and
or equivalent for in the slightly over \$300 range.

That'll definitely be something to consider if I end up going through dual-ASIO-driver hell on the main PC.

f I end up going
>through dual-ASIO-driver hell on the main PC.

There are ways to remotely access the other system through software and
a network connection, the KMV may not be necessary.

to A then B then C then A again on these cheap
comp speakers I definately think A sounds different then both
B & C.
I dont know if better is the word.
However, A seems more upfront and rocking.

I definately heard that A was not as detailed
as the other two, but I liked it cause it suits the music
in my opinion. Someone said "raspy" earlier.
I think that is pretty accurate.
The other two seemed to have a blanket on top of them.
Interesting results.

>DJ-

On the Pulsar web site, they make a big deal of their mixers being a significant upgrade on any of the other native DAW mixers...

"two of probably the most capable software mixers ever: the STM 48 S Surround Mixer and the 96-channel STM 4896 Recording Mixer."

FWIW

Look at Behringer web for price, you'll reconised that it not for sale in EU.I mean about V-Verb 2496.

I agree about "myth of bad quality".

Neil-

Thanks so much for posting this, it's really helpful.
One of the things I've heard repeated often over the years here is the need to mix Paris projects differently (like any piece of gear, play to its strengths). Specifically the highs need more presence.

Naive question but adding a few dbs and a stereo spreader in the treble would go a certain way towards granting your wish of combiningg the lows of C with the highs of B, wouldn't it?
Mixing stems in Paris might be a good way to attack this...
