I've been keeping an eye on the above item. It may work with your situation pushing behind the audio monitors.

I would check it out at your local stores first so you could return it if it sucks.

Be sure and read through the Newegg.com reviews as there are a few tricks to get the proper settings through an on screen menu.

YMMV...

Regards,

El Miguel

sound modules that have DW quality drums and such where I can edit them (volumes/pans)
through midi and add sounds to them? Ideally I'd like a dozen different
kits with pro rock and jazz kits and a few kits with wacky sounds.

Also, what electronic drum kits are the best for realistic hi-hats?

the TD 20, ddrum etc are the top of the line (read \$\$\$\$) and the TD20 has room for dozens of kits so I'd start my search there...also look at the Roland pads they're not too shabby.

And DeeJ - Pierre at Hart is now recommending th new line of Roland drum triggers as the best on the market...in fact he raved about them

>Hi
No it is simpler !!

!> Put on aux 1 a compressor.
set on each audio track to use compression as prefader.
Put the fader all the way down.
Then from EDS plugins choose wire out and put that after compressor on next slot on aux.
Then choose any track in your submix and put a eds effect named "wire in"
Now you have the return of you aux1 on a paris audio track and can use eq fader automation tricks, whatever...
Remember to close the aux1 return knob !

Hope this helps,
Regards,
Dimitrios

>I was working on a project the other day and suddenly discovered that all of my eds effect presets were missing. What happened? I am running paris 3.0 on an XP machine. Someone please give me some direction or solutions. ThanksDimitrios, Happy Greek Weekend! Is this what you mean?

For example....If your audio is on channel 1
Put a compressor on aux1
Set channel 1 to send to aux1 pre-fader.
Put the fader all the way down on channel 1
From EDS plugins choose wire out on the next slot of aux1 below the compressor
On channel 2 add eds effect "wire in".
Now you have the return of your aux1 on paris audio channel 2
Remember to close the aux1 return knob.

Also, you can't automate EQ right?
Thanks,
John

Even opponents of cellular telephone usage by drivers acknowledge their utility in an emergency situation. Here are the state police / highway patrol telephone numbers by state. Law enforcement agencies urge motorists to use these numbers only to report accidents, emergencies, impaired drivers, reckless drivers, vehicle problems, hazardous material spills and criminal behavior. We urge drivers to be aware of using their cellular telephones in a safe manner and to be aware of laws which prohibit using their phones while driving.

The National government and many states have mandated that 911 work from your cellular telephone. According to many Cellular Providers, they are making strides to accomplish this. Fair warning - your cellular telephone may or may not work with the numbers below. We urge you to check with the local or state authorities, before you travel.

- Illinois 911, 511 or *999

I choose Polesoft Lockspam to fight spam, and you?
<http://www.polesoft.com/refer.html>Not so fast :)

My DM Pro allows me to purchase a blank 8 Mb card and load my own samples in it. If there is another hardware drum specific machine/unit that allows this I am not aware of it... with stuff out there like Drumagog I don't expect that to change. One could however, do what you're saying with the MPC and a drum trigger convertor.. which opens a whole world up. The closest thing to that I know of is the SPD series from Roland.

And yes, that was a good find on the roland kit John.

I choose Polesoft Lockspam to fight spam, and you?
<http://www.polesoft.com/refer.html>Hi,

I am pretty new to Paris, using it for about a year now and I love it. When I had problems or questions, I always found an answer in the NG archives. But this time I really need your advice because I'm out of ideas.

I've got this Gold Bundle from Kjaerhus and it works and sounds great with Wavelab. But on Paris the meters don't work and the parameters go back to default every time I pop it up during a session. Sonically it works: I can do changes which I can hear, but the next time I pop it up, all parameters are back to zero. Sonically the parameters are not affected, I still hear the same sound as I adjusted, but graphically all jumps back to default, and still no meter activity.

Does anybody has experience with this behavior or is someone successfully using these plugins with Paris?

I hope somebody can understand my problem, my english lessons are pretty far away...
I'm running Paris 3.0 under Win98.

Thanks Simonwell dave...if that's your real name...happy b sumnabeeeee

users also, and the wrapper resolved it in that case.

FXpansion is a good place to start. VST-DX Adapter versions 3 and 3.3 are
known to work well with Paris.. I think version 4 was a bust IIRC. You may
have to contact the developer directly to see about buying the older
version. I believe his name/spelling is Angus Hewlett, though I believe he
sold or licensed out the rights of use on it to Cakewalk last I'd heard.

You might find useful info here:

http://www.em411.com/show/interview/26/1/angus_f_hewlett_of_fxansion.html
If not, google on, I'm sure it's out there how to contact Angus. He's a cool
dude. You might get through at info@fxansion.com as well.

What? Dick Cheney wants us to listen to weird techno music?

Sarah Usually when things try so hard to be disturbing, they're kind of silly. I
suppose if it was really LOUD and I was 19 and on ecstasy, it might be just
thrilling. But since I'm 20 now . . .

>How's your theater? Any good shows recently?

Theatre is good, and busy.

Last two concerts rocked - Cathy Richardson (www.crband.com) and Jim Peterik (www.jimpeterik.com)

Working on a blues festival with some real, honest-to-God Chicago blues artists, plus a couple of names I could never get if I didn't know someone who knew someone....

Next up, we install the subwoofer and re-tweak the system, and I have to modularized my stage snake to make it a bit more flexible.

pabOk, now throw XP into the mix. are you using XP?

I found a pretty cheap magma, so things are looking good.

In my emu paris folder I have the paris_fx.var (default) file and another of the same, without the default. I am running paris 3.0 on an XP machine. Someone please give me some direction or solutions.

ThanksRichard,

Please contact me at animix@animas.net

thanks,

DJI may have made a discovery here. From the first day I began syncing Paris on one computer and RME cards on another, I experienced instability unless I first turned on all of my digital gadgets that are interfacing with whatever DAW, then booted the RME computer first and then launched Cubase SX before I launched Paris.

Well, it turns out that the Mytek clock that is sending to *everything* in the studio is *reclocked* by the RME card and so, apparently the digital inputs from the RME cards to the Paris cards may be different from the clock signal that Paris is sending from its outputs that are locked to the Mytek clock and sending to the RME digital inputs. For whatever reason, if the RME is booted first, it has a chance to not only reclock the Mytek WC that is feeding it, but also the Paris digital inputs that are feeding it.

Now.....if my thinking is correct on this, I'm wondering if I should even be using the Mytek at all. The specs on the Mytek (10ps) exceed the RME clock, but if the RME clock is diddling around with this house clock signal, it seems it would be a recipe for all sorts of mischief.

Any thoughts on this? Could I be correct here?cool shit...

and dudes laughing if it disturbs you... duh.

>For those who have never tried.

Just open a Native submix and put all your desired audiotracks that you would

like to process with a DX/VST/UAD1 effect like reverb.
Then just pull-up your aux list and chose your DX effect.
Paris EQ still works !! but uses cpu instead of dsp.
This is a great addon feature for Paris.
I will certainly use that a lot !

Regards,

DimitriosD...I think the auxes only work in mono on the native sub. It's been a long time since I tried it, so I may be remembering wrong.

>Dear Rod,

That is what I am hearing too...

But I overcome by using two auxes with same rverb and pan hard left and right.
Now on channels I put as much aux1 and aux2 I want to have the stereo I want.

Regards,

Dimitrios

I assume you do indeed have the Multiface driver settings set to "Auto-Sync", and not "Master"; and also you're selecting "Word Clock" as the sync option & not SPDIF or something else?

>That's a good point about the clock being booted first...
mine's on the same power conditioner as my PC, so whenever I
flip the switch on that, the clock automatically comes on before
the PC gets booted up.

However, there's been a couple of occasions where I've been
repatching some stuff & have knocked the power supply cable out
of the Lucid, and when I reinsert it, the RME card picks up the
clock signal again perfectly, so I suspect there might be
something else going on here. DeeJ, what version of the RME
driver are you using, and did you ever check to see what version
of the RME PCI card you have?

I use a Mytek 8X96 as house clock and I have three RME 9652 cards in my setup

order, but I have some latitude with it. I am only running two MECs on a three card Paris rig. It was adding the third MEC that gave me some consistency issues, so I went back to 98se and two MECs.

GeneThanks a lot so far! I think this is the solution, I will check it out soon.

I searched the archives of the NG about FXPansion and there was talking about latency with VST Wrappers. Do I now have to deal with latency compensation when using the Kjaerhus Plugins? They claim themself to be zero latency. And if yes, how much is the latency?

Thanks in advance!

Simon

and not the digital connection from the source device. Doing this,
the "leading edge" of each sample will arrive at every device at the
same time... you should not have any train wrecks do it this way.
There may be a few samples "delay" going from one device to another
(I/O delay) but the samples will be arriving at the same time (even
though some are delayed a bit).

David.

I can see a problem keeping a loying fan base if thats what the music inspires.

JMO.

dbglad you think so.....the music....well I think it sucks, but that's strictly personal opinion of the genre.I can certainly live with people having different preferences. It's the message of the music (screaming DIE!!! DIE!!!) along with the imagery that is sick and sad. I mean, when I was young, I got depressed sometimes when life seemed to be one giant suckage, but this looks like Columbine waiting to be revisited.

But hey.....it's a free country and it wouldn't be PC to deny someone the opportunity to slaughter themselves and their friends.

Anyone know of a decent DX or VST Subharmonic synth plug? Would be nice to find a freebee... need a "little somethin'" extra on a song I am mixing.

Thanks,

David.uh...I didn't get that memo...I usually always do it the other way 'round....let's see what the new plan hold in store....lol

>I spotted 3 of these already. The auctions are 1 day and they want money
by Western Union in ROMANIA !!! They were for the Roland TD20 \$5500 set
for \$1500. The auctions have been pulled but here's what the guy in Romania
emailed me. WILD !

<http://rafb.net/paste/results/ICz5eL18.html>The Yamaha DTXtremells also supports sample import
via smartmedia cards.

DDrum 4 supports one shot sampling import via MIDI.

DDrum 3 supports multi-layered sampling.

DDrum 5 should be something special in another year or three.

You don't necessarily need a dedicated computer to run Battery 2, BFD or
Superior.

BTW, Battery 2 lets import any .wav file or combination of files. You
can trigger them by velocity and even round robin left/right hits, it's
very flexible.

Cheers,

-Jamie

>>I just posted about this over at GS, I need some opinions from Paris users.
This is regarding a mix due today.

here is the scenario, I am running this mix through a pair of BAE 312's for some coloration, the thing sounds great perfect absolutely brilliant, don't touch a thing type or deal, however, as I was dumping the mix down, I noticed on snare hit clipping the 8in lights...just one snare hit in the whole song. Now I tried muting the snare tracks, and of course the clip lights did not fire.

So, I tried grouping the snare tracks and ducking them with automation, no good, even all the way down they still clip!

So the only way to avoid this is to back down the submix faders going into the 312's but I really feel this is diminishing the entire mix.

I want to know if it should just let it slide, as I can not hear it, and the mix sounds better over all left alone and hot.,

I do remember BT saying clipping the lights was ok on drums no?

Anyway, this track is maybe one of the coolest things I have ever worked on, to all or any of you Clash fans out there, this is gonna blow your minds (i hope!)

So thanks for the help.Red means on... ;-) Does it sound good? if so, who cares about the odd channel clip... I know I don't.

David.

I saw these guys live in Chicago back in November, and it was really amazing. They continue to be one of the tightest bands out there. They certainly had a couple of rough records of late (Manic Moonlight, Tape Head), but I thought their most recent (Ogre Tones) was a step back in the right direction.

Anyway, I'm hoping they keep putting out records. Not sure what I'd do without King's X around...

t synced to Paris ADAT), you will need to buy the WC daughtercard for = it.

Thanks,
Tom

Be usre that any RME interface you buy has the *HDSP* = designation.....not the "Digi" designation. The "Digi" series is older = and does not sync reliably to Paris ADAT.

Good luck,

Deej

Tom, answers below:

"Tom Bruhl" <arpeggio@comcast.net> wrote in message =
news:44750054\$1@linux...

Well I just read that the Cubase plugin is a SMPTE generator not a
reader. From what I can tell ADAT sync (from Paris using XP?)
or MTC are my only options.

I figured I'd end up with the RME HDSP 5692 card in the end.

Resistance is futile

Will Paris using XP be able to send ADAT sync to this card =
successfully?

Yes. always

I understand the Paris ADAT sync using XP doesn't work with an ADAT =
tape machine
but will it work with the RME this way?

Yes. It will work. I've personally done it with Paris on XP.=20

If so then I guess I have to buy that RME card now. Are there any =
other cards that=20

are better for this application?=20

Do you really need 24 ADAT I/O? The HDSP 9632 should work well for =
this. Also the HDSP PCI with a Multiface (v1) or Digiface breakout box =
will work. I have synced the Multiface (v1) to Paris with no problems. =
Multiface v2 doesn't have ADAT input so avoid that one.

I do need the MIDI, ADAT and MTC or ADAT sync anyway.
