I hear subtle improvements at 96 for small ensemble acoustic recordings.

mic pair on a string quartet or a small folk group. By the time you convert
back to 44.1, any real improvement is modest, but the original 96 masters
are definitely superior.

Where I here a dramatic improvement with 96 (or other high sample rates)
is when I use plugins. HydraTone is way be

since. That error message was all he said. I will try to give him a call

later today to see if he got it worked out.
GeneOk, thanks for all the advice

I'm fairly sure I'm plumping for a SPL Gold Mic (dual channel tube pre, mic inputs only - c.\$500 on special offer. I'll use this, plus the Voicemaster on acoustic guitar / vox, and for drums (presumably overheads (SPL) and Voicemaster (kick) would be the best allocation in a multi-mic setup).

That said I'm tempted by a dbx 386 at the same price (which has the additional benefit of handling line level signals). How does this stack up to the Gold Mic?

Also, is there any reason (e.g. impedance) you couldn't feed the Gold Mic's mic level si

Hehe, well Northcote is more my age group probably. My guess is that I'd be more likely to get laid there, but on the other hand if I was to get laid in St Kilda, there's a lot more mid 20's over that way... so it depends whether I would prefer a better chance of getting laid by a 33 year old, or a smaller chance of getting laid by a 24 year old...

....mmm, so much to consider. ;o)
