Germanium.Gantt,

In Entourage, go to the Tools menu and select Accounts. Click on the News tab. Give the account a name like "PARIS News", and fill in the other info it asks for, then click on the Server tab. Insert this:

news.parisnewsgroup.com

Hit OK. Now you should see "PARIS News" as one of the selections in the Folders column on the left side of Entourage. Double click and it should go get the various groups for you. Select the group you want to view.

I did this from memory as I'm not in front of my Mac right now, so I hope it's close. If you still have trouble, I can help more when I get home tonight.

Tony

like Seagate right now.I see that their external drives only have the 1 year warranty compared to the 5 year on internal drives.

Should I buy a firewire enclosure then put the Seagate in or just get the external drive?

PeteGet the complete external drive. Very nice, very reliable.

You don't need to put drives in enclosures any more.

I use one every day.

Try those man. I haven't used them in some time (I have a load of amps/cabs/simulators these days) but they might do for you.

design is very different from those. It uses large high power transistors instead of the small low powered types. I think modern construction techniques used for making them helps eliminate many of the problems associated with germanium transistors.

Sound wise I would compare it to the Neve 1057 type modules. The earliest "prototype" Neve that used germaniums. The big differences being much higher voltage and headroom with better frequency response and noise. The key to the sound on the germanium is the controls. Especially feedback and thick. you can actually vary the feedback of the amplifier and change how it functions and sound while doing so. In this months Tape Op there is a review where he says the feedback one direction sounds more open and "faster" like and API and the other more gooey and thick like a Neve. Combine that with the thick, pad, and input gain and you have a good selection of tones...Check out the review if you can...

Hope this helps

What do y'all think about this one: Western Digital Caviar SE WD3200JD
320GB Serial ATA 7200RPM Hard Drive w/8MB Buffer?

Little more space and less \$\$ than the closest Seagate...

Cheers,

-Jamie

These are the words I want to hear. Thanks Aaron.

I wonder why people want these extra large drives with Paris?
I limit mine to 80 gig. It's room for about two full albums
in most cases used for backups only. I have my clients buy 40
or 80 giggers too just 'cause they're inexpensive. They usually don't=20
get past 20-30 gig on a project. My concern is if a huge drive like
Jamie's talking about (320 gig) goes down and it's any where close
to full you lose a lot of data. Spooky thought. I do make backups
but if a huge backup goes down it's even more work to (as Rage says)
"Rectify" . Awesome tune.

Tom
