>>So if I take a windows formatted drive to a mac avid setup, will they be able to read it? Also, I'm getting ready to install ubuntu on a second drive. I'd still have windows on my primary drive, then I'd set up a drive to swap between linux and window. Will linux read the windows Formatted SCSI and allow me to transfer over?
I know anyone attempting this should know the answer to this question, but that's why I'm using a dedicated drive!!!

wrong. Maybe you should send the magazines your credentials and your resume,
and start freelance writing reviews.

As far as the Liquid Mix, think about it! Your talking about an experience
at GC! They have no idea what they are doing, much less setting up a Mac
with a new piece of equipment. I'm surprised it worked at all. It's a firewire
DSP box like the TC box. They probably corrupted the system or drivers,
I don't think it had anything to do with the Macs G5 horsepower. I believe
there were problems with the initial drivers. The reviewers may have had
bad drivers, I'm not really sure, but to blame it on the Mac is lame. I
think there are other factors at play.

Macs of the past may have been the fastest machines for a moment in time.
Apple never stayed on top for vary long. Usually with in 45 days or so,
the PC world would surpass the Mac in speed. They all leapfrog each other
