>Yes I was just looking at options using the existing analogue i/o and ignoring the 2 adat cards...for the sake of consistent audio quality...This is a loss. Can't say that I got into synths at the Arp stage, but I did

at the time the DX7 came out. I've never gotten to play a Moog, but I did mess around with an OB 1, and a friend's Arp. Without synths and synthesis, my musical life would have been a less interesting and rewarding experience.

So much of our contemporary music owes a debt to Mr. Moog. May he RIP.

I've been following his progress via his site at www.caringbridge.com/bobmoog and it truly has been sad.

A real genius, and one of the good guys. RIP, Dr. Moog.

"Enjoy every sandwich." -- Warren Zevon

"Here at Microsoft, Quality is job, oh, I dunno, maybe 7 or 8?"Well looks like I will probably go with MusicPro insurance if they accept me.

Looks to be about \$100 / year per \$10,000 of coverage.

Mine came out to \$525 / year with a \$100 deductible per claim.

Not bad I think.

Waiting for approval of my application.

They also have Studio insurance to cover you in case someone electricutes themselves

at your studio and wants to sue you.

\$350

a lot of testing in this area. Here's what I found:

>

>Windows XP can do somewhat tight MIDI timing as long as it does nothin else.

Gonna have to disagree with you there, I'm running SX on XP and I can retrack a MIDI track to regenerate a different audio track (you know, if I want to change the sound a bit, for example) from an existing MIDI track with no perceptible drift. Perhaps it has more to do with the type of interface you're using in combination with that?

> As soon as the system gets loaded down with say...dxis, you're doomed.

See above.

>PCI cards are twice as good as USB with the system loaded down, but are still

>nowhere near good enough (PCI 10ms drift, USB 20 ms drift)

Is this with more CPU load as well? Because I just set up a USB-based (Lexicon Omega) system on a friends computer & it synced fine, but we were just testing a MIDI track retriggered through the synth she has, plus an audio track triggered by the same MIDI track. Very slight flanging, but nothing more. Again, that was just a couple of tracks though, for test purposes, with no plugin's, etc.

Does that also cover anyone you electrocute purposely because
you're tired of their shit & they suck as musicians?

:DI have been playing around with the demo for PSP Mastercomp. This is absolutely
worth checking out. Very impressive results for a native plugin compressor
and it could be the best sounding 2bus plug yet.

Genethanks!

Yep. I take that on board. I must say I have certainly not ruled out ram. It was pretty much my first guess, and having chased a few other options down now it's coming up on the list again. I have two sticks so I can swap out one, then the other, but of course they are identical, so if it's a compatibility thing I'll be lost still, but I may fiddle with latency and the like and see what I can learn. That's next on my list. It's going to be hard though of it's simply a ram compatibility issue.

I did buy cheap ram though, so it's certainly on my mind.

Thanks for the advice.

Oh, and my brother hasn't touched it, so it can't be him... ;o)

Cheers,

Kim.10mb is too small for me personally and \$75/year is not cheap

>Hi Neil,

All my testing was done with Cakewalk Pro Audio 9, and the Audio being played back was in PARIS, not in Cakewalk. Systems that do MIDI and audio together may fare better.

Also, just playing back tracks didn't bog the system down enough to mess with MIDI timing. It was DX effects (I was testing with 16 DB Audio compressors) that seemed to shitcan the sync.

If so, with Paris ... or something else?

Thanks,
jjI've got a K8NS-Ultra-939 I'm working on at the moment.

So far I haven't got it stable. Keeps on BSODing with a "A Problem has been detected and Windows has been shut down to prevent damage to your system" error. That's without the Paris cards in it though, so it's not Paris doing it. It's possibly a ram fault or something, but the ram passes the 4 hours of testing I gave it.

I'm still working on it, but I'll keep the NG up to date when I work it out.

Aside from the issues, she is pretty quick. ;o)

Cheers,
Kim.

Or, you could look for an alternative route to remove it from the equation. Google and Anti Pace seem to be rather popular among the format happy audio dudes that are tired of reliability issues.

>The way I do with wires is:

I put wire out on AUX 1

Then I put every aux on every drum track same level so to have the same drummix as the channel faders.

Then I open a new channel track and put wire in

Then goes all drumtracks that have aux1 engaged.

The "mix" drumtrack (you can make this stereo with two auxes and two wires) can be further processed with EDS compressor.

The only drawback is that there is some sample latency but something will come up for this, I guess...

Oh,
So I guess I brought some old "fresh" idea around...
With wires you could assign the the out wire to an effect return wire =
in to
save on Paris channels.
I also tried the wires with drumtracks.
You could send all drumtracks to the same wire channel (i.e. 0) and =
then
open a new Paris channel that hass all drums on it.
Then apply a EDS effect like compressor....

I guess you have tried that already right ?

ever seen. Kevin Spacey's love for his subject is in every frame,
and he sings all the parts himself. Quite well too.

Back in the 60's we all thought this "night club jazz" was way
too unhip for us... hah!

The first time I heard Sinatra from before 1955, it almost gave
me a stroke. My dad just played the later scooby-doo stuff,
and I had no idea what he had done earlier.

This will give you the same reaction for Bobby Darin.

Great, great movie. Not to be missed.

Hehe, well I just finished last night's pasta, and the machine is still going strong, so I can only assume that my recent pasta creation pleased our almighty lord. ;o)

Mmm... garliiiiiicccc... ;o)

Cheers,
Kim.I've just bought these 2 x 250Gig drives. Plus my old 120Gig is still in the box, in addition to my old old 27Gig... all up that's... err... 647Gig!

Surely somebody here has a terrabyte in their Paris box? :o)

Cheers,
Kim.To group your drumtracks and send them thru stereo compression ,only one EDS stereo instance I am sure most of you are already using this but maybe still some never tried...

- 1.You put stereo compressor EDS on AUX1.
- 2.You put on every drumtrack you wanna compress the aux1 in prefader status and control with aux's panpot level the place you wanna put it in the stereo field.
- 3.You push the fader all the way down -90 as to not have flanging on your drumsounds.
4. You control individulal drumlevels from Aux1 level knob and pannong from panpot knob.
5. For you comressor output level you have that on Aux's 1 return knob with panpot again possibilities.
6. For EQ you put after the stereo compressor in aux1 the FreakQ which is also stereo to have control over frequencies.

7. That makes me happy as opposed to using UAD1

Regards,

DimitriosHow could we solve the flanging?

COuld we say, copy all the drum tracks to an adjacent 7 group of tracks, slide em ahead, than sample slide back (Like UAD1 Situation) them before sending em to the AUX1? Then tuck em under the original drumtracks?

would sample slide be before the Aux send?

MRYes that would work as long as you could figure out exactly how many samples
is the processing eating up.
That is with 0 lookahead.
Then you just nudge 1ms back for lookahead 1 and so on...
Nice.
I tried to find the

I was having already btwo instances of compression open with lookahead so the 236 was referring to those two compressors too, sorry...

The actual latency is 4 samples.

Yes only 4 samples when you send via aux to a eds compressor with 0 lookahead.

So to compensate you have to nudge for 1ms (80 samples) , thus voxengo sample delay should be 76 samples...

I hope now I got this right.

Sorry again for beeing so quick with my posts without double checking first.

We want to be able to compress our drums and bass and use that along with the uncompressed tracks all realtime without UAD1 right ?

1. We choose which drumtracks to compress...kick,snare,OH.....
2. We may add the bass guitar too.
3. We copy those tracks on adjustend tracks on same EDS card, so one EDS card could be dedicated to drums only if you are so lucky...
4. We put their faders all the way down.
5. We nudge the tracks for 1 (paris nudge) to the left and put the FREE voxengo sampledelay plugin on each and every of those tracks and put the number 76 (4 samples the actual delay for auxing)
- 6.We put on aux1 the stereo EDS compressor with 0 lookahead (the above calculations are for 0 lookahead) .
7. We pan the auxed tracks using the aux1 panpot.

8. We control the compressor's output from AUX1 effect return.
9. If we want to eq also we can use FreakQ stereo eds effect but we have to put 74 instead of 76 in voxengo sampledelay plugin.(FreakQ produces 2 samples latency)
- 10.I love Paris

Simply not the case my friend.

Insults will not make the challenge to Darwin go away.

DCgood summary.

If your putting drum tracks on another EDS card to compress them and mix them with the uncompressed tracks, be aware that there is a small amount of latency between cards. Typically 12 to 14 samples between the first and second cards and 2 samples per card after that. Systems will vary so you should check your own.

>Thanks Rod,
May I make a crazy thought here ?
Why not put four different compressors , one stereo as above and three mono.
Aux2 ,3,4 take the mono compressors.

So as latency should be the same you feed Overheads to stereo compressor, kick to mono aux2 , snare mono aux3 , bass mono aux4.

If you will use freakq for OH's compressor then you should use 74 sample latency movement.

For other auxes's compressor no eq so 76 samples there.

Might work even better right ?

You could squash all four compressors with different settings according to each sound and have the uncompressed along with the compressed...

Am I missing something here ?

Regards,

Dimitrios

 How do you compensate ?
 Say you have 7 ms lookahead, you nudge 7 times 1ms to the left or one 5ms
 and two 1ms ?
 Is this the same ?
 I read that 1ms is 80 samples but 5 ms is not 5x80=4000 but instead 240 !!
 What do you do ?

erefore it must be designed,"

but "I now know enough about this feature to convince me that it could not have originated in a Darwinian fashion but has the hallmarks of something made by design."

Finally, Dennett falsely claims that "proponents of intelligent design

challenge any mainstream biological understanding." Apparently, Dennett did not bother to visit Discovery Institute's Center for Science & Culture web site, which would have directed him to some of the scientific research and scholarship published by ID proponents, including experiments that challenge Darwinian evolution.

Instead of presenting any real science--or even laying out the issues accurately--Dennett merely repeats the standard Darwinian mantra: "The designs found in nature are nothing short of brilliant, but the process of design that generates them is utterly lacking in intelligence of its own." This may serve the needs of Dennett's atheistic philosophy, but it is sham science.

Even better, here is an article, also from the NYT, about what ID actually is.

Design for Living The Basis for a Design Theory of Origins
By: Michael Behe
The New York Times
February 7, 2005

teaching of Darwinian evolution, there has been a rush to debate the merits of the rival theory of intelligent design. As one of the scientists who have proposed design as an explanation for biological systems, I have found widespread confusion about what intelligent design is and what it is not.

First, what it isn't: the theory of intelligent design is not a religiously

based idea, even though devout people opposed to the teaching of evolution cite it in their arguments. For example, a critic recently caricatured intelligent design as the belief that if evolution occurred at all it could never be explained by Darwinian natural selection and

could only have been directed at every stage by an omniscient creator. That's misleading. Intelligent design proponents do question whether random mutation and natural selection completely explain the deep structure of life. But they do not doubt that evolution occurred. And intelligent design itself says nothing about the religious concept of a creator.

Rather, the contemporary argument for intelligent design is based on physical evidence and a straightforward application of logic. The argument for it consists of four linked claims. The first claim is uncontroversial: we can often recognize the effects of design in nature. For example, unintelligent physical forces like plate tectonics and erosion seem quite sufficient to account for the origin of the Rocky Mountains. Yet they are not enough to explain Mount Rushmore.

Of course, we know who is responsible for Mount Rushmore, but even someone who had never heard of the monument could recognize it as designed. Which leads to the second claim of the intelligent design argument: the physical marks of design are visible in aspects of biology. This is uncontroversial, too. The 18th-century clergyman William Paley likened living things to a watch, arguing that the workings of both point to intelligent design. Modern Darwinists disagree with Paley that the perceived design is real, but they do agree that life overwhelms us with the appearance of design.

For example, Francis Crick, co-discoverer of the structure of DNA, once wrote that biologists must constantly remind themselves that what they see was not designed but evolved. (Imagine a scientist repeating through clenched teeth: "It wasn't really designed. Not really.")

The resemblance of parts of life to engineered mechanisms like a watch is enormously stronger than what Reverend Paley imagined. In the past 50 years modern science has shown that the cell, the very foundation of life, is run by machines made of molecules. There are little molecular trucks in the cell to ferry supplies, little outboard motors to push a cell through liquid.

In 1998 an issue of the journal *Cell* was devoted to molecular machines, with articles like "The Cell as a Collection of Protein Machines" and "Mechanical Devices of the Spliceosome: Motors, Clocks, Springs and Things." Referring to his student days in the 1960's, Bruce Alberts, president of the National Academy of Sciences, wrote that "the chemistry that makes life possible is much more elaborate and sophisticated than anything we students had ever considered." In fact, Dr. Alberts remarked, the entire cell can be viewed as a factory with an elaborate network of interlocking

assembly lines, each of which is composed of a set of large protein machines. He emphasized that the term machine was not some fuzzy analogy; it was meant literally.

The next claim in the argument for design is that we have no good explanation for the foundation of life that doesn't involve intelligence. Here is where thoughtful people part company. Darwinists assert that their theory can explain the appearance of design in life as the result of random mutation and natural selection acting over immense stretches of time. Some scientists, however, think the Darwinists' confidence is unjustified. They note that although natural selection can explain some aspects of biology, there are no research studies indicating that Darwinian processes can make molecular machines of the complexity we find in the cell.

Scientists skeptical of Darwinian claims include many who have no truck with ideas of intelligent design, like those who advocate an idea called complexity theory, which envisions life self-organizing in roughly the same way that a hurricane does, and ones who think organisms in some sense can design themselves.

The fourth claim in the design argument is also controversial: in the absence of any convincing non-design explanation, we are justified in thinking that real intelligent design was involved in life. To evaluate this claim, it's important to keep in mind that it is the profound appearance of design in life that everyone is laboring to explain, not the appearance of natural selection or the appearance of self-organization.

The strong appearance of design allows a disarmingly simple argument: if it looks, walks and quacks like a duck, then, absent compelling evidence to the contrary, we have warrant to conclude it's a duck. Design should not be overlooked simply because it's so obvious.

Still, some critics claim that science by definition can't accept design, while others argue that science should keep looking for another explanation in case one is out there. But we can't settle questions about reality with definitions, nor does it seem useful to search relentlessly for a non-design explanation of Mount Rushmore. Besides, whatever special restrictions scientists adopt for themselves don't bind the public, which polls show, overwhelmingly, and sensibly, thinks that life was designed. And so do many scientists who see roles for both the messiness of evolution and the elegance of design.

Michael J. Behe, a professor of biological sciences at Lehigh

University and a senior fellow with the Discovery Institute's Center for Science and Culture, is the author of "Darwin's Black Box: The Biochemical Challenge to Evolution." "Aaron Allen" <nospam@not_here.dude> wrote:
> How do I back up full AVI 720 x 480 2 hour raw
> footage in semi to uncompressed formats to DVD's?

Ah, that ol' chestnut! ;o) I had a video project I did a couple of years back, which had about 4-5 hours of footage all up running DV video compression... so 12 gig per hour. Like you say it becomes near impossible to back up. In the end I authored the video and just dumped to masters. I didn't even have a DVD burner at the time. I had to use HJSplit to split the authored product on to CD's and took them in to work to burn a DVD.

Which, incedentally, may be of use to you. Look up HJSplit. It's a freeware util which splits large files into smaller (say 4.5Gig) chunks. Of all the ones I found it was the only one capable of handling something measured in gigs. Mind you I've never used it to split a 20 gig file into 4 gig chunks, but if you're looking for a method of storing massive files it's probably worth a look. After all it's a free util and only a 1-2 meg download or something.

Cheers,
Kim. "Kim" <hiddensounds@hotmail.com> wrote:
>
> and just dumped to masters...

....which should read "just dumped THE masters"... ie. I only kept the authored version...

....that typo made that sentence really not mean what it should have. ;o) Beat you on that one Aaron. Check down the posts a little.

;-)

>You love to fight, don't you? You've done so many times before on this
newsgroup, if I recall correctly.

You stated that the famous, though somewhat deranged, atheist Madalyn Murray
basically got what she deserved, that her ignominious end was only to be
expected given her belief system, or lack thereof. You were clearly implying
that anybody who doesn't believe in your god is courting such a sad fate.

That is insulting, not only to the many people who don't share your
self-righteous religious beliefs, but also to any sensible person's sense of
social propriety.

Just chill out. It's okay to do so! It won't hurt you a bit, really! Doug
posted a very funny little link that some of us laughed at. There's no need
for any proselytizing...

....or for insults, whether you have the intestinal fortitude to to admit to
them or not.

>I yearn for simpler solutions.....like the Spagetti Monster. Since no one can prove for sure that there is or isn't a Spagetti Monster and no one has anything at all invested in years and years of debating it's existence, or lack thereof, and there aren't yet schisms within the belief system, it can be assumed that the Spagetti Monster didn't kill Jesus, the Spagetti Monster didn't cause the Holocaust and we didn't embark on Crusades to free Jerusalem in the name of the Spagetti Monster. The Spagetti Monster didn't encourage the assassination of Hugo Chavez, enslave the Chinese to opium in the early 20th century or draw capricious borders throughout the middle east in order to suit it's own imperialistic interests. The Spagetti Monster didn't invade Tibet and cause the Dalai Lama to flee or rampage through Tianamen Square killing hundreds of protesters. The Spagetti Monster didn't bomb Pearl Harbor either. The Spagetti Monster didn't slaughter the buffalo, rape the land and exile the native Americans to dirt hovels in the American west. We don't know if the Spagetti Monster is gay or not and we don't care.....and neither does the Spagetti Monster.

It's like a new beginning for all of us.....and what's even cooler is that man wasn't made in the image of the Spagetti Monster so there can't be a big brouhaha about the nature of the Spagetti Monster and no one can dispute the origins of the Spagetti Monster because we've all seen a pasta machine and know it to exist so there can be a general consensus on something finally..

;o)

>You're a beautiful man, DJ.

Actually, seriously, that probably ought to be submitted to the folks who created the Spaghetti Monster website. What you've got here is some of the earliest known theological texts concerning this strange deity. You're an early disciple, writing the what the future will regard as ancient apocrypha of this new religion, this new understanding....

I have been touched by his noddly appendage.

Jimmy

and this information is available multiple sources like I said.

LA Times was the ones that put the information into a nice graph.

I'll attach the full image, per your very special request.

I think there is always credibility to a number of news sources, depending on what they are reporting. Even the LA times. Politically speaking, if you

take the LA times and balance it's coverage with that of any number of other news sources, you are likely to get something approximating reality, but never from just one news source. For me to quote from an approved list would be bogus because I don't have one. I look at numerous sources and try to cull a semblance of reality from different points of view. You post articles here by a single source that happens to support your view. Fair enough. It's suspect though because it's the same old crap every time. I see no attempt at objectivity.....bitch

Exactly. So how do you rectify that with your outrage at my source,
solely based on the source? You want to talk about credibility, yours is
being ripped to shreds, by your own logic.

Keep in mind I'm not a journalist. I'm a person with an opinion. Its not
my job to be objective.

Theres 2 sources of info nowadays. There are people with their eyes open
who see things for what they are, and there are pro-Bush supporters who
would overlook any shortcoming of our coward in chief. And the blind
pro-Bush sheep group is shrinking by the day.

I get the feeling you might just be copping out, but since you seem to be asking me a question, I guess I can spell it out again.

You initially dismissed the simple information graph because it said LA Times on it, then when pressed as to your preferred credible sources, you said LA Times **could** be credible, and that all sources need to be considered and balanced.

So your initial dismissal of the info was the bogus part.

> I've got more important things to attend to today.

If you're gonna backpedal and play games, I repeat my earlier request:

***** NOTICE TO DEEJ *****

You are hereby requested to proved a list of sources which you view as
credible.

I will quote stats only from your approved list...

You've failed once now to step up to this request, now's your chance to save face.

Your other option is to stop shooting the messenger.

Either way, don't expect your criticism of a source solely based on the name on the building to carry any weight. Kanye West said it-Bush doesn't care about Black people let alone poor black

people-Then it again Bush is just a name-It's what he represents-rich affluent america. The man was grew up with a silver spoon in his mouth. His own father is appaled at the CIA outing-he has these miserable people like Karl Rove in his employe and like I said he saw the devistation from the comfort of air force 1

Please read the editorial in the Most Conservative paper in the country in New Hampshire-When they bail on Bush this signals trouble ahead-and they bailed Big time

JM"Jason Miles" <JMiles45@aol.com> wrote in message news:431b39f3\$1@linux...

Thats my hometown man.... Alternately known as The Union Leader / The Useless Leader.

Either way it's the #1 paper in the state by far and almost 100% conservative i.e. Pro Bush 1 / Anti Clinton... always Pro Republican senators and Anti Democratic governors.

Nackey Loeb has taught me a lot about politics.Sorry amigo. I never failed to do anything other than play by some arbitrary

rule you have tried to esatblish here. As I said, I listen to many sources.

I sometimes form opinions from one or a number of them depending on whether or not they make any rational points.

You won't see me dancing to your tune.

LOL... thats the funniest shit I've ever read.Guard's in Iraq, but it's needed here

By CARL HIAASEN

New Orleans is now nearly as dangerous and chaotic as Baghdad, where about 5,000 Louisiana National Guard soldiers have been helplessly watching the hurricane tragedy back home on television.

Their presence would have been mighty useful in deterring the looters on Canal Street and restoring order, but that task now falls to a better-late-than-never coalition of Guardsmen summoned from other states.

The same is true in devastated Mississippi, which has a state National Guard brigade attached to the II Marine Expeditionary Force in Iraq. As a result, two battalions from the Alabama Guard were ordered to back up the 1,600 Mississippi Guardsmen who've been mobilized since Katrina struck.

It's another high price to be paid for the woefully mismanaged war in Iraq -- the cities of our own homeland have been left to fend for themselves after catastrophe strikes.

Everybody in south Miami-Dade who went through Hurricane Andrew in 1992 well remembers that the turmoil and lawlessness subsided only after the National Guard arrived.

Although it took too long for the main force to get here, the problem wasn't a troop shortage caused by a contrived faraway war. The problem was a sluggish government response.

Once armed soldiers were finally posted on street corners, most of the looters lost their nerve. Those who hadn't already stolen a VCR or stereo speakers suddenly decided they didn't need them.

Among law-abiding citizens, an atmosphere that could almost be described as

calm set in when the Guard took over the job of distributing food, water and ice. Surely no sight was more comforting to the desperate thousands who'd felt so isolated and forgotten in Andrew's dreadful aftermath. Yet nothing we experienced here in South Florida compares to the widespread bedlam and despair now gripping New Orleans and other areas of the Gulf Coast. Katrina made Andrew look like a pipsqueak.

On television the scenes are virtually too staggering to absorb, crosscutting from those breathtakingly heroic rescues to the almost-casual rampage of looting.

To snatch from a shuttered store a few boxes of food, medicine or clothes for one's family is nothing but an act of survival; loading up on DVD players, jewelry and firearms is pure idiot thievery.

By this weekend, up to 30,000 National Guard troops from the coastal states and around the country were supposed to be heading toward the Gulf Coast. That's not nearly enough.

The disaster zone is simply too vast (99,000 square miles), too ravaged and too far gone toward anarchy. What's needed is basically a domestic army of occupation.

As late as last Thursday, there were only 2,800 Guardsmen on the ground in New Orleans. Yet the U.S. Central Command said there were no plans to shift U.S. troops from Iraq to Louisiana and Mississippi.

That means recovery will depend on Guard units borrowed from other states, which are already stretched too thin. It's a shaky plan, especially with three long months remaining in hurricane season. The chance of another direct hit on the U.S. mainland is not small.

As we Floridians know from our multitude of weather crises, recovery can't >LOL... thats the funniest shit I've ever read.

No it is not the funniest shit I've ever read
JM

>

>[FEMA], run by Brown since 2003, is now at the center of a growing fury over the handling of the New Orleans disaster. ``I look at FEMA and I shake my head," said a furious [Republican] Gov. Mitt Romney yesterday, calling the response ``an embarrassment."

Newt Gingrich, the former House Speaker, is among those who have asked whether Bush's Department of Homeland Security is up to the job. 'If we can't respond faster than this, then why do we think we're prepared to respond to a nuclear or biological attack?' he pointedly asked.

For real...

I meant to say that in parenthesis. Hey all,

The problems this disaster has exposed go way beyond anything the federal govt. or the president have anything to do with.

Entrenched, multi-generational corruption, patronage, cronyism, ticket-punching bureaucrats, incompetence, cowardice, and more corruption, all of it at the local and state levels is where the primary responsibility lies.

No president, from any party, would have done a lot better. Sorry.

Kanye West is as dishonest as can be, and he, and you, Jason, are race-pimping the blame where it does not belong. It is despicable and pathetic. There were BLACK heroes all over NO, who, without fanfare, a new SUV, or any bling, went around saving lives, getting people out of attics and off of roofs. Others, faced with the same needs and opportunities to serve others, instead became evil predators, and scum like Kanye and other race-pimps excuse them, EXCUSE them, with their hate for the president. It's just like the Rodney riots, some do good, some do evil, but instead of condemning the evil, the race pimps excuse it and blame the president.

Understand this: I care much less about the insults and lies told about Bush than I care about the great, big-hearted black people who have now become invisible as these shitheads excuse the thugs.

You can't praise the heroes without acknowledging that black people have the ability to choose love and righteousness in a time of evil, so heroes are ignored so the race-hustlers can take another dump on the president.

Shame on you.

If Clinton was in power, hell if Giuliani was in power, we certainly would have had a more inspiring leader, and that is important, but things would still be about where they are right now.

The hate of you guys. The pure hate you are showing. Man, you should be ashamed of yourselves.

Find a good charity, give of yourselves. Make a difference.
