The problems this addresses were really bothering me.

I locked the Scherzo to one CPU, and I was still having command queue errors when PARIS was not locked also. I haven't had any problems at all with this build.

Next stop, Scherzo.

:)

>Hi Dimitrios,

Thanks for the update. I've been thinking a lot about that. Would you mind
running a debugger and sending me the output? I'll post debugview when I
get home if that works for you.

Just to confirm:

Submix 5 doesn't play. If you solo Submix 5 it plays. If you then unsolo
it it continues to play.

Thanks!

Mike

what you need. I picked one up a couple years ago to pack on my goldwing for
trips.
I didn't want to pack one of the fluke meters.
at least you will get a reading instead of guessing what LED brightness is

Hey guys and gals, just wanted to share that I will be doing a Christmas tour with Will Downing, Gerald Albright and Lala Hathaway. Here's the flyer...dates are being added. I'll try to keep you posted.

>Hi Mark,

I just got back home, saw your post and checked out your samples. You ask'd us to be critical so don't even think for a minute that I'm diss'ing you. This is some good music. New, exciting, authentic and more. I'm not a pro studio engineer. I'm your average Joe, trying to make a go of performing and recording at home. I favor rock and blues, pedal steel county and old motown. Our tastes may not coincide. I do have good ears, but what I comment on is my taste. You may have a need to cater to a specific audience or customer.

So, with that said, hear is what I heard.

1st great performances on every sample. Nice recordings and mixing chops too! Great variety.

Wonderful rhythms and patterns. Tight performances. Perfect stereo assignments. Very open mix's. These are quality samples. The musical genre sampling is superb. I dig your funk. Your classical is interesting. Your gtr leads are excellent and your strumming is tight with the band. The bass player and drummer groove well. Your musical samples capture me.

But, without further ado . . . the other side:

Acoustic samples - nylon tone is totally real with perfect reverb, but, if real critical, just a touch over. Steel string leans towards a more electric than acoustic tonality. I'm not sure why. The lower strings and middle register sound more electric than a sound hole tone. However, the upper two strings sound real (B and E).

Bass samples - on the rockin' and funky tunes the bass is tight, clean, fat and perfect in the mix. On the mellower stuff I think it could be a bit rounder. You know, the type of sound you get with brand new set of round wound strings. A clarity and fullness that surround you. On "aint" it sounds like the snare is gated off too quickly.

Keyboard samples - B3 is awesome. I'm not a fan of that particular electric piano keyboard patch on the lead. It's got a strange attack and to me feels brittle. I hear it a lot in R&B and some jazz, but I still don't care if. I feel as though a true piano patch would fit in the song just as well or maybe something more in the lines of something Billy Preston or Ray Charles might try.

Lead and Rhythm samples - Your mix's are very open. I feel as though you have room to thicken the electric gtrs, both lead and rhythm. I also heard this on the above samples too. Although everything is clean and clear, a bit more low end would warm them up some and give them substance. And you are playing great stuff. Your drums and bass sound huge. Great tone on the wah in all instances and that's tough to do.

Vox - nice placement and levels. The background vox's really surround the mix.

So that's it. My kneejerk reaction. Keep doing what you are doing. It's great stuff.

Sincerely,
Wayne Carson
Paris since '97

>www.adkproaudio.com

>chrisl@adkproaudio.comWayne, my thoughts exactly on the acoustic and bass stuff. The truth about those acoutstic and nylon clips is that a couple of years ago, frustrated that despite haveng been asked for over 20 years "when are you going to do your own album" I had never done one, I sat down on a Sunday afternoon in the control room with a single SM57, an acoustic guitar belonging to a friend, my nylon, nothing more than a coupe or three 8-bar phrases in my head that I would gravitate toward when I would pick up an acoustic. I wrote/recorded those tunes sitting in that chair in one day with almost no attention paid to the computer running in the background, my playing technique, mic position, mic selection or any of the usual clinical kinds of things one does when recording. No punching, no doubling, no tempo maps, none of that. Tracked bone dry, mixed bone dry, compression only, one setting for every title. Mastered back to PAIRS through my old Ibanez SDR1000 with one verb setting for the whole record. I had my first 500 CDs within 7 days of beginning the project. In other words... didn't spend any time on it. There are some 'embarrassments' on that thing but interestingly, all my musically inclined cohorts like the realness of the

thing and threaten me when I use the words "remix" or "redo" so.... it is what it is. And I agree with you totally about the sound.

Great comments on the bass stuff.... Peavy Cirrus and yes, I think it came out a bit undefined but it was an artist call as to tone. In fact, all that bass stuff was recut after the entire album was done. The band, IC3, lost their basis mid-project at another studio. IC3 decided to recut bass tracks and I got the call. Nothing like jacking up a house and trying to pour a nice new smooth concrete foundation under it.

I got some more stuff I'll be putting on shortly... getting my site up and trial running meantime.

Totally dig ALL your comments Wayne... exactly what I was looking for. Thanks man! Mucho appreciato

> MikeMike, it's just amazing to see this. This is every bit as much a landmark moment for the "post-discontinuation" life of the platform as porting Scherzo to XP was in the first place.

It raises a bunch of questions - did you decide to take it "object oriented", or are you concentrating on cleanup? How deep are the design changes?

And aside from the aesthetics - meaning the "objective good" of cleaning up dodgy or outdated code - what are your end-goal aims? What do you hope will be addressed or enabled as far as end users are concerned?

- Kerry

>MikeHere's the deal: I record myself in Paris alot playing my trumpet. I use
a Beyer 260 ribbon mic that was worked on by Steve Sank. He put a 77-DX
ribbon in it to make it sound more like the vintage RCA 77-DX. He also modified
my Apex 107 preamp to sound much quieter and beef it up (but not the gain).
It all sounds really good.

One of my problems with recording myself though, is I really can't just close my eyes and play. I watch the input levels in Paris and move myself back a little from the mic when I am going to play louder, and move closer when I play soft and whisper. Watching the levels guides me so I not only don't get too many overs, but gives my low level whispers more natural gain (and a little proximity effect to fatten the low levels).

I never used a limiter or compressor, since I have read that they pump and breathe and inject too much unnaturalness to the sound..... butI have no experience with this so I don't really know.

I am starting to get a little tired of having to watch those levels and was wondering if I did put a limiter or compressor on the mic, will I really get all that unnaturalness and unwanted noise? You guys are engineers and record a lot of people and I don't. What is your experience and opinions with this?

Also, in searching for a decent, yet inexpensive compressor/limiter that might fit the bill, I came across the FMR "Real Nice Compressor." They also have a \$400 mic pre that seemed like it might be real good for a ribbon as it has a lot of gain.'

Do any of you have any experience with the Real Nice Preamp or Compressor?

They both got very nice reviews from magazines on line. I have not seen them mentioned here before, but I could have missed it.

Thanks

Lou Guarino

www.enchantedvibrations.netLou

A few years ago, the RN compressor line was pretty much all that was spoken about.

They are worth looking at, definitely.

You should definitely be using a comp/limiter with your recordings, you'll never look back.

> www.enchantedvibrations.net Hey Chris, is SSL going to show the MaDI Extreme thingy you
weretalking about
a few months ago?

I ask because mega producer Teddy Riley has jumped on-aboard with using SSL/Sadi
interfaces in his Neko DAW Keyboards aong with Nuendo. Teddy states that
theSSL interfaces sounds wonderful.

I took a look at the 2 SSL madi cards (64 & 128 channel) versions. The 128
version in on one card! If they can pull this off, with the their Duende
plugins and Mixer interface.. Then, move ovr UAD2(s)..

I agree with Martin. I have a couple of RNC comps in my gig rack.
I like them alot for transparent compression. They also can mimic the
aggressive compression the Distressor displays in 'Nuke' mode if you
work it that way. It was easier to setup than a pair of Distressors that's
for sure.

I have been using ribbons as of late on trumpet and always apply some
protective compression through a Distressor. The RNC is about 1/4 the
price and can do the same thing with the same or better bandwidth. You can
still work the mic if you like but will be protected from overs once you get
your settings right.

Good luck,
Tom

You don't happen to have Chucks "PC Freebies" plugs installed do you? If so,

get rid of them and try it again.

>
> Thank for letting me ramble.
>PN,

Thank you for the tip.....you were right, the freebie pack was causing the original compressor not to pass audio.

I have also found some interesting things out.....not that I know the answers, but I thought.....no better place to share then here....I hope someone can get to the bottom of this.

I feel like I have tried almost everything I can think of.....and I still keep getting an unhandled exception error.....but since I can now use the original Paris compressor.....it now appears to only error when I use the 3rd instance of the new "Paris Compressor", and only on the 3rd EDS card. I have successfully used 8 instances of the "Paris Compressor" on the first 2 cards

The other 2 cards work fine.....or it seems, but I haven't really focused on them because of the 3rd card.....I will next week when I get back in town (gone for a week)

When I use the original M > M Compressor, I have great success, and no

unhandled exception errors.....and I have replaced the 3rd card with 3 other cards and I get the same problem, so I don't think I have a bad EDS card (I have 6 total card, so I swapped out the third one three times). I guess I could try card number 2.....does that sound like it could be a possibility....does the card have to pass any instructions to the next card that might cause this lock-up?

By the way, sometimes, I don't get the error. Sometimes when I insert each "Paris Compressor" on the channel, and then open them up to adjust them or to load a preset (instead of just inserting them without opening them).....sometimes on the third instance I get the plug-in window where you choose what plug-in you want, and I cannot click the OK or cancel button.....the button depresses, but the window will never go away.....no matter what.....I can't even end the process with task manager.....I can only close out Paris, I can't end the process that is choosing the effect.

Any Ideas???.....I hope this helps Mike.

I was thinking that it might be another developed plug-in, but I didn't really want to start taking them all out.

Can anyone else duplicate this problem?

This is on my new XP-Pro Core-Duo machine. I am downloading the new PSCL tonight, but I get the problem even when I run only one processor for Paris, so I don't think that is the issue.

If anyone else has a 3 or more card setup on an XP-Pro dual core machine, I would be interested to see if you have the same problem, or even a similar one.

At least I think I can move on somewhat.....My studio is such a mess with all this stuff laying around because of trying different things. I want to test it a little more, and if it is "just" the new "Paris Compressor", I probably can work around it for now.....I just want to move on.

Maybe someone else has some input or ideas.

Thanks for listening.

>Hi Kerry,

The Scherzo is a perfect and efficient design as long as you've only got one cpu. I'm almost certain I've found the multi-cpu bug in the scherzo. It's complicated, but it relates to the app enabling an interrupt on one cpu when it needs to be masked by another. When there is only one cpu, the app can't do this because the Scherzo is running and blocking out the app. With more than one cpu, the scherzo expects it to be the only thing running, and the other cpu messes up its operation.

It's really a minor redesign, but it's a big deal for me because I've never

worked in kernel mode before.

I'm going to do it in two stages.

1) move the DPC code into the ISR, which means I will have to use the interrupt spin lock to guard the various queues.

2) replace the queues with newer designs that will allow for not using the interrupt spin lock all over the place.

3) (maybe) break up the work of the old DPC and put some of it in a new DPC to improve system efficiency (this might not be necessary).

It's tricky stuff, but we'll get there.

All the best,

Mike

suppose the directions will help. Or would they work better with the RNP
preamp?

OK, at the risk of sounding stupid, I never heard of a distressor. What
is that?

You know, since I never used compressors, I have no idea how to set them
up and use them. Any good articles online that might help me get started?

The current one runs fine except when I go to close PARIS it restarts my
computer.

Thanks, it's been a while since I posted here.

>MikeHi Lamont,

Yes they will be showing them there. Not sure if they will be showing
ofr announcing the MX4 (Madi Extreme w/Duende on board) but they will be
showing the Madi Extreme 64 and 128.

The Madi Extremes do work well. They sound better than anything sense
they are digital. :)

If Teddy is using the AlphaLink AD/DAs then yes they do sound awesome.

The Madi Extreme do not have Midi I/O which the only thing I don't like
about them. They are excellent otherwise.

Not as flexible as the RME stuff but if some one is already using a
console the extra features of the RME stuff wouldn't normally be needed.

As long as SSL offers stability, support on par with RME then they will
have a very successful product and make buying Sydec finally worth it.

The SSL MX4 won't be competition for the UAD-2 but will be an awesome
combination.

I think it will make the TC world allot tougher and even the regular
Duende will seem kinda pointless unless they drop it's price allot.

>Hi Josh,

It sounds like you need the "minimum setup" installer that Chris Thoman released several years ago. That fixes the crash on exit.

I'm working on it to make it work reliably on multi-cpu computers (like mine!)

All the best,

Mike

>I've been doing some mixing, and have been trying to do some parallel compressing using Mike's version of No Limit with another track. I've noticed 2 things.

First, the latency is different than Chucks original version. With the lookahead set to 25 ms (which is where I usually put it, I haven't tested other lookaheads on Mikes pulg yet)to get Chucks No Limit sample accurate I nudged back 27 ms (25+1+1) in Paris (at 44.1)

and set sampleslide to 78 samples. This yeilded total cancellation with the source track. With Mike's No Limit, set to 25 ms, I have to back up only 25 ms (the 25 button) and add in 16 samples on sample slide to cancel.

One other interesting thing worth noting is cancellation happens at "0%" and "93%" on the mix knob, assuming both channels are set to the same level.

If I go to 100% on the mix knob, cancellation happens when I raise the fader of the Nolimit channel to 0.9 (the comparason channel is set to 0)

Interesting, but not an issue.

The latency change is worth noting if your doing some Parellel compression or compressing some phase coherent mics, like in a drum kit.

Enough geekdom. I must get back to mixing.

Rod<http://www.actrix.co.nz/special/cyberclean.html>

this may particularly appeal to DJ, with his complex computers, and his unique interests...

-steveThanks Chris..

>Hey,
Sorry need to vent for a sec after talking to our Digi rep.
Wow looks pretty impressive. It's jammed packed with work flow improvements and features that
we've had in Cubase, Nuendo for 6 years, Sonar for 3 years,
Samplitude for 2 years, Saw Studio... oh never mind, Logic for 1 year. Oh still no plug in delay
compensation.
I love the revolutionary idea of Satellite Link

Control multiple Pro Tools|HD systems from one.
Satellite Link is a powerful software option that allows you to synchronize and control up to five Pro Tools|HD systems as one, with near sample-accurate lock, from a single transport. With multi-master transport and solo-link capabilities, and support for the new Video Satellite and Video Satellite LE options, Satellite Link is the perfect solution for post-production and music environments with multiple operators and multiple Pro Tools|HD systems.

System Link anyone?

The Avid Video interchange at least sounds like big improvement sense PTs interaction with Avid has always been so piss poor which is funny considering the the relation....

Well on the bright side if some one buys the Complete Production Toolkit they will have some approaching the value and functionality of Cubase, Nuendo, Sonar, Logic, etc.

Chris

Looks like they took a lot from Logic Pro.. finally a dedicated midi editor and score editor. The lack of that has kept me from PT and in Logic for the last few years. I'm not sure if that's enough for me to switch back though.. I'm currently running Logic Pro/TDM, and will soon be running tracks to Paris again for mixing..

Cheers,

TC

Nuendo digital performer cubase sonar.

On the other hand, the Roland/cakewalk marriage seems to be
Paying dividends. sonar 8 with it's and very cool mixer controller
Along with io interface with a phantom g 128
voice synth. Killer.

>Hey folks,

I have two ADAT tapes that we used to record a live gig my band did. It's eight tracks on each tape, so it's sequential. I.e. you'll have to run two ADATs through your system.

I need them transferred to sample locked .WAV files. As I'm sure a few of you still have ADATs synced to PARIS rigs I thought I'd see if anyone wanted the job. Extra credit to anyone who can deliver me Cubase SX 3.x project files that will work on XP, but that's not a huge deal.

Thanks,

TCBI can probably help you out but not with a Paris rig.I have 3 adats(2 XT & 1

XT20)

I could sync adat via midi timepiece AV's pipe to madi straight into SX3 or C4.

I'm in Waterbury so we are almost neighbors.

Only problem is I haven't set up the motu pieces yet.

I'm dreading the midi spaghetti tied on the studio 5LX
plus waiting for Morgan to deliver a wordclock generator
so I only do the tear down /rebuild once .

are you in a rush for this?

chrisl@adkproaudio.com hey everybody. my athlon xp 1800 system i built for paris in 1998 finally
died! i need a new computer that will run paris and am wondering what my
options are? i saw some \$200 pentium 4 3.4ghz boxes but they have pci-e
slots. will one of these work? i still have my windows 98se disc :)

thanks!

-davidthe clock has been on order a while. Like I said I just don't want to slither behind the racks but once if I can help it.

>Hope so...Heya Kim - how's it going over there? You had us worried!

- KerryHi Mike,

I really like Paris EQ for most things. Cambridge sounds sweeter to me across the board. Hi end is less strident and the low end isn't flabby like Paris'. Pultec Pro is a one or two trick pony for my use. It really has a sound of it's own.

Try boosting while cutting at the same time. That's when it's curves are most noticeable. I like it for aggressive Kk, toms and bass once in a blue moon too.

Paris EQ sounds really good in all of the above situations but doesn't always excel when compared to the best plugs imho. I agree that the UAD EQs need some getting used to to find their application. Check out the Fairchild sometime. Wild in how it can impart that Beatles slammed ride cymbal sound heard on some of their tunes. Character is what those guys are about.

TomLooks like it!

Cheers,

-Jamie

><http://news.bbc.co.uk/2/hi/science/nature/7665747.stm>Just announced today. Anyone actually
seen one?

Looks nice.

DCGreetings,

As my fancy new Quad core audio uber-boxen has only one PCI slot which is my Pulsar card (still love that little bastard) it appears I have to get a UAD-2 for all of my Roland Space Echo and Helios EQ goodness.

Universal Audio is running LIMITED TIME promo where they will oh so generously not make me pay for the plugs I've already paid for a second time. Might Microsoft of them if you ask me. Post 12/31 I'll have to pay for them again.

Anyone here have opinions about these?

TCBHi Thad,

I hadn't looked into the UAD-2 proposition yet. From what you're stating I'd say jump. No question about it. I have to assume the sound quality is the same. I'm in the same boat as you with a quad core. Too few available slots in the PCI-e world is more the problem these days for me.

I also love my Scope card. I am running Paris and Cubase together in this box,
or will be soon.

I'll probably get the UAD-2 Dual. That will be way more power than I'll be needing

with Paris as the mothership. I rarely run out of resources with one card as it is.

The multi Neve setup must be great though huh? I have a couple of Neve pres that get most of my overdub tasks so I'm not itching for a lot more of that sound here.

Are you feeling had by them forcing the new card on you? Get a Magma and a few

UAD-1s then. Might cost the same but you won't have been had M\$ style.

I'm a sheep all the way on this one.

Tom

I hadn't looked into the UAD proposition yet. A su

construction. If it's even more rugged, great!

But I'm glad I didn't wait to get my 17", since, for now, that model
hasn't changed (except for some new drive options).

As for the 15" model's other changes, on the one hand, black around the
display could be an advantage, perhaps less distracting for graphics
work. OTOH, it looks weird on first glance since the body finish is
still metallic. They also dropped the matte option for the display,
which is my preferred option.

Dropping firewire support for the non-pro MacBook is also a surprise,
and not a good one.

So I'd have to give today's announcements a mixed reaction.

Cheers,
-Jamie

The things I like about the UAD kit are the 1176 and Helios EQ models. And the Space Echo but one only needs a few of those.

I'm still annoyed that uadio is acting like they're doing me a favor by upgrading my already purchased plugs for free. But whatever, I don't really have a lot of choice.

>Hi Jamie,

Will also have to see how the no firewire on the mac book plays out.
Sense it does not have an express slot there will be no chance of adding one.

The 15 MBP 15 only have the 800 firewire port.

Intel is pushing them away from firewire i think for USB and for the upcoming USB3.

Virtually all of the new mid-priced and low priced PC notebooks which what the Mac Book and Mac Book pro are made do not have firewire on board.

Intel has actually made it so that on the new chip sets you would only be able to add firewire via express slot device.

Much like the internal wireless cards.

At least the 15 MBP like the many of the PC notebooks have a express slot so you can add a express firewire card.

The new LED screens are fricking cool.

Can't wait to see the new LED LCD Cinema Display/docking station they are making for the notebooks.

True. Which means I wouldn't be able to use one of those with my current studio audio interface. But I could use it with my portable interface which is USB.

> The 15 MBP 15 only have the 800 firewire port.

It can do firewire 400 with an adapter. But I gotta say having both ports on my 17" MBP has been useful.

> Intel is pushing them away from firewire i think for USB and for the
> upcoming USB3.

Here's my armchair quarterbacking (disclaimer, I'm not a quarterback and I don't actually have an armchair): It can't cost that much to include it. If I were Apple, I wouldn't make the change before USB3 is available. I could see making the choice when they could include USB3, but dropping FW altogether now is an odd choice.

Unless they want to push Final Cut/Motion people toward the higher priced MBP now that the graphics are improved in the MB. A blatant marketing decision if so.

> Virtually all of the new mid-priced and low priced PC notebooks which

Do you mean PCI-x or PCI-e for a firewire?
This a desktop or laptop?

Here are the ones we use that seem to be compatible so far.

PCI-e cards

<http://www.siig.com/ViewProduct.aspx?pn=NN-E20012-S2>

http://www.sonnettech.com/product/allegro_express_fw400.html

Express card

Yes that is very nice. But hop you never need to change or upgrade you ram. It is located underneath the keyboard.

You need to dismantle the whole laptop to get to it.

Not there choice to make. It's Intel's choice. They see no point probably in spending time on some thing that 0.5% of the consumer/business market use.
If not including means low power and cost then they will ditch it. Of course Intel is one of the main people behind USB so who knows what their motive is.

>
> Unless they want to push Final Cut/Motion people toward the higher

Yes they do want the "Pro" to use the MBP and I think they want them to just use the 15' and then buy that the LED display for it to edit with so they don't need to bother with a 17" model.

Apples market growth is in the consumer world so expect to see them paying less attention to the "Pro" market. Those people only buy computers every 3 to 5 years. \ Apple would be out of business if thats the only market they had. :)

Apple is at the mercy of Intel as much as any other computer manufacturer.

If you go the local Best Buy and look at all brand new low and mid priced notebooks you will that they are basically the Mac Books sans the fancy touch pad and LED screen.

Apple's computer parts like everyone else are made buy a handful of Chinese and Taiwanese manufacturers.

Quanta and Foxconn being the main ones that work with Apple.

Apple has a fab plant that they got from HP to make the MB and MBP but that is for machine the snazzy cases and assembling the parts.

Not sure if I would say it's Intel's fault. Probably a smart business plan for them who ever buys their stuff.

Remember now people have to come out with USB and express card based video and audio devices to replace firewire ones.

Which people need to buy now if they want a new Apple and for that matter Dell system.

Isn't capitalism neat.. :)

thad,

I'm running 4 x UAD-1's and a UAD-2 Quad here. The license for your existing plugins will transfer to the UAD-2. Some of them just haven't been coded for the UAD-2 yet.

Having a quad borders on the ridiculous. I haven't thought about running out of DSP in a couple of months. You'd be surprised how you can muddy up a mix by using 12 Neve 33601's.

;)Martin Harrington wrote:

That's good to know. Do you have have a good link for instructions to follow?

I expect to do it eventually, either to put in a bigger drive or perhaps a solid state drive. Won't need to do it for a while, though.

But with the newest MBP design it looks like it would take less than a minute. With that setup, I would consider changing out the drive much more often. For trips, for shoots, for gigs. That's a useful improvement.

Yep, the 15" is a more portable package. My old PowerBook is a 15" and I like that size. But I am enjoying having HD video resolution wherever I am with the 17" - it rocks. It's been worth the small extra weight penalty for what I do.

OTOH the pros buy the big iron and pay the big bucks. :^)

Heh. Good old planned obsolescence.

That's something I managed to avoid with audio interfaces after PARIS by

buying a FW audio interface instead of an internal-card-based one. My FW interface has lasted through three computers, not bad. But it wouldn't work if I got the new MB.

I'm just starting to think about express card add-ons for my MBP. Do you happen to know if anyone make an express memory card that's fast enough to keep up when recording DV or HDV to a tethered MBP?

Cheers,

-Jamie

www.JamieKrutz.comHi,

I would love to use them in my projects but as I told you the release option has problems.

YOU COULD also IF POSSIBLE update the stock compressor with the your new developed knob switch for RMS limiting !!!!

Please use a stock compressor with only the RMS way of compressing as not to make them heavy dso loading !

Thanks

DimitriosHi Dimirios,

Could you elaborate on the release problem? I'll get to it as soon as I can. I'm buried in work right now.

All the best,

Mike

I might be looking at this from a simplistic angle, but... isn't a car the worse possible environment for listening to music? It's a noisy space, and is grossly asymmetrical (the listener is, by definition, closer to either the left or right channel). I would have ventured a guess that the best you can do is (a) compress the sound in order to cope with the road/wind noise, and (b) find a semi-decent stereo that gives you just enough tweakability to achieve acceptable results. Anything beyond that is wasted, is it not?

Having said that, I'd be curious about others' opinions on car audio...

DanHere's how I'll be addressing the stereo issue in my truck.

<http://www.lmctruck.com/ICATALOG/FB/full.aspx?Page=71>

>ThanksWell, I spend a lot of time in my car and want it to just give me a balanced even stereo image and some nice eq capability that I can easily change from album to album.

Yeah, cars are tough but I want something better than the crap I have. That headliner is too high for my taste. I'll probably put something on the dash and just aim it. I really don't care at all how it looks, I just want it to give me a great stereo image sweet spot.

John

JohnHI Jamie,
When you say express memory card do you mean a solid state disk?

chrisl@adkproaudio.com HI Thad,
Oh ok. Its an old Dell Xeon system?

The only direct PCI-x firewire card I know of is this one.
<http://www.sonnettech.com/product/allegro800.html>

Not sure if it works well or not.

Most current 32 bit PCI firewire cards should work in the PCI-x slot.

Chris

chrisl@adkproaudio.com you forgot all the reflective glass involved at different angles too.
You can make 'em loud and somewhat flat, but sweet spot is pushing it pretty
hard, really.

Here's an interesting one;

<http://www.eclipse-web.com/cd/cd7200overviews.html>

DCHi John,

The only thing I do is make the left speaker one notch louder because as I
sit in the driver's seat I hear the right speaker more. It helps balance
the space for me . . . the driver.

directly at my ears instead of at my ankles. Turns out my ankles can't hear
shit !

JohnNot 'old per se, but yes a Dell quad core Xeon system. It was cheap and the
chipset is reported to play nice with my Pulsar card. And I got a deal because
I'm an educational buyer.

I've never tried the PCI card in PCI-X thing. It just seems backwards to
me as a geek, but I probably shouldn't think that way. God knows there are
enough 32 bit PCI firewire cards out there.

Lend An Ear Soundi don't think it's legal to drive with headphones, though that's really a fantastic idea Martin. I could get killer sound (if i don't get killed) with perfect stereo image. hmmmIt's illegal in California at least.

You could always get a power inverter and run one of these between preamp and power amp:

http://www.bssaudio.com/productpg.php?product_id=31

Don't laugh, I've considered it...

a

>fantastic idea Martin. I could get killer sound (if i don't get killed)

>with perfect stereo image. hmmmHey, who do you guys like for a FW/USB external drive enclosure?

TIA

DCWell, the old G3/800 iBook has finally died. It went back three times for the extended warranty logic board problem, and recently it died again.

It did not look like a logic board issue, it looked like a failed HD.

So I went to

<http://www.ifixit.com/>

a most cool site with diagrams on how take macs apart.

12 pages of pictures and disassembly later, I swap the drive out for a new one, and put it all back together again.

And...

Nothing.

It's dead. Will not boot, will not find the drive, will not startup on CD from the OS disc, will not startup from Apple hardware test CD. Nothing but blinking "cant find system folder" icon.

Tried all the pram resets and single user mode tricks. nada. Once it booted halfway up and then totally froze up.

Logic board. A used one is 350 installed and it will die in months. They all do.

So, time for a new laptop. My question is, does anyone here need some parts for an iBook? Ram, CD drive, nearly new battery/power supply?

let me know

DCBTW these nutjobs took apart one of the new unibody Mac Book Pros... Take a look:

<http://www.ifixit.com/Guide/First-Look/Mac/MacBook-Pro-Unibo> dy

DCMany years ago I rip'd out the manufactures stereo system and put a new stereo, a pwr amp and a pair of dual cone speakers in my Toyota P/U. The pwr amp made all the difference in the depth, fullness and power feeling. Although not a studio, at least it filled the cab with full range pwr and depth. It was just a single pwr amp, not the kind of pwr amps that need an extra car battery and a trunk full of woofers. Simple yet round and deep. \$300 bucks back in 1977.

The fastest SSD drive which is being made by Intel atm is about as fast as a 133 drive in actual performance.

The life span of SSD drives is also lower than standard hard drives.

It might be able to record a few tracks though. They are very expensive still though.

You can get a 2 port Esata express card and use external SATA drives to get far greater performance for the money.

Chris

Is this in express card format or a solid state version of an internal SATA drive?

What I'm wondering about are removable solid state "drives" or flash cards that plug directly into the express card slot. Express card media.

Here's an example I found (32GB), but I don't know if it's fast enough for direct video recording on the laptop (camera connected via Firewire):

<http://ec.transcendusa.com/product/ItemDetail.asp?ItemID=TS3 2GSSD34E-M>

- > The life span of SSD drives is also lower than standard hard drives.
- > It might be able to record a few tracks though. They are very expensive
- > still though.
- > You can get a 2 port Esata express card and use external SATA drives to get
- > far greater performance for the money.

True, and that may be an option. The drawbacks are that external hard drives are bulky, make noise, require connecting with cables (possible points of failure) and are somewhat fragile for on-location use. Which is one reason I'm curious about the current state of solid state express card drives.

This would be used for video recording via Quicktime Pro or with dedicated video recording/monitoring software like Scopebox. One situation where direct laptop recording may make sense is when doing interviews.

Cheers,
-Jamie

>> DCHi Paris people,

A friend's Paris rig is booting up with this file missing.
StockFx.dll

He has to click it away five times to get Paris running.
Is there a fix for this? His system has been unstable
as of late. Maybe this is the reason?

Any easy tips? He's not a computer guy any more than
he has to be.

TomDon't know this is of any help:

[http://www.kerrygalloway.com/WikiPARIS/wikka.php?wakka=BugsT roubleshooting](http://www.kerrygalloway.com/WikiPARIS/wikka.php?wakka=BugsT%20troubleshooting)

[http://www.kerrygalloway.com/WikiPARIS/wikka.php?wakka=Stock Fx](http://www.kerrygalloway.com/WikiPARIS/wikka.php?wakka=Stock%20Fx)

"The application has failed to start because StockFX.ini was not found..."

If you've installed third-party EDS plugins, make sure that you've including the section pertaining to file path information.

If it's not that, once the smarter folks chime in on this I'll add it to the Wiki.

If so, make a backup of the Paris map as a zip or RAR file a place on
the harddisk or burn a CD with it, just to have copies of
"Paris_fx.var" and "Paris.cfg". Uninstall Paris and delete the
E-mu\Paris pro maps before a clean reinstall. If it's a WinXP
installation, be sure to follow the XP-prosedyre and also have a look
at Mike Audet's updates for modern WinXP computers.
Good luck

>Hey Tom, I wouldn't worry about too much Neve sound with the Neve EQs

and compressors. I used to have a 3360 comp and its sound was very warm, sweet and luscious. Using Neve pres and EQs and comps together is not like putting chocolate syrup on chocolate ice cream (actually, that sounds good). In fact they were designed to complement each other in a console, by one of the best audio designers of all time - you won't get a Neve "buildup" problem.

I don't doubt Rupert builds in a beautiful sound into almost everything he touches. Oddly, I had a hard time liking the Neve comp (UAD) when I gave it a spin. It seemed difficult to setup for seemingly not a huge audio gain. I'm sure I missed something there. It's cpu hungry tendency drove me away. I do like the Fairchild although rarely and frequently use the La2a and 1176.

I have heard engineers complain of the Neve buildup issue regarding consoles though. I like to use the hardware Neve pres as spice to bring some more attention to certain tracks.

If I get the UAD-2 I'll have the resources to try the Neve comp again and understand it's use. Have you got any tips there?

A couple of questions - what OS is he using, is it indeed XP (sounds like it)? And has he altered his installation in any way from a base PARIS setup, like adding third-party EDS plugs?

- KHi Kerry,

He may have or more likely may not have a few of the new ones in there. I know I do.

Does that effect the StockFX.dll? I was thinking that came from the initial Paris program.

>For some reason, I'm not able to get the SPDIF working as I thought it should.
This is both with the stock studio control library and Mike's newer test
versions.

Anyway, I have a video component cable - high quality 75 ohm cable. I've
basically created a loop by hooking it from SPDIF out to SPDIF in. Cable
is 3 ft. long.

In the pathbay, I've set an external native insert on a pair of channels,
then in the patch bay hooked the inserts up to dL and dR pairs. No audio
gets passed through.

If I do the same thing with normal analog I/O, it works fine.

Ultimately, I'm trying to slave a FW410 interface to work with Reaper and
would like to use the PARIS A/D for capture, passing it back to Reaper digitally.

I'm all ears for ideas here. Thanks!

Oh yeah, this is on XP dual core Athlon64 system.

-RohdeJust to add to the mystery, I can hook up a Motif Rack to the SPDIF input
on the MEC and clock sync to it, but hooking this digital input up to channels
gives me silence as well.

With sync source set up to digital, I can play back pre-recorded material
just fine, and as soon as I disconnect the SPDIF it stops playing (as expected)
so I know electrically this input has to be working... And I did verify that
it was a good signal since the FW410 hears it good and clean.

BTW, Mike, I noticed that my ADAT card does not show up with the newest control
library, but does show up with the original. There's quite a bit on the debug
console - would that help to see what's going on?

-Rohde

As I recall you have to complete the loop into something more than just
itself.... think it was covered in the Paris Instructional Video at some
point as well if you have that, in the autotune section.....

AA

Nice to see your name come across here R dub.

any clues.

I would think, though, that coming straight from the digital inputs to a
pair of channels for strictly recording (like an external A/D or MIDI sound
module) would be pretty simple wiring - straight from the MEC's digital
inputs to the mixer's channel inputs.

More investigation...

>
>I can't explain why the input won't work in channel mode, but when using any
external insert, the loop must be completed.

That is, you need to patch both the insert send AND return before the insert will "open". (In fact, this is quite common in the "patched but not tracked talkback" situation - create a send and return loop for your talkback mic, and then delete the send patch... the return will remain patched and open, giving you a talkback on / off from the insert strip on your channel. But I digress...)

SPDIF inputs in Paris are weird, and it sometimes has to do with clock and the sequence in which your gear is powered.

Can you verify that Paris can pass its own audio through the loop? Try this:

Loop the SPDIF output to SPDIF input with a short RCA cable, as you say you've already done.

Put a piece of audio on Channel 1, MEC / 442 A

Turn on the external insert send on Mixer A Channel 1

In the patchbay, patch Mixer A Insert Send 1 (bottom row) to MEC Master dL

Output (top row)

Patch MEC Master dL Input (bottom row) to Mixer A Insert Return 1 (top row) --- now the insert should be active / "open".

Patch ANOTHER cabel from MEC Master dL Input (bottom row - same place as the previous patch) to Mixer A Channel 2.

This should route the audio from Channel 1 to Channel 2 via SPDIF. If you rec-enable Channel 2, and hit record, your audio from Channel 1 should be showing up on Channel 2.

This takes external clocking problems out of the picture, because the only clock source involved is Paris' internal clock (which should be a component of the SPDIF signal).

Let us know what this does.

The DSP power of the UAD-2 card is not effected other than the system host load get a little higher.

Wish they would hurry up and get the rest of the plug ins ported so people can get rid of the old cards.

ADK Pro Audio
(859) 635-5762
www.adkproaudio.com
chrisl@adkproaudio.com I will be in the SFO bay area
I would like to make the sale there No Shipping

I have a complete PARIS SYS
Mac G4 733 MHZ with 1 EDS1000 card & PARIS 3.0 installed
1 Mec blue face & blue face Controller 16
you need to get you own monitor
and yes it all works
Make me an offer
I am in China at the moment I will be back in the States
Nov 17th for 6 days I would like to do the deal then Good luck but you may find that it will sell
quicker if you sell it as individual
parts.

dual core Intel Mac Pro running bootcamp Win XP with a VirtuaVia Pcie to
Pci expansion kit that I put in a rackmount ATX case.

This is a 2 card system so far, soon to be 4. I've got 2 adat cards in
the mec, haven't tested those yet, but I've got Mike Audet's last

library compile installed from Sept 18th.

Anyway, there you go. Paris running on a new Mac.. yippie kai-ay mofos!
We don't need no newfangled daw! (Ok, I'll be running this as the
summing mixer of a PTHD/Logic TDM rig, but it's still pretty cool).

Thanks again Kerry for your help refreshing my brain on the setup stuff.

Cheers,

TC, you're welcome, and this really is a fantastic thing. This is the intersection of a number of significant developments unforeseen at the time of PARIS' discontinuation, and some of the things underlying the choices here represent completely new options.

1) The Intel Mac runs PARIS happily under XP. Mac users have expanded upgrade options now. They may not be options with OS9 - but they're options that let you run PARIS on a Mac (rebooting to work on tracks in OSX), and that's something. This may not be totally "news", but I'm glad to see it confirmed.

2) So far the pretty-much-brand-new VirtuaVia box seems to be a confirmed "go" - it's working so far with a two-card rig. This is, to say the least, extremely exciting considering its price point and the dwindling number of mobos with large amounts of PCI slots.

3) Mike's ADAT.dll and PCSL work will be the reason TC will be able pull this off on XP (can you actually install earlier versions of Windows on an Intel Mac? I don't know). Without Mike having defeated the various issues surrounding PARIS on XP, Torry wouldn't be, for example, heading for six ADAT cards in three MECs.

There are two take-aways from this: the first is self-evident - there have been exciting developments to date.

The second is more subtle - a feeling of a bit more *confidence* that allows one to take a couple more risks, knowing Mike's on the case.

It may be premature for a "victory lap". But if this all works when the additional components arrive - freakin' awesome. Congrats.

- KThanks Kerry, I'm just fortunate that you guys have been moving forward with all this in the last year. I didn't even think about the dual core aspect initially, but I'm glad Mike has been doing so much work on that and the multi adat card functionality to get all that running..

It's pretty exciting being able to move forward with Paris, I'll let everyone know how it goes once the full rig is built, which will probably be 4 cards, 4 mecs and 6 adat cards with additional 8i/o for 2 buss external hardware. I'll be lightpiping 48 tracks of adat from 2 digi 192 i/o cards, either recording over to paris from Logic (or PT8)

or mixing in Paris in "live" mode, I'm not sure yet.. I still have to figure out the best workflow for that.

Cheers,

TC

this is fairly significant, however, as one considering going to XP myself, wouldn't it just be easier/cheaper to build a dedicated windows XP box for Paris?

what are the advantages of doing it this Intel Mac way, other than fulfilling ones desire to work with Macs? in fact a

dedicated win XP box would save rebooting for any treatment of audio in Logic etc...

curious

>Hi Ted,

There's no advantage, except the fact that I was already running two Mac Pro's, one for Logic/Pro Tools, and the other for additional virtual instruments.

If I didn't have the 2nd one to spare, I would have just got a PC box.

So in my case it was cheaper to use what I had.

Cheers,

TC

>The only other thing to keep in mind is the shipping cost from France (I don't think it's available in the US), as well as the need for an ATX case and power supply.

I put mine in a nice rackmount atx case, and put in this additional big fan with a 3 way speed control switch. The atx case has 2 doors that open out from the front. The little fan control switch is inside the door, so I can turn the speed up or down. I also got a 600w power supply to put in the case.

Cheers,

TC

>hey,

can i get info on motherboard chip and xp drivers ...i want to update my
paris computer before the pc dies

i am looking for advice on motherboards and chips

3 card single mec system is what i use

r.d.j.I have posted Crop Circles and See it My Way for anyone that wants the original
Paris demos. After that they become cyber dust here. They are actually
very nice demos with See it my way having great vocals.

<http://www.kfocus.com/paris/demos.zip>

Get em while they last.

JohnJohn wrote:

They'll be on ParisFAQs in a bit. Anything else I should archive?

Doug

><http://www.parisfaqs.com>Hi All,

My Asrock motherboard died on Friday, and I just got PARIS back up and running on shiny new Gigabyte GA-MA790GP-DS4H with a Phenom 9350e quad core. I noticed some posts asking about current motherboards that run PARIS, so I thought I'd share. This is a 790G series motherboard, so it's got the latest AMD Phenom chipset with integrated graphics. The screen draws are noticeably faster than the Geforce 6800 they replaced. I decided to try the raid option (raid 0), and the system is fast. PARIS is in an old Magma PCI chassis with the flat ribbon cable, along with two UAD1 cards.

I had to use the new PSCL and the new ADAT driver to make it work. I'm also locking PARIS to one CPU using Tom's Hardware utility and the intafinity filter.

Hope this helps someone decide on an upgrade. one thing I did notice was that I had to install Visual Studio before my debug build of the ADAT driver

would work. If anyone ever has this problem (no one has ever reported it), let me know and I'll send you the missing file.

I'm sure that the same success could be had on an Intel MB, but I don't do Digidesign or Intel.

Cheers!

MikeKerry, you might just put up a request form, then allow a password account to access them emailing the user info. This would limit driveby downloaders and help the cause track who got what - and maybe even garner a new name for the list that doesn't come here to the NG.

>Hi everyone,

I have been a Paris user for the past 10 years...Love It!

However, I need to find a crack or key-gen for the response. My drive went down and I ghosted a new drive and put it in and sure enough I need a new response ans do not really have a week to wait. Because it is a ghost I cant do a fesh install and get the 7 day demo time back.

Does anybody have the crack for Paris 3.0???

Thanks,

Bo\$\$That's a good idea; I was thinking about contacting the copyright holders and asking them for permission to serve it - I bet they'd say it's OK, it's been out there "in the wild" for the best part of a decade anyway.

>> JohnHi All,

I found out something important about running PARIS on a multicore machine this morning.

All devices that share an IRQ with PARIS also need to be locked to the highest CPU using the intfilter driver.

I guess my new motherboard has more "stuff" on it, and one of my UAD cards now shares an IRQ with PARIS. Paris was not detecting an interface on the master card after I finished installing all my drivers. Locking the UAD cards to the highest CPU fixed it right up.

Cheers!

Mikel decided to try Windows XP SP3 on my new install. Check out what keeps coming up in the debugger over and over and over again that I never saw in SP2.

SetContentId drmRights.CopyProtect=0

So, who else thinks that Microsoft is planning their own iTunes? My guess is they're trying to lock down all Windows boxes to preemptively fight piracy for their upcoming store.

PARIS works fine for me in SP3, but if I could do it again, I'd stop with

SP2.

Mike"Fraid not.....

FWIW, MS is really deeply committed to live.com right now, I wouldn't expect
to see a ZuneTunes store.com for at least a year or more IF that is what
they are planning.

Microsoft unveils `cloud computing' product

<http://apnews.excite.com/article/20081027/D942UOPG0.html>

How original, the concept of a cloud, a place to store and host all your media, I wonder where they got that idea???

Hmmmm... looks familiar:

<http://www.apple.com/mobileme/>

It looks like MS is going to start with Amazon to sell music, maybe they will call it ZuneTunes later.

>Hi lamont,

I jumped the gun a bit in my initial excitement..

Kerry is helping me with some of the files from Mike Audet.. there were a couple of major steps I neglected during setup (like the dual core configuration and some other things), and as a result my mec i/o cards are not showing up properly.

I'm going to try and get back at it later today and I'll keep everyone posted as to how I make out. I'm pretty confident we will get this running.

Cheers,

TC

www.kfocus.com/paris/seeitmyway.zip

soon to be gone so get it now! It sounded like Ms was going to sell storage space, web based software programs, and media through Amazon. Now Microsoft says they will compete with Amazon. It will be interesting to see what Windows Azure is.

How did you remove SP3 and go back to SP2 if that's possible

Reason I ask is we're looking at a used laptop with SP3 on it and I'd like
to have the option of going to SP2

Yeah, well... Most of you who know me, know that I've been a mac user
for a few years. (I'm really an old Unix guy is what it is, and I like
BSD unix better than Linux.)

I think that MobileME has been one of the most anticipated, yet the most
bungled, products that Apple has developed. On top of the crappy web
mail interface, the increased SPAM, and all the system downtime, I
personally think that "me.com" is the most pretentious, selfish, B.S.
name for a website, and I will never use it for my email or web addresses...

How's that? :)

Doug

I thought the cloud name and concept was childish and rather insulting to the intelligence of Mac users. Apparently MS thinks the name and concept is worth copying. Lol! Once again, I think Apple is going in some wrong directions, like canning FireWire and cutting down the Power/features on the white MacBooks. In the end they will get the software straitened out, but to put out buggy crap software sure reminds me of Microsoft. I believe Mark is a "Ghost" person;-) Seriously, I believe he allways have a good, old Ghost-version ready, if some shit should happened with the computer. DosGhost and newer computers isn't a good affair, so I'm using Paragon Hard Disk Manager from <http://www.paragon-software.com/> to do the "Ghost", Partition and Defraging job.

Personally, I just haven't seen any issues with SP3 on the machines I have
chosen to install it to. I will not install it to my Paris box, that's still
at SP1 and staying there 'til it dies..
FWIW

>Hi Gantt,

Yes and no. If you manually assign the two drivers to different CPUs, the interrupts will be handled by the two different CPUs.

What I hadn't considered before staring on the Scherzo is that the driver is often called by an application, and when an application calls a driver, the driver will run on the CPU that the application is running on, regardless of interrupt affinity settings. That's why the PARIS app needs to be locked to one CPU, too.

So, if the UAD driver is set to a different CPU than PARIS, calls that PARIS makes to the UAD driver will run on the PARIS CPU, and replies made by the UAD cards will run on the UAD CPU.

I hope this helps.

:D

- KSay, are downloads available of all the other skins on that page? I only see
two options...Hey networking gurus!

I need a good supple Cat 6 cable to make patch cords out of for field work.

I have thousands of feet of install cable but it is stiff and does not stand
up well to field use. Do you know of a Cat. 6 cable that is more like a
mic
cable; strong and supple, that will hold up to onsite field use?

thanks

I'm sorry, I've been slacking. The remaining mission is to clean up the
install docs and package and post the remaining skins, but I'll get on
it - if you take an RSS feed from the Wiki it'll let you know as soon
as they're up.

Mea culpa!

- KerryDoubtful to find that bro, the CAT6 standards are harder than 5e, and it's
not going to be getting any easier as network cables are requiring more and
more standards for speed.

the other a dual core with 2gb ram.
The quad core, (studio), is even running a legit copy of OSX 10.5.4 ..I
haven't done the upgrade yet, not till I finish my current project, but I'm
assured that the auto updates from apple don't break the install.

It was setup using a boot disk (Boot-Kable-Bumby.iso) and then swapping to
the retail OSX disk for the install and back to the boot disk to finish the
install.

Lend An Ear SoundCat 5 and 6, (especially 6) are being used constantly on film sets to provide audio and video sends to various centres on set.

It's a cheap reliable way of sending analogue data, and all it needs is a fairly inexpensive convertor at each end.

Martin H

Hey John, I was just pointing out the article and passing the information on. Notice I made no comment, but I will now. I think it's a good sign that Microsoft is acknowledging the situation and that they are planning on doing something about it. I think it's great that MS is going to try to make Windows a better user experience.

>Howdy, kids.

Got the wifely an iMac, which of course includes Garageband, where I've been working up a few drum grooves. I've managed to network the iMac to my Paris PC, and have no problem transferring files back and forth wirelessly.

Now I just don't know how to convert AIFF files to Wave files that Paris can recognize. There's folks selling software to do it. Do I need to just buckle down and make the purchase?

I prefer to work in Paris, honestly. What am I missing in this effort to transfer files? Can you set Garage band to export wave files in the preferences. (I'm not a mac guy so I don't know) I use wavelab to convert from aiff to Wave. Maybe there's something else that's free that will do it. Does wavelab have a free basic version? , maybe that will do it. (just guessing)
