David,
You should go into business. That looks great!

> Wow. Tell me more about this. What do you see as lacking for

> composing? MIDI implementation? Notation?

I haven't worked much with Samplitude 8, and midi is improved there, but things that haven't improved are how Samplitude assigns VSTi's and midi channels. It feels like it is almost there, but is convoluted unnecessarily. For one - midi track monitoring is limited (compared to Nuendo, SX, Logic, etc) - esp. punch in record (though an improvement there is on the 8.21 update list, so it may work now). I haven't used it in months so I'll have to get back to you on specifics there, but I do recall having to assign a new track to overdub a midi track, and reassign the old one since Samplitude couldn't play two tracks to the same midi channel at the same time (layering was also a no go, but this all may be fixed in v8).

It sounds like you don't need notation - Samplitude doesn't have any.

The piano roll/key editor does seem good - not as powerful as Nuendo/Cubase, but you have access to all controllers there. Quantization, as I recall, was more limited, and there were limited options for transforming midi parts - for simplicity, esp. with large scores, I like to use transforms to et, for example, a max velocity or max cc message for sample sets that have a unique sample at 127, or use parabolic curves for volume changes that manual controllers often wobble through (regardless of the player's steadiness).

The general feel of Samplitude to me was - great for audio, but working with midi feels like midi in an audio app, rather than a balanced mix between the two. It may work very well for you though, esp. given what you are describing about your songwriting approach, and v8.x may have significantly improved midi. I came from Logic, so I am used to a high degree of flexibility and programmability in midi.

<http://www.toonedin.com/movies/WhiteTrashXmas.html>It's a scam.....

I was getting ready to buy it until I read further and saw this:

"THIS AUCTION IS FOR A DEPOSIT OF 50% OF THE PURCHASE PRICE OF
\$168,000,000.00 TOTAL. CUSTOM BUILD. DELIVERY IN 2007"

No way I would pay over \$100 mil for this POS.

;o)

r />
uhhh YEAH, I'll be right there. Got some cool old Altec tube gear
and a big old JBL corner-style horn loaded speaker too.

I just can't use 2 leslies and my other one is way cooler, so out
it goes.

DC This is the most ugly, uninspired and anorganized console I ever saw...
Now just reverse the above and you got something really terrific.
Congrats for your aestehitics !
Regards and Happy Thanksgiving to all you Parisians...
Dimitrios

Yes.. My other one is a blonde 1952 with upgraded motors and a Renkus HF driver and a EV for the bottom. Recently a client gave me a Peavey speaker manager so I biamped it using a great old Altec stereo tube amp and a Summit mic pre as a front end for guitar. I spent hours with the crossover point, slope and EQ and I think I found the last 10%.

And you know what? I think my Yamaha UD-Stomp sounds better...

(yipes, did I say that??)

Yes folks, for that big rotary sound, the chips beat the rotors...

What a world... Oh, no, I'm melting, look what you've done!!

heh heh

DCHer comes the wonderful Chainer wrapper to the rescue.
You can use any compressor (except for the oines that introduce latency like UAD1).
Most compressors out there including the free ones I have posted are 0 latency like TC works mda and others.
Chainer has a great option , wet and dry volume !
With wet volume you hear only the sound after the vst plugin and with dry volume you hear the sound just before the vst effect.
So having dry at 99 volume you can put a vst compressor hitting really hard and just raise the wet volume until you achieve the desired effect.
While compressors use very low cpu you can use the same compressor on every drumtrack opening chainer on every drum track and have sort of what we call buss compressing.

>While the tracks themselves are 16 bit, all processing is done at full internal resolution. Then, when you bounce to disc, set the project bit depth to 24 and you will get a full 24 bits for your mix.

This file can then be mastered, dithered and put to CD.

If you are doing more open, airy type music, you may want to track at

24 bit. Even using the on-board A/D, you will get 24 bit files with 20 bits of resolution... still better than 16.

Personally, I track everything at 16 also with very good results. Why waste the drive space if it's not needed.

Alternately, as you suggested, an outboard A/D can be SPDIF'd into Paris for full 24 bit rez recording.

David.

With Community speakers, that's all in one box...just overdrive the speakers (easy to do) and the overdrive warning lights will come on :-).

Many, many, many, many, many, many, many, many, many years ago I did FOH work including quite a few gigs with all CLS rigs. Leviathans, LMFs (round not rectangular) and a variety of HF horns from Community.

I have great stories about some of these gigs, like Hot Tuna at The Academy Of Music on 14th St, NYC.

Not for public forums!

Gene
P.S.

then it's all good--bits at that point don't matter to me :)
