longAnd I have to say... I got a free iPod touch (I gave it to
my wife) engraved with her name on the back, with the
Mac Pro.

You pay up front and get a rebate.

grrrrr...

You KNOW how that goes, and it usually involves many nasty phone calls and the presentation of various documents to various idiots and 6 mos. later you may get your check.

Nope. Just enter my Apple ID number on the website and they know what I bought and that I eligible. Punch a couple of buttons...

Rebate comes in 3 DAYS....

Yea for Apple customer service! 10 out of 10.

DCYeah, but why were you having ethernet trouble? ;-)

crusade to convert all the pc users to their more expensive solution only
for us pc users to not really give a shit.

to be fair i wish i started on a mac and paid the higher price but now i'm
married to microsoft apps and won't be changing over anytime soon. but it
was always funny how they were/are so passionate about a stupid computer.

I'm gonna convert you to my super zot 3 model toaster cuz all the other toasters
suck and if you don't buy into my toaster you're an idiot

Super Zot 3 rules !!!Actually it's better if everyone doesn't buy a single operating system.
Competition is good, and there's not much left.

Cheers,
-Jamie

>Super Zot 3 rules !!!Oh, you nailed that one. If one or the other OS had "won" by eliminating the
other, we'd be utterly hosed. The "other OS" is your best friend - or Macs
would still have one button mice and menus that won't stay down, and PCs
would still be copying and moving files from the command line.

If you will take notice, I didn't make the post, and I haven't started a thread on this subject in some time. If somebody else makes a post, then I think it's open to comment.

I take issue with the re-accounting of Mac user history in this case. One of the reasons Mac users evangelized the Mac, is because there was so much FUD about the Mac back then, and apparently there still is today.so who's feed the fire? "If somebody else makes a post, then I think it's open to comment. "

hilariousHey Mike,
Any chance of getting Paris to run on a Sinclair Z80???
I'd pony up!!
Kim

Who's we? About 40% or more of the NG uses Macs. I got a flying handjob once, which is better than a poke in the eye with a pointed stick but I suspect not as good as a flying fuck.

I use Windows, though, I'd bet Mac users get flying blowjobs, 'cause they're better.

----_linux4893affb--Hahaha. Very good, boys. Thanks for giving enough of an F'ing F to actually answer my question. :) And special thanks to KimW for giving us all a fucking fly.

Apparently Micro\$oft gives a flying fuck. Hey, maybe Micro\$oft will come up with a new business model where you have to rent not only the software, but the hardware too. More MS control!

http://www.appleinsider.com/articles/08/08/03/microsoft_10k_warns_of_iphone_mac_threats_as_iphone_nears_1_1_share.html Guys, my point was simply that we now know that Apple is not going away and that they continue to innovate, but mostly to tell a little story about my rockin' new overpriced Mac Pro.

NOT to start more of this...

Good grief...

DC

It will be my first attempt with XP/paris.

I have a Athlon(3 years old) with 2GB RAM.

just remove the REMOVE when answering the mail

Thanks!

JensHere's a good laugh for everyone.

<http://www.scrippsnews.com/node/40464>Damn, just set up this computer and posted to the wrong group. I'll repost this on the general group.

When both the Democrat and Republican presidential candidates recognize the science behind our current climate change event, it means the denial industry has to really crank up the volume in order to try to drown out the facts.

Cheers,
-Jamie
www.JamieKrutz.com

PS. Shouldn't this thread be in General?

And both are trilateralist in the pockets of the world bankers, and yes,
lets take it to the general NG.

The Paris implementation of OMF was floored.
Believe me, I tried, and tried, and tried, and
And even when you could get another program to read Paris OMF, it still
didn't provide track names etc...

in the main Paris app itself (like a .dll, ISTR???), if so,
wouldn't it be possible for that file extension to be re-written
so that it WOULD, in fact export properly?

>Lend An Ear SoundIn two words, probably not :-)

If you have the .dlls, but don't have the header files with the definition of the interfaces it's possible to dig in and reverse engineer the headers.
Work but doable.

If you have the headers, but the interfaces provided don't allow for the passing of the required information (for example track names, you are so as they say. The app was built against those interfaces, and that's not going to change.

If the interfaces that you manage to reverse engineer *do* allow for the passing of the required information, you are left to your own devices to provide a complete implementation of the interface.

Some would suggest that a reverse engineering of the *code* of the .dll, combined with the reverse engineered interfaces would give you a good start at the implementation of the interface. I would not agree, as the code ends up being too obtuse (or opaque if you will) and of course, as we know the implementation is flawed.

Then of course, you could do all this provided the interfaces *do* allow for the passing of the track name, and you reverse engineered and provided an implementation of the interfaces according to the header specification - you find out in a final moment of terror that the application proper is passing a null reference for the track name, and so on and so forth.

There is only one reason open source really works, there is source :-) If we had the source for the paris application a few years back (say 2003), we would be freaking light years ahead of reaper or any other open source project.

1.) It shouldn't... it's ID's intellectual property & they (meaning Edmund himself & SSC's estate, in whatever capacity they each own those rights) can elect to do with it whatever they wish, even if that includes burying it forever.

2.) On the other hand, why wouldn't they sell it if they don't plan on doing anything with it?

3.) If they WOULD consider selling it, what would they charge?

4.) Considering whatever amount they would want to charge, could

there be any profit to be made from it?

5.) Hardware-related issues abound... what would it be worth at this point, if the code is only a small part of the sonic equation? OR... is the code a bigger part of the equation? Thing is, nobody really knows.

Neil.....if the code is only a small part of the sonic
> equation? OR... is the code a bigger part of the equation?
> Thing is, nobody really knows.

ID knows, but they aren't talking about it. We have our educated guesses about that. The Native part of Ver 3 doesn't sound the same, sorry guys - and I know some ppl that would argue it.. but it just doesn't handle audio the same way... Unless they've found a way to faithfully mimic the hardware buses (ala mackie cut/gain structures, for one) it's probably nothin special - assuming they've kept coding the application. Knowing some things EP has done/talked about in the past and his love of it, I expect something has been kept in motio. Sonar, cubase, etc... will give it all a run and probably kill it these days, if it's even the same app. By now it should be fully native, and probably mac-centric though that means less and less as time marches since everyone moved to Intel based hardware.

The magic of paris lived too much in the hardware DSP (summing, latency, real time live plugs) IMHO. As much as I love my UAD the facts are that hardware just acts different. They have it REAL close though, and the gains are pretty incrementally small at this point, as well as the cost to amount of usable inserts is insanely in favor of software.

It looks like they're abusing the word "soon" again.
<http://www.intelligentdevices.com/index1.shtml>
http://www.intelligentdevices.com/pro_audio.shtml
How long's that been up there to check back often?

Neil: You're right, it is their intellectual property to do with as they please. I'm more saddened that they've stagnated the product than mad about it. Without taking out a mortgage on my home I was able to afford a stellar sounding audio DAW with a lot of tracks and use it for years. I can't be angry about that, really. And, to the inside of things let's be honest about it - they probably released ver 3 knowing the product was already dead in retrospect of events. So far ahead of it's time, but that time has passed them by for a variety of reasons.

What Kerry and crew are doing is great and really appreciated. It's extending our useful life from Paris, and that's pretty sweet. The thought of actually being able to put it in a quad core box in the future has me pretty giddy. My thoughts are, personally.... I prefer putting my energies there. It made sense to quit thinking about ID some time ago due to lack of

relevance to my needs.

I'm using paris with Paris hardware as a glorified summing/mixing box, and my guess is that the EDS cards always have had much to do with the "Paris sound". I think it's awesome that things are moving forward to be able to use paris hardware with native apps, but apart from session mobility and convenience, is there any sonic benefit to this?

Cheers,

TC

I don't know, but my thinking is that since they'll be tapping the Paris DSP/EDS cards that there probably is an advantage. I'm not sure of any of it obviously since Mike hasn't created (to my knowledge, though I'm not in the center of the data loop) any ASIO drivers yet. What I do understand is that they will connect into the new Paris EDS drivers layer and that's a big one for me..... onboard DSP has always been and still is IMO the way to low latency w/o wierdo ghosts in the machine. Tapping the EDS is still very much a smart thing to do even this far into the native years. I have dual and quad core machines..... Paris is still so much more solid feeling and constant in how it acts on a lowly AMD 1900+. If I can have that tied up through ASIO to a native app, man o man are we headed for fun times with very (if any) minimal hassles on our machines. Kinda like the old tape days when you just slapped it on the real and started dialing the mixer, it all just worked like it was supposed to.

What will, to me, be VERY interesting is to see if we can still have 24 and 16 bit files in the same project and how it sounds/ties into the EDS DSP:)

The guys at Reaper (Justin F in particular I am familiar with - no slights meant to anyone else there) have a lot of smarts, so it'll be pretty interesting times if we can get the open developers and the Reaper club into the paris thing. I think they'll pick up a lot of business if they pull it out with PAF and PPJ support and the ASIO driver does what I believe it will do.

One of the nicer things would be that you could now take a project portable for edits and show'n'tell type projects, or field work, using native Reaper to track/edit and when you cut the real deal to mixdown use the EDS DSP for the sonic improvement it imparts.

The other part of the equation, for me at least, is something Paris never could offer with it's application software. Midi that doesn't suck, and native borne instruments (DXi/VSTi).

submix feature :)

I didn't realize that this would mean that apps like Reaper would be
"tapping in" to the EDS cards. I've obviously been out of the loop with
what this means..

I guess I'm wondering to what degree this could be possible, and if this
would make it (Reaper/w Paris hw) fall somewhere between a dedicated dsp
system (Paris/PT), and a fully Native system?

I always thought it would just mean you'd be using your paris i/o as you
would any other native interface (m-audio etc). Part of this comes from
memories of the old ASIO driver we had for Paris back in the day..

Cheers,

TC

driver to
insert a layer connection and tap the EDS card on a much better level.
Details, I'm not sure on and I'd wait for him to elaborate on that
anyway..... it's dude's project :)
However, if I understand that all correctly it's big. Very big.

> I guess I'm wondering to what degree this could be possible, and if this

Personally, what I'm hoping for is a creamware type situation w/o the
hard-to-use SCOPE software. Disk streams, mix control, VSTi and GUI all
comes off the app, but the actual summing and Paris EQ's/EDS FX/latency and
I/O control DSP is slamming it on the PCI cards. With the Reaper
architecture, I could even see someone writing controls to use the Cs16's.

Perfect world man!

AAI don't want to get ahead of ourselves here. As far as the rewriting of the driver, I'm pretty sure
Mike's main priority has just been locking it down for multiprocessor CPUs ("just" - LOL, OK).

Mike and I have talked about the feasibility of a translation layer over PSCL that allowed Reaper
access to the hardware like the PARIS app has - it's a cool idea we've kicked around, but it's not
up to me to commit Mike by implication to a massive plan of action. I think we in the community
need to get some forward motion going that doesn't involve Mike just so he isn't carrying the
whole weight of the platform's future development on his shoulders.

Establishing a good solid working relationship with the Reaper developers with simple
collaborative projects like PAF support that we can tick off fairly easily is a great place to start right
now, and the more stuff we proactively tackle ourselves the more Mike can pursue PARIS-specific
angles he finds interesting.

We can talk about - well, to call it what it would be, "PARIS 4.0 = Reaper 4.0" - after we've
achieved paf and ppj support in Reaper so our stuff can talk to their stuff reliably, and hopefully at
some point some nice solid ASIO drivers so their stuff can talk to our stuff reliably Actually, as I
understand it Doug W's box would be capable of Paris AND
midi/HUI type control with moving faders. I am allllll for that.

just want to reiterate to the masses
the possibilities to get them all excited about support NOW so we can move
this direction :)

AaronChuck,

I am not sure if you remember me, Don Orason. Myself and Dave Goldwag
were local guys around Scotts Valley, CA where EMU is located.

Anyway, back in Pre- 3.0 Paris days, Dave and I were on the beta team
and were the only "real recording studio" guys on the team.

We sat in on most of the discussions that were held on a conference
call with Edmund for the development of Paris. EMU employees did not
really understand the product very much but Ed Rudnick and a few
others were totally behind it and wanted it to really become a
contender for Digi.

It appeared at that time that Edmund was totally behind the product,
even though he didn't listen to feature requests as well as he should
have...he had his own agenda.

In my opinion and from having an inside seat...the real problem was
Creative Labs they would not supply enough funds to keep Paris moving
forward...

That is my take...but it was a great time when we would all get
together and try get all the bugs worked out...Also, there was another
version that was created, I can't quite remember what was different
but I think Dave had a working version...from memory there was
definitely something cool about it...I think you (Chuck) heard or saw
this version...am I correct??

Well that's my 2 cents!

DonHeya Don! Welcome! Martin Harrington wrote on Mon, 16 March 2009 19:12 My point exactly,
see my previous post.

Fair enough observations. But starting from the guess that they're broken in some kind of fundamental way will mean we do nothing and get precisely jack shit. I'm working from the assumption that they're likely fundamentally OK, but were rushed out the door in such a hurry at the last moment that something minor and sloppy got missed that can potentially be compensated for on input (assuming a coder willing to work with us on the input end, which we now have).

I certainly may be wrong in that guess. I hope someone spends the half-hour needed to bounce out and upload an OMF to find out for sure. Here is the story

I also have an insider perspective, I believe the truth is Creative bought Ensoniq for their sound cards. They didn't care all that much about the rest of there products and they already owned EMU, so they handed EMU the Ensoniq line. The people in charge of EMU saw Ensoniq products as the competition, they thought Ensoniq products were inferior to EMU products and in their arrogance they wanted to kill everything Ensoniq. Scott Emmerman was in charge, he made the decision, HE wanted to kill Ensoniq, and he did. The problem was they were suppose to recoup some of the investment, and they were sitting on a ton of Ensoniq product, especially Paris. They wanted to keep on cashing in with Paris. In order to Keep on selling Paris they had to get people to think they were going to move forward with PARIS.

They never wanted to spend money on Paris, they just wanted to make a quick buck. When they got in the shipments of Paris hardware it was in pieces, they found that a bunch of it had not been painted yet, so they came up with the idea of Painting the hardware EMU blue. It became all part of the scam to make everyone think that they were serious about Paris, The truth is, the plan from day one was to liquidate the inventory. They also changed their name to EMU/Ensoniq to make people think they were serious. They told people that they were working on new hardware, I never saw anything. They even lied in press releases about capabilities to sell more Paris product. There were modules that Ensoniq was working on, but I have my doubts that EMU ever really had anything new under development. Here is a press release that we now know has falsehoods in it about development and support for third party motorized control surfaces.
http://namm.harmony-central.com/WNAMM01/article/EMU_ENSONIQ/ PARIS-Pro.html

The EMU guys despised Ensoniq products and said so, notice that they never put the Ensoniq name on any other product? Once the product was gone, Ensoniq

was gone. They changed their name back to EMU. When they got rid of enough of the Paris inventory, they were done signing contracts with ID. They blew out the last of the inventory. The EndWhen I was reading this article of (you are correct) lies, something funny struck me.

This group has supported and furthered the Paris platform longer than any of the manufacturers.

AAHello everyone (I still exist),

Don's post is basically correct so here is some of the "rest of the story".....The real energy behind Paris at EMU during this time was Kevin Monahan. I met him and volunteered my local studio to help with real life testing of Paris. I also began communicating with Brian Tankersly to try and connect the real world value of Paris to the marketing strategy at EMU. I ended up getting very deep into the politics of Paris/EMU as well as becoming more involved in the software testing (the Mac multiple MEC timeclock issues were discovered in a marathon test session in my studio). All of us worked hard (with Edmund) to try to convince EMU to put more resources into Paris but the complexity of trying to support the "outside" product within EMU proved too much. There are many sub-stories that occurred (including my on-going friendship with a number of Paris related people) and I have continued to lurk on the site. I still use Paris in my new studio (now located on the east coast in Ace Frehley's old "Ace in the Hole" studio) and am ever hopeful that Edmund will once again apply his many programming talents to audio.

Dave

And the irony of that is: It seems that even in the early days, it was the guys that just wanted to help move things forward with no significant financial benefit to themselves (or none at all) were doing so even then - as it is now, and in the more recent past with the "Chunkworx" stage... and it was those that could stand to make the most money from it (ID & CL/Emu/Ensoniq) were the ones that allowed their own agendas to cause it to tank.

Neilnah, no idea how much. Lost interest in that years ago.
