TCBDo you think Dell would be a good DAW PC? I understand they're decent, but often not very robust.

use paris with clients
must get frustrated at times.

Thanks,

Steve L.I would be leary of Dell for a DAW computer. They do not use top of the line components where it doesn't count. IE: power supplies, mother boards, memory, etc. Most consumers don't know about anything other than cpu speed, HD size and memory size. You should consider building your own computer. It really is quite easy and you can research all the components your self.

It's an integrated nVidia AMD chipset, I'll bet you hash brownies to hash browns (or perl hashes) a TI firewire chip, DDR2 RAM, SATA drives. What's missing? Maybe upgrade My audio cards are firewire, I have one UAD-1 that I'll have to replace soon anyway with a PCI-E card, and I'll need it less with the native f/x.

br />

into making what I consider to be a studio quality drum performance: Good, consistant time; good consistant tone; a solid groove that makes the other musicians want to play their best; good taste when it comes to where and when to play fills. I can fix timing, although sometimes the life of the groove suffers, and I can fix the occasional less than stellar snare or kick drum hit, but if I've learned nothing else in 19 years of doing this for a living it's this: The best money anyone can spend on a project - maybe even more important than the \$\$\$ spent on the studio - is to hire the very best studio drummer you can find!

All that said, my first question would be - Is it possible to hire a better drum to come in and replace the existing drums? My guess is that it wouldn't be more expensive than hiring someone to edit the drums you already have. I'd be happy to do it for you, but I charge \$75 per hour and drum editing is painstaking work...

Good luck!

Gantt
