DAW.

I have yet to mix or track a complete song into Samplitude. Like you, I use it for mastering and cd finalization. After I finish working on this current mix project, I'll take some time to mix a multitrack project (40-50) tracks.

>Martin, I'm with you & Nappy. I like tinkering, too, but at
some stage if something gets too convoluted, you start reaching
a point of diminishing returns. DeeJ, have you considered that
part of your issue with sync/lock might be that you're going in
& out of both machines in digital? What would happen if you
switched to analog? I mean, you've got good convertors on both
ends there, so I'd hardly think signal degradation would be a
problem.

Either that or just track in Paris, export the files so you can
mix in SX (even upsample to 96k on the way in, if you must!) so
you can use all your EFX, but use four submixes out of your
Multiface analog outs, then back into your Paris box to sum in
live mode. That way you get to hit those Paris convertors one
more time, in fact. :)

Heck, with most of the stuff you do (bluegrass, folkish stuff,
etc) "clean" is good... you could live perfectly happily with
just SX & those nice clean RME convertors.

Heaven forbid! lol

I thought they had moved to that engine years ago, but I read on GS or some
where people said that it was still using the old Cubase audio engine.
I've been misinformed.
