Can I download the source to Safari? Of course not, Apple uses very specific pieces of K code licensed under the LGPL and locks the rest behind a vault. Some code is merged back into the K tree but most is not. So if the security problems are in Apple's code only Apple can fix it.

>Apple has already shipped internet software for MSWindows: iTunes. Not

A media player ain't a web browser, even if it does connect to a network.

>The MSWindows release of Safari is a beta release, which means it is
>not assumed to be production ready. Use at your own risk.

Which is precisely what I said in my first post, probably best to wait. And btw, I don't think beta software has a right to have massive security problems. Bugs, crashes, trouble with odd hardware is one thing, code injection, stack overflows and such are very different.

>The guy reporting the problems discussed at slashdot declined to report
>them to Apple. He's being criticized for that, but whatever.

Which has nothing to do with whether it's a good idea to use an insecure browser. Personally I don't think people who discover bugs in proprietary software are bound to reveal them, I think it's a good idea in most cases, but I don't think it's compelling.

>As beta problems ARE reported, the expectation (of a normal development

I wasn't bashing away at anything. Every piece of Apple software for Windows I've ever dealt with has had major growing pains. The first version of quicktime, the first version of itun

es, and so on. In those situations, it was just bad software that crashed a lot, and they eventually fixed thing. I have itunes on one of my XP machines for the internet radio. But a browser is one of the preferred ways for crackers to do really, really bad things to a machine without the user doing anything especially stupid. So I was warning people that within hours of the beta being out there some really serious problems were coming up. I also suggested that for people who don't want to use IE (which I applaud) and for some reason don't want to use firefox, Opera is an excellent alternative.

If so, presumably they will fix it, in due course, during the beta phase.

I didn't make that claim. I said it's internet software, which it is.

Having been in my share of development cycles, beta software knows no "rights" when it comes to wrongs. :^)

But if you want to criticize Apple's in-house alpha cycle for not catching enough stuff, that's fine.

And if you want to use the stock "security through obscurity" claim in every Apple thread, that's fine, too. Although it ignores some of Apple's actual security efforts and glosses over their rather impressive results with a vague wave of the hand.

- >> The guy reporting the problems discussed at slashdot declined to report

Like I said, he has his reasons so whatever. I didn't criticize him but some of the folks on slashdot got on his case about it.

I figure someone will report it along with other bugs. It's early in the beta, a lot of people are using the software and some of them are making the effort to report bugs.

>> As beta problems ARE reported, the expectation (of a normal development cycle) is that they will be addressed by Apple before th

>

> I wasn't bashing away at anything.

I'm not referring to bashing away at Apple. What I mean is: bash away at the software. It's a beta, that's what it's for. If anyone wants to test it, test it. Put it through its paces, do your worst, and when you find a problem that you would like to see fixed, report it.

> Every piece of Apple software for Windows

> I've ever dealt with has had major growing pains. The first version if quicktime,

> the first version if itunes, and so on.

Maybe that's why they released this one as a beta FIRST, to give you or others a chance to find problems BEFORE releasing a dot zero version.

> In those situations, it was just

> bad software that crashed a lot, and they eventually fixed thing.

Bad is bad. Fixed is good. :^)

> I have

> itunes on one of my XP machines for the internet radio. But a browser is

Good advice. Firefox is a great choice on either platform, and free. I run it along with Safari on OSX. I haven't used Opera but those guys are no slouches.

My advice is to use the beta of Safari on MSWindows only if you don't mind risking a beta version on your system, but to wait if you do mind the risks. Standard advice for a beta.

Our advice is not far apart.

Give Sarah a break. It's not her fault. It's all those time
signatures.....

;o)Hey peeps,

You, know, I'm really liking the DM3200 with Cubase 4
though James was absolutely right about the learning curve
when he advised me to give it 30 days with the
manual.

My only prob is that, with my day job, that month almost
literally becomes a month of Sundays!!!!

Anyway I have to say that Tascam has done a really
good job with the new MKII firewire card. It makes the boardd work really
well as a controller and actually sounds better than I had expected. The
guys at the DM3200/4800 forum are
helpul, good guys too. There's some useful info there. Can't comment on the
mic pre's yet cause I haven't done any "live" tracking yet.

In a nutshell, while I lament the fact that no one picked
up the Paris banner and kept it a current, valid tool,
I've seen enough to decide I'm committed to this new set-up for a while.
Ton's of potential here especially if I am able to take the time to learn
everything on the board as well as
deepening my Cubase chops.

I'm keeping a minimal PARIS rig to experiment with as a stereo summing buss. I haven't heard the new rig that way yet though so I'll let you know when I get there. (On that note I'm probably going to need to get a word clock. Is the little Hosa WDC427 worth bothering with? Don't have much left to spend)

I still have a KSP8 and BFD to learn and I think the whole purpose of all this stuff is to actually track and finish some tunes so I'm trying to curtail the usual time doing the gear-head, noodle yanking, gear lust thing I'm prone to and actually get a project done with what I have.

Anyway, just wanted to give you guys an update and BTW a fair portion of my Paris rig is for sale (See my FS post).

Arriva Dishrag,

I think I read a post here from you recently that you're running BFD and GS3 on seperate boxes from your main DAW.

I've got both programs and some extra machines here so I'm thinking about doing the same thing. What's your approach? FX teleport, soundcards on each machine, rewire, vsti system link (or whatever Steinberg calls it), etc, yada yada, yada?

Thanks much,
Jon

Dale,
I 'heard' that the reverbs were the same as the KSP8.
I don't know that for a fact though.

-----=_NextPart_000_00FF_01C7ADF1.E3ED1EC0--Hi Jon,

Well my approach is pretty simple..I treat each vsti PC as a midi module rack..That is:

- Vst PC1 Runs Vstack-Synths
- Vst PC2.Runs Drums (BFD,DKFH-CV,Stylus RMX, BatteryAll connected to a

Motu 8x8 midi patch bay

- Vst PC3 Runs Proteus X...var
- Giga PCStrings .Giga Libs
- All PCs except one have the M-Audio Audiophile 192 card and the Giga PC use the RME Digi 96 PST...

All Vsti & Giga PC are patched into a mackie 1620 Onyx mixer.....then...Firewire into My Main Recording DAW.....

* All midi modules are connect to Midi patchbays...

I'm not sure if Netscape works the same way, but if you hold down "shift" and hit reload, it should force it to pull from the site and not from local cache.

pabHey Jon..!!!

That's good news. .I've been on the fence contemplating on getting into a Digital mixer with Nuendo and Pro Tools..mainly the DM 2000, but as James and many others have stated, (2) DM4800 comes out to under 10k...

I had a chance to demo one last year Dm3200 and like the DM24, I was very impressed with it's sound quality and all around functionality.. Impressed!!

Ouch removing AOL and or Norton products can be the most dangerous things you could ever do on a PC, especially if they are older versions. :)
Could be a virus or possibly a bad drive. You might want to boot into safe mode and do a full virus scan before attach that firewire drive.
If you don't have access to any drive imaging software you can always do a windows repair install. It won't totally make you system perfect but will make it usable enough to back up your personal data.
You will need your windows install disk and product key.
Before you do that you should put the disk in and go to recovery console and do a full chkdsk for bad sectors before you try to install windows.If the drive does have bad sectors don't try to install windows.
Go buy a new hard drive and a copy of Acronis True Image Home 10. You shouldn't use the bad drive till you use Acronis to make an image of it.

Content-Transfer-Encoding: quoted-printable

I have a five card, XP, 2 x MEC, 1 x 442 and a Lucid Word clock =
generator

that won't play nice. It was odd to begin with in that the WC cables had to run in series from the Lucid to Mec A then Mec E in a simpler configuration. David gave me that advise since he owns the same mobo=20 and hardware as I. =20

Symptoms:

It will play back projects in parallel wc mode with all five cards = active. Bad news is it=20 won't allow any inputs except the first 16 on MEC A. All the others = never show up in the=20 meters although their associated input lights on the modules light up. =20

When wc is in series I lose the EDS cards that are in between A and E = (B, C & D) so no audio=20 plays off those cards but all hardware inputs work and print ! Huh? = This is with or without UseHouseSync=3D1 in the Paris config, with/without termination and I = tried a multitude of=20 combinations of Mecs and 442s connected to different cards. Well, all = but the 442 on Mec A=20 which is unacceptable anyway. It seems to like the 442 last in line = with card E.

I'm at a loss for a solution at this time. Any suggestions? I'm = thinking another Mec instead=20 of the 442 is all I can do. I plan to have four Mecs in total if I can = get three going successfully.

I know Dimitrios was all over this months ago. He suggested Mecs = instead of 442s. Anyone else?

TIA,
Tom

-----=_NextPart_000_004F_01C7AE29.A16D5E60--Tom,

I had issues with the "never appearing audio" on my system but it's been pretty stable now. It's a four card 2X442 1X MEC system connected to a Lucid GenX6. Connects for Paris cards are as follows:

A-442
B-442
C-None
D-Mec

The only thing consistent was no consistency. Per Dimitrios, uninstalled and reinstalled Paris right off the root (c:\ParisPro). Then terminated all interfaces. Finally, per DJ, tried all matching length word clock cables. I already had the default project at 48K (another per DJ).

ONce all this was in place, it has been much more stable again with all inputs working and showing.

Hope this helps,

Jeff

I had the same problem running three MECs and a 442. Losing the 442 in = favor of another MEC solved the problem.....prbably because Paris = likes to see a clock signal on all interfaces when it boots, at least = with mine, this seemed to be the case. The 442 is not able to see a = clock signal until after it initializes which is during bootup so it's = not syncing at the same time as the other devices. Also, with my = system, each MEC was being sent a separate clock feed from the GenX6, = not daisy chained.=20

Try this:

1. Turn on WC (set it to 44.1 if that's what you use for = tracking/mixing).
2. Turn on any other devices that are interfacing with the WC (including = MECs-obviously you can't do this with a 442 since it gets it's power = from the computer-which, as stated above, may be the problem)
3. Boot PC
4. Launch Windows
3. Go to Paris folder in your Program Files and launch Paris.exe from = that folder
5. Set project to 48KHz (very important that the default project.ppj be = set to 48KHz), sync source external, save project under the name = "default project" (no quotes) to your Paris directory in the program = files folder and save it again under the same name to your desktop.
6. Close Paris
7. Reboot computer

Launch Paris from the desktop "default project.ppj". I've still got that = MEC here if you want to give it a try. The reason I was using a 4 MEC = system is because 3 x MECS and a 442 never did work reliably for me.

I have a five card, XP, 2 x MEC, 1 x 442 and a Lucid Word clock =
generator

that won't play nice. It was odd to begin with in that the WC cables
had to run in series from the Lucid to Mec A then Mec E in a simpler
configuration. David gave me that advise since he owns the same mobo=20
and hardware as I. =20

Symptoms:

It will play back projects in parallel wc mode with all five cards = active. Bad news is it=20

won't allow any inputs except the first 16 on MEC A. All the others = never show up in the=20

meters although their associated input lights on the modules light up. = =20

When wc is in series I lose the EDS cards that are in between A and E = (B, C & D) so no audio=20

plays off those cards but all hardware inputs work and print ! Huh? = This is with or without

UseHouseSync=3D1 in the Paris config, with/without termination and I = tried a multitude of=20

combinations of Mecs and 442s connected to different cards. Well, all = but the 442 on Mec A=20

which is unacceptable anyway. It seems to like the 442 last in line = with card E.

I'm at a loss for a solution at this time. Any suggestions? I'm = thinking another Mec instead=20

of the 442 is all I can do. I plan to have four Mecs in total if I = can get three going successfully.

I know Dimitrios was all over this months ago. He suggested Mecs = instead of 442s.

Anyone else?

TIA,

Tom

"major".....and some of them on't give a major **** about it either. Don;t
let this get you down man. It's good that you care. Keep learning. One thing
I've learned about tracking to Cubase and my RME converters is that the
system seems to behave very differently from Paris and for whatever reason,
I have more clipping (and other strangeness) issues. for some reason, Paris
seemed to be more forgiving while tracking (or I just knew my calibration
levels a bit better relative to certain preamp gain setting that I used
regularly enough to be familiar with that didn't work the same with the RME
converters)

Thanks guys. I will give your suggestions a try. I do have equal length WC cables.
I will need that MEC Deej. Let me trouble shoot a little more just to see if anything helps my situation. Maybe even today if I can finish the 1,000 things in front of that=20
that I have to do.

Thanks tons,
Tom

"DJ" <www.aarrrrggghhh!!!.com> wrote in message news:46713b25@linux...
I had the same problem running three MECs and a 442. Losing the 442 in favor of another MEC solved the problem.....prbably because Paris likes to see a clock signal on all interfaces when it boots, at least with mine, this seemed to be the case. The 442 is not able to see a clock signal until after it initializes which is during bootup so it's not siyncing at the same time as the other devices. Also, with my system, each MEC was being sent a separate clock feed from the GenX6, not daisy chained.=20

Try this:

1. Turn on WC (set it to 44.1 if that's what you use for tracking/mixing).
2. Turn on any other devices that are interfacing with the WC (including MECs-obviously you can't do this with a 442 since it gets its power from the computer-which, as stated above, may be the problem)
3. Boot PC
4. Launch Windows
3. Go to Paris folder in your Program Files and launch Paris.exe from that folder
5. Set project to 48KHz (very important that the default project.ppj be set to 48KHz), sync source external, save project under the name "default project" (no quotes) to your Paris directory in the program files folder and save it again under the same name to your desktop.
6. Close Paris
7. Reboot computer

Launch Paris from the desktop "default project.ppj". I've still got that MEC here if you want to give it a try. The reason I was using a 4 MEC system is because 3 x MECS and a 442 never did work reliably for me.

Deej

"Tom Bruhl" <arpeggio@comcast.net> wrote in message =
news:4670de3c\$1@linux...

I have a five card, XP, 2 x MEC, 1 x 442 and a Lucid Word clock =
generator

that won't play nice. It was odd to begin with in that the WC =
cables

had to run in series from the Lucid to Mec A then Mec E in a simpler
configuration. David gave me that advise since he owns the same =
mobo=20

and hardware as I. =20

Symptoms:

It will play back projects in parallel wc mode with all five cards =
active. Bad news is it=20

won't allow any inputs except the first 16 on MEC A. All the others =
never show up in the=20

meters although their associated input lights on the modules light =
up. =20

When wc is in series I lose the EDS cards that are in between A and =
E (B, C & D) so no audio=20

plays off those cards but all hardware inputs work and print ! Huh? =

This is with or without

UseHouseSync=3D1 in the Paris config, with/without termination and I =
tried a multitude of=20

combinations of Mecs and 442s connected to different cards. Well, =
all but the 442 on Mec A=20

which is unacceptable anyway. It seems to like the 442 last in line =
with card E.

I'm at a loss for a solution at this time. Any suggestions? I'm =
thinking another Mec instead=20

of the 442 is all I can do. I plan to have four Mecs in total if I =
can get three going successfully.

I know Dimitrios was all over this months ago. He suggested Mecs =
instead of 442s.

Anyone else?

TIA,
Tom

laptop drive.
Pull your hard drive data to a safe location so you can tinker. Put the
drive back in the laptop, and do a safe mode reboot. Schedule a scandisk,
reboot and let it run. Do a reg check also.

..357 optional post data backup.

appropriate USB case for
your interface. it will be a 2.5" drive, not a 3.5".

Why, I believe it is. Bring that Mexican coke w/you. I'll call Fuji here in Tulsa, when you comin' down? :)

>

> Is there a special case for the small laptop drives?

yup. See second post my friend - even gave ya a link to go to. If you think you'll be tracking any on this machine, do yourself a huge favor.... go get a 7200 RPM Seagate. I bought one a few months ago and at a dollar a GIG it's a whopping deal for doing audio.

What model is the laptop? Can probably check product support at Gateway
and determine what kind of drive it is.

I bought one of the 2.5" externals and pulled the drive, put it into a
laptop and reinstalled software, then put the original drive into the
external housing and copied files over. Worked pretty clean.

with it!

I forgot to mention that Tascam's support can be good, bad or just downright
lame depending on what day it is and how lucky you are but the folks at the
user forum are helpful and most of them are using it with Cubase or other
DAWS.

In general though Tascam seems to have gotten it right. The learning curve
(for me anyway) has indeed been (and continues to be) steep but the overall
flexibility once you get there makes it a really good value... I think anyway!
I also haven't even played with any of the effects yet.

Cheers,
Jon

Man, I didn't even think about that one, LOL. Need..... sleep..... (or
coffee, whichever is more available)

Yup. Coca Cola with real sugar, not the cheapo syrup substitute we get with
"USA" Coca Cola..

The only white powdery substance I mess around with is Sweet'n'Low or flour
if I'm cooking. Occasionally, baking soda but I try to stay away from that

hard stuff :)

-----=_NextPart_000_02AD_01C7AE68.6FB80070--Try putting the 442 on the A card and the MEC's on the last two cards.

You will need the house sync line for 3 + interfaces, and run separate equal length WC cables to each interface. In the grand scheme of things it doesn't matter where the interfaces plug in, as you can re-arrange them in software.

David.

Content-Type: text/plain;
charset="iso-8859-1"

Content-Transfer-Encoding: quoted-printable

No problem/no rush Tom. I just hope you get this sussed one way or =
another. I know from experience how frustrating this can be.

;o)

"Tom Bruhl" <arpeggio@comcast.net> wrote in message =
news:46715169@linux...

Thanks guys. I will give your suggestions a try. I do have equal =
length WC cables.

I will need that MEC DeeJ. Let me trouble shoot a little more just to =
see if anything

helps my situation. Maybe even today if I can finish the 1,000 things =
in front of that=20
that I have to do.

Thanks tons,
Tom

"DJ" <www.aarrrrggghhh!!!.com> wrote in message =
news:46713b25@linux...

I had the same problem running three MECs and a 442. Losing the 442 =
in favor of another MEC solved the problem.....prbably because Paris =
likes to see a clock signal on all interfaces when it boots, at least =
with mine, this seemed to be the case. The 442 is not able to see a =
clock signal until after it initializes which is during bootup so it's =
not syncing at the same time as the other devices. Also, with my =
system, each MEC was being sent a separate clock feed from the GenX6, =
not daisy chained.=20

Try this:

1. Turn on WC (set it to 44.1 if that's what you use for =
tracking/mixing).

2. Turn on any other devices that are interfacing with the WC =
(including MECs-obviously you can't do this with a 442 since it gets =

it's power from the computer-which, as stated above, may be the problem)

3. Boot PC

4. Launch Windows

3. Go to Paris folder in your Program Files and launch Paris.exe =
from that folder

5. Set project to 48KHz (very important that the default project.ppj =
be set to 48KHz), sync source external, save project under the name =
"default project" (no quotes) to your Paris directory in the program =
files folder and save it again under the same name to your desktop.

6. Close Paris

7. Reboot computer

Launch Paris from the desktop "default project.ppj". I've still got =
that MEC here if you want to give it a try. The reason I was using a 4 =
MEC system is because 3 x MECS and a 442 never did work reliably for me.

Deej

"Tom Bruhl" <arpeggio@comcast.net> wrote in message =
news:4670de3c\$1@linux...

I have a five card, XP, 2 x MEC, 1 x 442 and a Lucid Word clock =
generator

that won't play nice. It was odd to begin with in that the WC =
cables

had to run in series from the Lucid to Mec A then Mec E in a =
simpler

configuration. David gave me that advise since he owns the same =
mobo=20

and hardware as I. =20

Symptoms:

It will play back projects in parallel wc mode with all five cards =
active. Bad news is it=20

won't allow any inputs except the first 16 on MEC A. All the =
others never show up in the=20

meters although their associated input lights on the modules light =
up. =20

When wc is in series I lose the EDS cards that are in between A =
and E (B, C & D) so no audio=20

plays off those cards but all hardware inputs work and print ! =
Huh? This is with or without

UseHouseSync=3D1 in the Paris config, with/without termination and =
I tried a multitude of=20

combinations of Mecs and 442s connected to different cards. Well, =

all but the 442 on Mec A=20

which is unacceptable anyway. It seems to like the 442 last in =
line with card E.

I'm at a loss for a solution at this time. Any suggestions? I'm =
thinking another Mec instead=20

of the 442 is all I can do. I plan to have four Mecs in total if =
I can get three going successfully.

I know Dimitrios was all over this months ago. He suggested Mecs =
instead of 442s.

Anyone else?

TIA,
Tom

I choose Polesoft Lockspam to fight spam, and you?

I've always been happy with the sound & performance of my RME Multifaces, and I recently picked up a MOTU 8-Pre, and although I'm not using it as an interface, so I can't speak for the drivers (I just using it as a stand-alone preamp for tom mics so far, lightpiping the signals out to one of the Multifaces), I can say that for \$549, it's a bargain for a bank of eight of what so far seem to be pretty darn decent, good clean preamps.

Yeah my 8 pre is the basis of my system.
I havn't had any real issues with it.
I use the Presonus as a preamp 8 channel extension lightpiped and slaved
to the 8pre. I rarely use the 8pre ins since they are located on the =
back and=20
less easy to get to.
Presonus is better designed for lazy people like me.

--=20
Thanks,

David,

I guess this a really dumb question but can I do what you said and =
rename

the Master as card D? I've never ever tried that. . . If so, I can =
retain the
24bit outs for monitoring. That would solve alot if not all of the =
problems.

Thanks,

Tom

PS 2 lines from last entry in Paris.cfg UseHouseSync=3D1 =20

RIGHT?

I use WordPad to add and save.

"EK Sound" <askme@nospam.com> wrote in message =

news:467156c5\$1@linux...

Try putting the 442 on the A card and the MEC's on the last two cards. =

You will need the house sync line for 3 + interfaces, and run=20
seperate equal length WC cables to each interface. In the grand scheme =

of things it doesn't matter where the interfaces plug in, as you can=20
re-arrange them in software.

David.

Tom Bruhl wrote:

> Thanks guys. I will give your suggestions a try. I do have equal=20

-----=_NextPart_000_00CA_01C7AE85.3DF0C0A0--My primary guitar is a tele style with a mini humbucker in front, a strat pup in the middle, and a tele in the bridge...a dedicated volume knob controls the mid pup - think Brent Mason's guitar, but with Duncan Nashvilles in middle and rear, and a Firebird (not Les Paul) pup in front...

Goes from hillbilly heaven to smooth and clean jazz with the flick of a switch...The same configuration is available from Valley Arts Guitars (Brent Mason Signature model) or take an off the shelf Nashville Tele, put in the middle pup volume knob and drop any number of single coil sized humbuckers in front, and there ya go.

"John" <no@no.com> wrote:

>Any suggestions on a single electric guitar that can do Strat / Les Paul
/

>Telecaster sounds or some other guitar that has an amazing array of these
>type sounds?I think it's fair to say that the Line 6 Variax (500, 300 and 700) have
the most amazing breadth of guitar sounds in one instrument. Including
presets for those you desire. You can even customize the emulations via
their Workbench software.

PRS and Parker are have pickup combinations that cover a lot of territory. Works for me for strat and LP. Some Ibanez models also do very well, and there are others with humbucking/split coil options that would work fine, too.

Cheers,
-Jamie

John wrote:

> Any suggestions on a single electric guitar that can do Strat / Les Paul /
> Telecaster sounds or some other guitar that has an amazing array of these
> type sounds? Are you concerned about neck length/style? If not, I'd get a LesPaul and put
separate coil tappable humbuckers in it. I have a GoldTop with this set up
and it's got a VERY wide range of sounds. If you don't mind emulations,

Variax would be another option.

In place of the normal Strat tone controls, the DG-20 has a bass/treble booster and a midrange booster.

Super-jangly Strat sounds (bass/treble booster up) or thick LP-type tones (bass/treble booster down & midrange boost up) + everything in-between!

I love it!

<http://www.macworld.com/news/2007/06/14/safari/index.php>

Good show for them.

TCBHey Paul-

I'm actually in Scotts Valley, CA. So a personal demo isn't possible, but I would highly recommend lurking at the DM-3200/4800 forum a bit:

<http://tascamforums.com/index.php?showforum=45>

There's also a DVD available there from a guy named Mike Farrow that gives a pretty decent tour of the board. Not as entertaining as Aaron and BT's Paris DVD:) ... but useful for getting a lay of the land with the DM-3200 (albeit with a HD recorder as opposed to a DAW.) I bought it before I bought the board.

There's also a lot to be learned from all of documentation posted there (and at the main Tascam site). I read all the stuff that applied to my scenario and downloaded the manual before I made the plunge. I think I saw a couple of posts regarding how it's being integrated with Sonar BTW.

Best of luck and please be sure to share your experiences if you do take the leap.

Cheers,
Jon

guitar do a lot of tricks
w/ a minimum of switching. I installed it on my old PRS Custom 24 in the
place of the rotary switch (which I used for many years but have grown to
hate!). It uses a 4-pole/double throw mini toggle and a standard 3 position
switch. With the mini switch in the "normal" position you get a standard
Les Paul type 2 humbucking pu guitar. Flip the mini switch and the bridge
position is the two outside coils (closest to the bridge and farthest) in
series; neck position is the two inside coils in parallel (PRS calls this
"Parallel Strat"), center position is the series outsides + parallel insides
in parallel. 6 really useful sounds. The series outside coil sound is my
all time favorite. Sounds like a 10 foot tall Telecaster on steroids. If
you're interested I'll scan my drawing and post it. You need two humbuckers
w/ all the wires available and a 4 pole double throw mini switch to do it...
and, of course, a 2 humbucker guitar that you love to play.

For that matter two strats don't necessarily sound alike. :^)

My Variax electric 700 covers an impressive range of tonal possibilities, and my PRS's pickup wiring scheme allows LP-enough and strat-enough tones to shine where those sounds are expected. I've gotten compliments about both guitars from tone junkies. I enjoy playing the

PRS more, but the Variax is a goto for gigs where I need ultimate flexibility (including instant alternate tunings and acoustic guitar sounds).

To really rattle the purists, I get tone compliments even when I'm not playing through a tube amp (I know, total blasphemy ;^)

David,
I always used two identical Mecs so never had a need to swap one for the Master. Nice to know.
Thanks again,
Tom
"EK Sound" <askme@nospam.com> wrote in message news:4671ab87@linux...
Yes, in the Master/Submix fader window, you can assign which subgroups =

get assigned to the cards. Simply assign submix 1 to the EDS card=20 that has the MEC hanging off it that you want to use for your main=20 outs and you're done.

David.

 I tried a multitude of
 combinations of Mecs and 442s connected to different cards.
 Well, all but the 442 on Mec A
 which is unacceptable anyway. It seems to like the 442
 last in line with card E.
 I'm at a loss for a solution at this time. Any suggestions?
 I'm thinking of another Mec instead
 of the 442 is all I can do. I plan to have four Mecs in total
 if I can get three going successfully.
 I know Dimitrios was all over this months ago. He suggested
 Mecs instead of 442s. Anyone else?
 I know Dimitrios was all over this months ago. He suggested
 Mecs instead of 442s. Anyone else?

the MEC starts.

For me a "normal" startup will show the Internal reference light up, then the sample rate, then Master Clip and then Abit24 Clip.

But sometimes, maybe once on 5 attempts, there will be no communication with the MEC.

The light up sequence will not occur. then if i check in my Patchbay window, there are some components missing.

I close up the App and start it up immediatly and it is then ok...

Has it happened to anyone,, any ideas? any driver update?

See the provided Attached images just in case

thank you!

Decent-quality guitars are cheap nowadays, you should just buy one of each if you're looking for tonal variations. Part of what makes each guitar sound like itself is the wood, the neck radius (a bend on a maple-fingerboard strat has a different quality than a bend on an ebony-fretted gibson LP custom), the hardware configurations (bridge, tuning key lineups, etc) contribute subtle differences, as do a bazillion other factors in minute quantities.

Get an Epiphone LP Standard, a Squire strat & Tele, find the best-playing ones you can & have them set-up by someone halfway decent, & you'll be a happy guy if those are the three basic tonalities you're looking for without breaking the bank.

Or get a Variax.

business, got burned out, and will probably never do stained glass again, it's a risk.

pabl can't compare these to yours/Thad's mic, but these are a couple of extremely good builds (the green one is Mikes very first Royer build) and Claytor is very consistent and an excellent circuit man. I would imagine we're talking apples to apples. I'm prolly going to kick myself at some point for selling these. There are some singers that will inevitably be coming back here and wanting to know where *their mic* went so I'll have to wean them on to a different one. I even thought about replacing the tube and shell on one or the other (the coating on the grill affects the tone a little) of these and matching them up for extra duty as OH's or room mics but I couldn't decide which of the voicings I would want two of. they are more useful having a little difference in the voicings. When Ed Stasium was over here last, he brought over a matched pair of AT 4060's and left them here for a few days. I compared these to them and I personally preferred either of these mics to the AT's. The AT's were brighter and more *solid state* sounding by comparison. If these were multipattern, I would be keeping them. As it is, I have a pair of matched cardioid LDC tube mics (Manley Baby Blues) and a matched pair of AT 4050's for stereo LDC multipattern duties so these, being tube cardioids, are a bit redundant. They are every bit in the same league with the Manleys, IMO. I know that's a stretch to believe, but to my ears, they are at that level of detail (and these Manleys cost over \$1600.00 new, when they were making them), though the Manleys are a bit more mechanically versatile, being front address 1" capsules. I am needing the flexibility that multipatterns provide and the mic I'm buying is a Peluso 2247 (multipattern). I have A/B'ed it with these and they have their tonal differences, but they are in the same general ballpark as far as detail and smoothness are concerned. Probably has a bit to do with the Peluso capsules in these mics.

They are going up on EBay this weekend if there are no takers here.

My 2 cents. A strat, a tele and a les with a bigsby trem and locking nuts.
Also, a must have is a gibson vintage f hole.

After that an SG and a les junior.

Other areas we will agree on... USE AN AMP!

Yep. But strats can sound very different, too. It's funny, there was a
bit of initial criticism of the Variax because the strat emulation
didn't sound EXACTLY like the recent strats some people owned. Turns out
Line 6 did the emulation based on a particular rare and expensive
vintage strat with a particular sound.

The fun thing is you use the workbench software and raise the output
levels, change the body being emulated to increase sustain, and get a
hotter, sustainier strat sound. Which I did. I matched it with the other
"pickup" output levels so when I "switch guitars" I don't have to
change anything in my signal chain.

You can even experiment with the emulated volume pot resistor impedance
and the tone control capacitor value for each pickup combo in each bank.
And drop in different emulated pickups, put them anywhere including on
the neck behind the frets, or on top of each other, and rotate them as
you please. Go nuts, without soldering or sawdust.

OTOH, the whammy is a bit wobbly a

nd the guitar is not as well built as, say, my PRS. It's also only a 22 fret neck on the electric models, which is weird because there are no pickups in the way to add two (or more) additional frets. On the plus side it's decently playable; the sound is quite good; and the tech is as clever as PARIS, and as reasonably faithful to what is being emulated.

Transposing is pretty good but not perfect, there can be some DSP artifacts especially on non-wound strings. But in context it works pretty well for open tunings, mild capoing and low string octave bass.

> I'm not knocking technology or new gear, not in the least. I'm just surprised
> that _other_ people are using such modern guitar gear as the PARIS community
> seems, um, how do I say this, more on the traditional side than most.

It's possible to appreciate a good trad mag pickup guitar for what it is and can do, and also appreciate DSP emulation for what it is and can do. I like both. Both have been suggested in this thread.

I haven't run into any guitar players that were snobbish about the variac once they heard it. Same for when I use a non-tube preamp setup, once folks hear what I get out of the rig the comments have been good. It all comes down to tone.

> I've thought about a Variac, actually, but not so much for the different
> sounds but so I can store tunings.

On the electric variac my first custom bank is set up with an ES335 neck, a strat bridge/middle spank, a jumbo acoustic, the same acoustic down half a step, and a les paul bridge.

My second custom bank is set up with a DADGAD tuned martin, an octave down guitar (forget which one) for playing bass lines, a drop D tuned acoustic, a sitar, and the ES335 neck.

My third custom bank is set up to sound similar to my PRS in all PRS pickup positions. Who says all you need is strat/lp? PRS's sound great too. :^)

What else...I have a full customized five way strat bank when I want to live just in stratland, and a bank of tele sounds that I sometimes use. I like some of the stock jazzbox emulations. I occasionally use some of the oddball guitars and non-guitar emulations. I have a bank of acoustic

six and 12 string models, and some dobro emulations in several different open tunings for slide.

If I'm going to do a lot of acoustic stuff at a gig and I have room, I'll bring the acoustic variax because it's set up with heavier strings so I can lay into it more, and it lets me adjust compression on the fly which is great for fingerpicked stuff (with no feedback).

Cheers,
-Jamie

off the stage. USE A REAL GUITAR!! Heh.

Flash forward and now that stuff is traditional

I bet you would both dig my variax setup if you heard it.

And Chuck, I bet you would even like what I do with amp emulations, once you hear some of my custom setups (which stand up to comparison with my tube rig).

-----=_NextPart_000_0288_01C7AEC6.B32284D0--I went over the Protools mix guy's studio yesterday to hear the mixes of the project that I played on. He mentioned again that I was cutting too hot. We got into a friendly disagreement about the subject. He said he would always gain down the track (basically rendering it and doing a gain reduction) if it was that hot because the plugs wouldn't have any headroom to work. (I noticed he was using UAD stuff)I asked about inserting a plug with more headroom before the offending plug to adjust level that way, and he was pretty opinionated that that would affect the sonic quality in a bad way. He's a good guy, so in the interest of not wasting the artist's time who invited me, I just let it drop. The mixes sounded pretty good though. Although very low in level. He's hip to the summing buss in protools choking if you push it too hard. It will just have to be made up in mastering. Opinions???

>

>

>> So these mics are too mismatched for OH duty?

>

You could use them for OH duty. The differences are almost completely inaudible unless working with them up close on hot sources. You could gain match them and you might want either roll off or boost a teensy bit (about 1/2 to 1dB with a 1/2 octave Q) in the 4-6KHz range on one of the mics to match up their frequencies if you even noticed any imbalance. If you're a tech or know a good one, you could match the tubes (and I'd match the grilles also-the gold plated grille may lend itself to a teeny different tonality than the black painted grill for up close vocal work) and you'd be extremely close. The capsules were both purchased at the same time directly from John Peluso, are from the same QC'ed batch and should be very close to a match.

give me a call if you want to talk about these. I'm available tonight
970-769-0488

;o)Jamie, I'm surprised by your praise of the Variax. I found it disappointingly dead feeling and it seemed to have a latency in creating the sound. Also the instrument was shite and looked like a toy to me, but I don't think it was the expensive model. I do really like the concept of it - maybe I should give it another shot, but they need to make a pretty version. A guitar is like a woman - it should be as pretty

as possible, don't you think.

I'm also surprised by the suggestions that tapping a humbucker gives a decent Strat sound. I tried that in 1978 and it sucked. i tried it again about every 10 years since and it sucked every time. Can it have stopped sucking in the new millennia? I doubt it.

If I were mostly an R&B and rock player I would do a Strat w/ a humbucker in the bridge. That's about the most versatile setup I have heard. I actually have a handmade strat with EMGs and a midrange boost knob that does a pretty strong lead sound and of course excels at shimmery rhythm sounds.

To each their own, but it might have been the particular variax you played and the way it was set up. I've played some 300 models that were terrible, sharp frets and bad action. Poor QC at the factory? I've played others that were decent. My variax plays decently.

Whatever very minor latency might be in my variax at normal tuning hasn't put me off at all. It's very responsive, feels like a normal guitar.

When I use the transposing feature there is noticeable latency but my brain has had no trouble adjusting. A little latency isn't a problem per se - for example I don't have trouble adjusting to the latency when playing with an amp stack at the back of the stage (although I don't do that anymore, I've reformed and go for low stage volume/close monitoring now).

I haven't noticed a "dead feeling." The guitar feels as alive as my other guitars. I can even get feedback (the good kind).

In short, my variax gets good tone and is amazingly flexible. I also added a GK3 pickup to it to drive a guitar synth at the same time, and I use that setup with live multitracking in my solo show to build gigantic arrangements. Very fun!

But my PRS is my favorite guitar to play, and I take that on gigs where I don't need to cover acoustic/electric/synth/alt tunings. When I just need to be the electric guitar player in a band, the PRS is flexible enough to cover a wide palette of electric guitar tones and it's a better built guitar. Plus it has 24 frets. Plus I have two of them in case I break a string. :^)

When the new Roland VG99 ships I'm going to check it out. It would let me play the PRS and still do guitar modeling. I think the variax modeling is better than the VG88's but we'll see if Roland has raised the bar with the new box.

Another option would be to take variax guts and put them into a better guitar. Like Adrian Belew did with a Parker Fly. OK I WANT that guitar, (but not in that color). :^)

I've considered transplanting variax guts into a custom body - which would also let me add a 24 fret neck, but then again, my variax is pretty decent as it is so there's no rush. If I go that route I'd grab the guts from a 300. There's no sense gutting my expensive 700. :^)

> Also the instrument was shite and looked like a toy to me,

I dig a good looking instrument, and I have the coolest looking variax on the planet (cherry sunburst 700). Although the very best looking variax is the acoustic model with the natural wood top, I love mine. But I don't sleep with either of them...much...

My cherryburst PRS looks and plays a notch better. I've never had a luthier setup the variax for optimal playability though (since it's been good enough) but that's on my todo list.

> I'm also surprised by the suggestions that tapping a humbucker gives a

> sucking in the new millennia? I doubt it.

Not identical to a strat sound but similar enough to play that spanky role.

Actually I think the PRS does it by combining inner and outer coils from the two different pickups in various combinations. I had an Ibanez Roadstar II that did it by splitting the coils on either pickup with any PU combination available. I could get spanky tones out of both. Not exactly a strat but no suckage either.

> If I were mostly an R&B and rock player I would do a Strat w/ a

That's a great setup. My Kramer is configured like that (although the neck PU is a sustainer driver as well). My Steinberger has hum/single/hum which is also a very versatile setup.

OK, now I guess you can see I swing both ways, a collection of trad pickup guitars AND a couple of variaxen. I use them all. Clearly I'm addicted...

Cheers,
-Jamie

I'm in no rush. I don't really have time to beta test right now and the current release version of Safari works fine. I am looking forward to the new tab dragging feature, though.

But for anyone who wants to test the beta, based on that story it would be wise to avoid force quitting in the middle of the install.

Cheers,
-Jamie

Don't you find the split humbucker to be extremely weak and anemic? It has no fullness.
