As promised I've put together a PPJ of collected Paris FX presets - unfortunately I can't attach it as it's too large (c.1.7Meg) - I'll happily e-mail

e the L & R only exist on the
inserts of the first submix .

Having unhappy time with midi lately... These days I run Paris and Cubase SX on separate machines, slaving SX to Paris via ADAT out to RME in, so this would be a non-Paris topic, I guess... Except as it possibly relates to sync issues...

Anyway -- Mostly work with VSTi's in SX, which are peachy

fine, but
still like to use a couple of older external modules some times, and
that's where unhappines creeps in: Seems to take SX a loooong time to
lock (like 8-10 bars or more) and there's still a bit of drift (I
think) once it does. Alas. My question is: is it the funky older
2x2 usb midi interface? The RME Digi 9652? Some funky preference
setting buried within Cubase's manymanymany menus? Maybe I need more
zinc? (I do need more zinc.)

Seems like such a caveman problem to be having these days -- I mean,
people had this nailed in 1987 -- where did we go wrong? Any solid
old school midi masters around here care to help out a poor pilgrim?

muchas gracias -- Chas. I am having problems getting paf to wav converter to load files. Is this a
problem in xp? Recommendations? I have tried re-installing a couple of times.
But, ala
