for pretty much everything else, though,

TCB

RS202L's side by side, so do you still think it a good idea to ramp up the
capacity? You say that something else caused it to blow, what could that be?
I wasn't using it at the time. Something I left out is that the power is
always on when my rack is switched on, which probably isn't a good idea and
I believe my phantom power was on for most of the channels, again probably
not a good idea. Thanks for the help. I assume pos and neg are in the same
direction as the other rectumfrier beside it?

Thanks,

Rich
