Apple comes with a one year warranty, and 90 days phone in tech support.

However, you can set up an appointment and walk in to any Apple store for free tech support. Apple does have an extended 3 year warranty, and it is vary reasonable on the consumer models. I personally got great service on my extended warranties. They will replace anything that is defective in the time frame.

>>So I start rebuilding the Paris rig. One of the many things that pissed me
off so bad that I decided to bail was that I fired it up last sunday and I
got the "no interface connected to master card message". I wiggled, jiggled,
plugged and unplugged and finally said **** it! This was kinda the last
straw. I tested all of the cards with each MEC, tested all of the cables and
figured I had a fried EDS card and quite frankly I didn't care. I started
tearing it down in total frustration. No more of the *** for me I says! I'm
gonna go native by golly. Well, now I start rebuilding the Paris computer
(because I had already started breaking it down for parts) and first thing
that happens is that I load one of my EDS cards to test it and the computer
goes nuts, I'm getting insufficient resources messages, deBug messages,
tptque errors, you name it. I save my config file and my fx.var file,
uninstall Paris, reinstall Paris and the NVidia AGP card that was
functioning so perfectly before I tore it down goes totally bonkers and
repeatedly reboots the machine in safe mode. Windows can't uninstall the
driver with the uninstaller because it is running.....even in safe mode
.....so I hunt everything Nvidia'esque down in the registry and kill it,
reboot the machine.....same thing.....pull the Nvidia card go hunt
down an old Matrox card, hunt and kill some more NVidia crap in the
registry, kill some more Nvidia stuff that I had missed before on the C
drive.....then I can get it to boot so I load the Nvidia PCI card. It finds
the driver that I had apparently missed somewhere, somehow but it's finally
working perfectly so I load all my EDS cards again thinking I might get
lucky.....nope!!!.....still getting the "sorry, you're hosed.....***
you!!!" message.....soooooo.....I start testing the cards one by
one. All 4 of them work fine if they're not interconnected and the pins all
look good with nothing bent.....now to test every ****'in interconnect
cable until I find the culprit(s).

Gee.....it's sooooo nice to be back in hell again..

;oP [http://news.harmony-central.com/Newp/2006/Digital-Audiosoft- Creamware-Plug-Ins.html](http://news.harmony-central.com/Newp/2006/Digital-Audiosoft-Creamware-Plug-Ins.html)HI
James,

Who doesn't have a computer that will work flawlessly with the Pulsar card?
Sounds like somebody would be diving into the same pit as trying to
get Paris to work properly on new PC hardware. At least Paris was
discontinued so at least it has an excuse.:)
Sorry if I sound bitter but 2 years trying to sell the stuff and having
nothing but hassles and no support at all. most the time is seemed like
I was doing their damn hardware beta testing...

If they still have PCI buss and ACPI issues after all this time then they should just redesign the card. I could easily get 4 Paris cards working on a system from 98-2002 no problem. Getting more than one Pulsar was a mind numbing process. By the looks of their newsgroup it doesn't look like much has changed in 5+years. I guess that explains why it has caught on at all.

It's great that Dimitrios has got it working so well but he is a Mad scientist much like DJ...)

may bring a tear to your eyes. These great questions and answers are
from the days when "Hollywood Squares" game show responses were
spontaneous and clever not scripted and (often) dull, as they are now.
Peter Marshall was the host asking the questions, of course.

Q. Do female frogs croak?

A Paul Lynde: If you hold their little heads under water long enough.

Q If you're going to make a parachute jump, at least how high should
you be?

A Charley Weaver: Three days of steady drinking should do it.

Q True or False, a pea can last as long as 5,000 years.

A George Gobel: Boy, it sure seems that way sometimes.

Q You've been having trouble going to sleep. Are you probably a man or
a woman?

A Don Knotts: That's what's been keeping me awake.

Q According to Cosmopolitan, if you meet a stranger at a party and you
think that he is attractive, is it okay to come out and ask him if
he's married?

A Rose Marie: No; wait until morning.

Q. Which of your five senses tends to diminish as you get older?

A Charley Weaver: My sense of decency.

Q In Hawaiian, does it take more than three words to say "I Love You"?

A Vincent Price: No, you can say it with a pineapple and a twenty.

Q> What are "Do It,&

>>>Hi,
I am curious as why someone cannot make pulsar work ok.
I have a P4 2.6 with 1G memory ASUS P4B motherboard and have only stable
pulsar system.
Well if you try to run the system at the lowest possible ULLI (latency) 1.5ms
you may are getting serious problems now and then.
I don't get it.
Pulsar is dsp.
LATENCY is not an issue why bother with low asio latency settings ?
You can monitor via pulsar , even VSTI instruments via Cubase have no latency
when played via Creamware's midi interface.
I use the biggest asio latency and what the heck.
www.planetz.com/forums
There are hints tips problem solutions free effects announcements thousands
of users, the best forum there is , period.
Regards,
Dimitrios

tering compressor and track compressor

Creamware Pulsar was the best of all but still not satisfying.
That was until I tried Paris.
I worked some good years with analog back then and it was the first time
I could mix on the fly with satisfying results.
OK I don't like much the AD converters on Paris except for some drums sounds
but the mixing buss thing rules, eds compressor I like, reverb is decent for
some things, eq is very fine used much.
That's why I wanted to say I keep Paris no matter what.
I will still be using Creamware to integrate the latest trends and effects
and routing possibilities and leave Paris for mixing.
Regards,
Dimitrios

>in the arizona area...tuscon/phoenix etc with a Fostex G24X. some old
tapes need to be transferred to disk.Hi, Dimitrios.

I have tried your first suggested method, but the biggest problem
with this is that automation goes out the window. (aux sends are
not automatable, only returns!).

Also, whilst I have used and actually sometimes like the
EDS compressor for bass and backing vocals and such, it is far too
"pumpy" and limited for drums, to my ears.

As far as using the native submixes are concerned, yes I have used them
in the past for extra tracks when I have needed them. (block BV's
doubling the first word of an already layered chorus, for example....).

Admittedly native submixes were always the "last line of defence". (defense
to those in the US)

I always found, at least on my old computer, that using native
submixes, even without additional native processing, seemed to

bog the system down considerably.

I am yet to try native submixes on my new rig, and maybe I could use your second suggested method successfully.

Thanks for your thoughts, Dimitrios, and I will try them next heavy duty mixdown.

Good on you for "Spreading the Lurve".

I have no option but to stick with Paris for a while.

I am considering buying protocols M-powered, just to see if it sucks as badly as PT-free did some years ago.

I realise now that despite the fact that mixing in Paris fits like a glove, I may have to move on to that poxy P.O.S. Digi interface if I am to continue in this (equally poxy) industry!

It's funny, but I can't begin to imagine making my mixes "sing" as easily outside of Paris. (Just ask DeeJ's wife... she knows the poop!)

Over and out.

>On paper Pulsar looks like _exactly_ what I would like. Semi-open format so third parties can compete. Cool effects with step sequencers and filters and such, not just a bunch of power ballad reverb plugs. GREAT sounding synths, works in VST hosts. I mean, it could be called the 'Hey Thad!' card. But I was _scarred_ setting one up a long time ago, and that was for a magazine review and I was getting red carpet support. I'm building a core duo or quad Intel machine soon and I'm going to try to shoehorn that same card into a super new mobo with a UAD on the same PCI bus? When I couldn't get it to work on the legendarily exotic 440BX chipset? My debit card still gets itchy when I'm on Novamusik and see the Pulsar gear but then I remember what I went through with it.

> in the arizona area...tuscon/phoenix etc with a Fostex G24X. some old
> tapes need to be transferred to disk.I started using DP about a year ago, and so far here's what
I've been doing.

Tracking in DP taking advantage of VSTi's, the UAD-1, and the various other
things that PARIS can't do. I freeze the tracks in DP. Then I copy the 24
bit SDII files to my PARIS drive and convert to 24 bit paf's using Soundapp
under OS9.2. Fly the tracks into PARIS and mix there. The downside is if I
want to use the UAD-1 comps, EQ's, etc. in DP I have to make those decisions
before actually "mixing" in PARIS. It's really not any different than
applying EQ or Compression during tracking with hardware though. I mean
you'd have to make those decisions before mixing in that scenario also.
Anyway, so far I've been satisfied with that workflow. I am going to try to
do some tracking in PARIS, fly those tracks to DP, add VSTi's, plugins,
etc., and fly those tracks back over to PARIS for mixing. Several people
here think that some of PARIS's magic also happens on the way in, and I'd
like to test that out. On occasion, I've done everything in DP, but I've
never been as happy with my all native mixes. I also really miss the PARIS
EQ, nolimit, and other various things that aren't available in DP. I'm kind
of old school with mixing in that I don't really have a need for elaborate
automation, etc. The fader automation in PARIS is all I use 99% of the time.
The only real complaints I have about PARIS are the lack of automatic plugin
compensation and not being able to use VSTi's. Anyway, I know it's a little

more time, but I'm a solo "artist" and don't really do much recording for "clients", so I've got the extra time to make it work.

>> Regards,
>> DimitriosWent to CompUSA last night, they didn't have the white MacBook so I had to

get the \$1499 black one. Spec'd a core duo Dell 640m to as close as I could get it. \$944 for the same CPU, twice as much RAM (though still 2x512 and not a single 1gb stick), one inch larger screen. Ran the updates on OS X.FurryCritic and there was a 300MB(!!!) OS patch waiting. Are they recompiling everything from (new) source? Wow.You paid extra for black. I guess some people think it's worth it but I would go with white. About \$500 less here:

<http://www.amazon.com/exec/obidos/ASIN/B000EPJNHW/weeno/103-7748545-1896629?%5Fencoding=UTF8&camp=1789&link%5Fcode=xm2>

That's a big update alright. On the bright side, Apple has been consistent with regular free updates during each dev cycle and OSX is better for it.

Cheers,
-Jamie

VST to DX wrapper? I don't own that. I'll have to check it out.

Is that why it wouldn't pass audio? It did show up as an insert with the connection name in Paris as a vst.

Cheers,

TC

That's Apples idea of progress, they want to be on the cutting edge, but they leave customers behind in the process.

I think they need computers that cost \$599.00 to \$999.00 with five combo

PCI slots, for consumers. They could really take some of the market.

with an investment in older hardware. OTOH, PARIS doesn't work with G5
boxes anyway, they don't run OS9 except through emulation. And
CreatIDsonique completely dropped the ball with OSX.

BTW the morphing PCI scenario is a great argument for using a Firewire audio interface. My Motu 828MII has migrated from a G4 Powermac to a G4 laptop to a G5 Powermac with no problems, and it will work fine on MacIntel laptops and next year's 8 processor MacPro should I be tempted in that direction.

till you get a jell.....no wait, that's for the anti-gravity machine.
Ok for the mixing.....

Here's the Paris Bible on mixing levels

When the lights on the MEC blink you're screwed. When you have the
mixer window open and you have meters set to pre-fader, if the light
clips, you're screwed.

If you have the meters set to post-fader and the clip light clips on the
meters, it's ok !!! Use your ears here.

If you clip on Native inserts you're screwed. If you clip on EDS inserts they are a little forgiving but try not to.

When you are mixing down to the submix and master fader if the clip lights come on, your ok, use your ears here.

Make sure to setup your patchbay to +4 on everything possible to get maximum signal. Like my line 6 amp has an adjustable output, so I crank it up till it just clips on the MEC leds and pre-fader clip lights at MAX output when your at the loudest point in the song. Don't let some singer do a vocal check and not belt it out. Force em to give you levels. Check, Check, One, Two, "Hey, gimmie some freaking level" !!!!

Once you get a NON digitally clipped recording the rest is in your ears.

BAD
Mec clip
Prefader clip
Native effects clip

Not so Bad
EDS effects clip

Good (PUSH IT! Use your ears.)
Postfader clip on faders, submix and master

Use balanced signal paths wherever possible too.

I hope it helps.

hardtop (no Landau or convertible), Green, in pretty darn good shape, but
of course there's a lot to be done . . .

We use SoundWeb at work, though I've not logged much time with it. There =
is an editor out there called RP Edit that is supposed to work with the =
2120. Here's a pic of the front. The modules at the GUI on the unit are =
configurable, but not drag/drop.. they 'might' be in RP Edit. By the =
time RPE came out my programming was done so I never used it.=20
As you may note, the FX are on the right side and the pre section on the =
left. The PreAmp can be config'd a few different ways, but the primary =
concern you have sounds like with the FX. The 2 SDISCS are cut up into =
two full "pies" of 1/4 slice each, much like Paris FX. Also, you can set =
it up to have seamless patch changes by using one pie for each preset =
and then set the xfade times. It's the best thing I've seen out there at =
this trick, ever. You can use two SDICS at the same time to run massive =
FX algos, but you lose the seamless that way.=20
FWIW
