays as well. Client/producer is coming over tonight to start the final mix.

The only thing about using all of this analog gear is that inevitably he's gonna want to recall a mix at the last minute.....then I'm gonna remember why I like to use plugins. Time to sharpen the pencil.

;oPThe UPS which keeps the NG alive, since the move, has been clicking. It sounds a lot like there's a relay inside which keeps switching on and off. You'll hear it switch twice in a row, sometimes really fast (like 200ms) and sometimes up to maybe 5 seconds apart, but always two clicks. Well, sometimes four, or six, but always pairs, or groups of pairs.

I'm wondering if, maybe, the power in my new neighbourhood is a little in

consistant, and there's some protection circuit in the UPS kicking in and out. It doesn't appear to affect operation. The UPS, for example, doesn't start beeping as it does when the power actually shuts off (which it used to do at random sometimes at the last place). Also, it seems there are times when it will do it a

lot, and times when it does it very little, or not at all. This morning it was doing it almost constantly... like every 15 seconds or so, but yesterday at one point I listened for a few minutes and it didn't do it at all.

Just wondering if anybody has any idea what it might be. All functions, including the phone line filter, seem to be working fine.

Any clues anyone?

Cheers,  
Kim.Gee, that sounds like a fantastic idea!

This weekend on Saturday night I had my 1/3 of a century birthday party combined house warming. Was great! People, food, beer. Didn't get any bands to play though. Mind you on the Sunday I played in a band to celebrate a mate of mine's 30th, which was fun.

I'm impressed you managed to get so many of your old bands back together, and going to all the trouble of recording the whole event properly, that's ace. :o)

Now off to read the thread on how it went! :o)

Cheers,  
Kim.

That's what I was starting to suspect. I mean it seems to be working fine.

I can see no evidence that it's falling back to battery backup or anything.

Power seems to be getting through and everything seems to be working fine.

I'm guessing maybe it's a case of fluctuations over voltage which are then

getting reduced back down by the UPS. Perhaps the voltage is just a little

higher in my street than it was.

My uncle is an electrician and dropped by on the weekend and commented that

the wiring is pretty average in my house. It is an old place I guess...

Cheers,  
Kim.Hi DJ,

Just an FYI for you and the Group - I worked out a group Buy on the TITAN , We can do this @ \$988 Same as the GEMINI

The Group Buy on the SE3 Matched Pair is \$ 548

I'll try to post some more info later -I sent Tony Benson some WAVE and Mp3 files as well as PIX from Roger Nichols etc... I probably max'd out his inbox in a major way :)

I think also that the UPS might be 230v, whereas Melbourne is 240v, hence  
perhaps there is some extra likelihood of overvoltage detection. Because  
of the 220v gear in many areas a lot of manufacturers make "hybrid" devices  
designed for 230v half way in between.

Cheers,  
Kim.

>Ok, I've got Morgan's contest files and Neil's updated guitar mic test files posted on the file vault site. Read Morgan's group post for info about the contest then go here and try your luck (or golden ears, which ever applies).

Find the files here:

[www.mercysakes.com](http://www.mercysakes.com)

Navigate to the PARIS file vault and click on the folder name you want to check out.

Thanks all,

TonyHi Kim,

I would almost certainly say your ups is reacting to over/under voltage

or line frequency

Does your ups have a serial connection or similar on the back as they often will hook to your computer for communication with my ups its hooked to serial port and when windows starts it allows me (thru software) to look at and config the ups it provides all kinds of meters for viewing mains in/out voltage, line frequency, ups output, bat voltage and all kinds in real time In your config you can set min/ max settings etc for everything if you live in an so so power aerea you may have to adj your min/max thresholds by a small amount . it doesnt harm your ups clicking on of (by the way that relay is your ups kicking in/out even though may not show batt light on ups as small surges arent long enough and often dont show on ups) but i relaxed by settings a little mainly cause the sound of the clicking annoyed me

Regards Craig  
"Kim" <

Could this be the battery starting to go bad, or something else?

I'm OK with this just as long as you make their posts editable by the users here without their knowing what is going on, This way, we can sneak over to the political group and have some fun..

Lots less than Sonic Solutions was though and it master better in many ways and has a sterling rep with classical people.

What impressed me as well was how good it was a basic tracking editing and mixing.

Playing Mr. Mom to my kids - I think I've got maybe three or four years  
before I become the "asshole"  
Camping with my family

More recording as an Engineer and as a drummer  
Playing more and writing tunes with friends  
Mixing more CD's and improving my craft  
and lastly let the small stuff slide cause it ain't worth the effort

Tell me more. I am not a big MIDI guy, but the stuff comes in and you have to be able to handle it.

Sequoia is not cheap, so knowing everything about it is essential before making the leap.

People who think that probably should be in a different business.

At trade shows SSC used to tell people "hey, just go listen to Pro Tools and then come back and listen to Paris, and you decide".

It was a pretty easy choice.

Sequoia is soo clean and deep on orchestras, I just love it.

BTW, Those guys have heard of the reputation for stellar sonics that Paris has and how you can push it so hard and it gets bigger. Paris is still held in quite high regard in this industry by people who can hear the difference.

Sequoia will \*not\* put up with being pushed like Paris, but it is so clean and clear that I can get that sound in other ways and use it as a near-perfect recorder/editor/mastering machine.

Love to hear about your present rig.

DCYeh mine doesn't sound like chirping. It's a defined relay click.

I checked the power in my outlet and it's sitting on about 244volts (supposed to be 240). I saw it go as high as 245. It floated down towards 243, and clicked, then went to 242, then back up to 243, then went to 244 and clicked

again, so I'm thinking the UPS is perhaps almost permanently lopping a few volts off the top. Every now and again the voltage drops almost down to 240 and the UPS switches to normal mode for a bit. I only looked at it for about 5 minutes, so I'll have another look over the next week or so and see if I can confirm this.

Cheers,  
Kim.

alive. ;o)

The clicking itself doesn't really matter. I haven't seen it effect anything,  
and it's not really a pain to have it click... I mean it's in the hall,  
so if I could stop it I will, but it hasn't been annoying me other than I  
don't know what it is for sure and would like to be sure it's safe. And if  
I can stop it clicking by making an adjustment I will.

Cheers,  
Kim.

>>Deej sent me some more files from "The Barefoot Hippies" sessions. They're up on [www.mercysakes.com](http://www.mercysakes.com) under the Doug Joyce folder. I'm having problems opening the .wma files, but maybe it's just cause I'm on these pesky Macs here at home. I get a message saying the file was ripped from a copyrighted source and I need to authorize it to be played on my machine.? If I hit the "authorize" button, I get an error page. I've got the latest version of Windows Media Player for the Mac installed, but they always lag a bit behind the Windows versions as far as compatibility and operation. Can anyone say Microsoft sabotage? Just kidding, I'm probably doing something wrong. Anyway, enjoy the files.

TonyHi Tony,

I've got the original Paris bouncdes of these on a hard drive. I'll look around and find them, convert the to MP3 and you can substituet them for these (((&^\*&^ .wma files. I'm not even sure how these got .wma'ed. It's a PITA, that's for sure.

it is amazing.

I have grown to exlusively using it for commercial and imaging work for my day job(radio)... mixes end up being open .. clear... ripe for some simple mastering with a waves L2 and a little other voodoo... an vioala!

it is simple, elegant, and just plain fantastic.

the learning curve is virtually non-existent...

I HIGHLY recommend it.

I still use Paris for music, but for everything else... it's done in Sequoia.

>  
><http://www.sequoiadigital.com> Sequoia is Samplitude's older brother - more extensive editing features, DSD support (I think), etc. As far as sound - the last time I did a mix comparison with Nuendo and Samplitude - they cancelled bit for bit. Some say Samplitude/Sequoia sound better, and at first I thought so too (i.e. influenced by the rumors), but couldn't find any technical test results to back it up (at least with Samplitude - they have the same audio engine as far as I can tell).

Samplitude is very nice for editing, I'm sure Sequoia is even better (I believe Sakis uses it). Workflow is good for audio tracking, editing and mixing, but MIDI is a bit convoluted and limited compared to other apps (Nuendo, Cubase, Logic, DP). I use Samplitude for CD mastering and love it. If you don't need MIDI, Sequoia/Samplitude should be high on the list.

For studios, music and post, don't rule out Nuendo which just added some of the best studio/control room monitoring features I've seen in a DAW (3.2) - truly killer - e.g. talkback, separate monitor mixes for musicians; separate monitor sends for multiple monitoring setups (5.1 vs. stereo/NFs, etc) and sends all configurable in the project; AFL/PFL listen; dim; inserts on studio/monitor sends (need to EQ the guitarist mix different from the monitor mix?); external sends, returns and device setups; fold-down (mono/stereo/5.1, etc); key command/MIDI controlled, etc. Nuendo is poised to run large post and music production facilities (esp. with the well-heeled

ID controller).

Depends on what you need - for mastering, Sequoia. For music production and post, Nuendo. (Sequoia seems like a great post app too though). Win-win either way really.

Just my .02.

Regards,  
Dedric

Heh, heh, heh!!!! Cool! I'd be interested to hear about this. I just bought  
a 3rd Midiman Digipatch unit. Stay tuned.

;o)Darn, and here I thought we were going to get to see some movies of real  
barefoot bluegrass pickin' hippies! ;>)

I don't know why I always assume video when I see .wma. Anyway, I'll be glad  
to swap them out when the new mp3's arrive.

Thanks,

Tony

ybridize this to allow some channels to remain digital. That is the next step.

Sequoia can handle any MIDI stuff that comes into a normal studio situation, but programs like DP and Logic have many more tricks and advanced MIDI features.

I like the extra power.

I understand that some VSTI issues still exist, but I could be a little out of date on this. Samplitude and Sequoia will continue to improve their MIDI features over time, and could eventually become my one-stop solution.

I have 2 issues with Nuendo.

1. Unless things have gotten a lot better recently, tech support is terrible...

2. I have sat down with it at trade shows twice and it sounded awful both times. Now there are dozens of reasons why this may be such as convertors, monitors, etc etc, but Paris always sounded great at shows, so it clearly can be done. I do not know whether the harshness I heard was the app or something else.

BTW, I bet the PT people can show you bit-for-bit cancellation tests with PT as well, and thereby "prove" that the mix buss sounds perfect.

But we know it doesn't, so the test is not telling us something.

Also, one big plus with Sequoia is Jeff Sheridan who will actually take time from a big project to talk tech with you. Priceless.
