>Hey Don,

What have you been running Paris on all these years? You know, it just occurred to me that with a nice new big fast Mac 8 core and an PCI expansion chassis you might be able to run Paris on a Mac - in Windows XP. Whaddya think? Could you actually have some of your cake and eat it too?

In the world of DJing I've grown accustomed to hearing some pretty awful singers in the pop world. Autotune effects can be better than that at least even if over used. It's an easy way out for sure. In techno it can be very cool. I am about as sick of autotune as I was about gated reverb in the 80s. It's a cool sound here and there but . . .

Want to load new skins for my paris 1.80. Tried using the instructions, but the explorer app has been renamed editor. Names have changed. DO have the wrong version to work with these bitmaps.

If this is the problem is it worth moving to 2.0 or 3.0 using win98"Gantt Kushner" <ganttmann

Then run through melodyne

hehehe'Stronger' is just a direct sample of the Daft Punk track, dissected and reworked. Definitely a vocoder more than autotune.

check these 2 SoS excerpts from recent mags for more:

Fabian Marasciullo: Flo Rida and T-Pain 'Low' :-

Asking an engineer or mixer about his use of pitch correction can be a bit like mentioning an elephant in the room, but not with an artist like T-Pain, who has made a name out of featuring Auto-Tune on his voice. "T-Pain has been using Auto-Tune for a long time, even before we met," says Marasciullo. "Since we've been working together we've created a bit of a warmer way of applying it, a more vintage-like sound if you want, as opposed to a more

digital, brittle sound. T-Pain is a very technical person and a great engineer and he'll already have applied Auto-Tune to his voice in about 50 percent of his tracks, and for the rest I'll add it. In the case of 'Low' he had already added Auto-Tune when I got the files.

"I get hundreds of emails every week to my MySpace page asking me about the AutoTune effect," he adds, and the Internet is chock-a-block with how-to-do-the-T-Pain-effect instructions. Marasciullo doesn't argue with these settings when asked whether they are correct, but stresses that "The reason the Auto-Tune sound works so special on him is because of his voice, because of the tremolo he sings with. That just seems to work magically with Auto-Tune. He also intentionally sings a little bit flat, to get Auto-Tune to grab his voice the way he wants. You still have to know what you're doing from a musical perspective to get the effect to work."

Secrets of the mix engineers: Manny Marroquin, Kanye West's Stronger

http://www.soundonsound.com/sos/dec07/articles/insidetrack_1_207.htm

(this might be under an Esub, so I hope you can read it)

point is, there are producers out there intentionally using them for the effect, not trying to recreate a realistic sound, annoying or not, lol!

Kerr.
